Ever since Malcolm James was a child, cold blooded murder has played a significant part in his life. Whether it be from both of his parents being brutally assassinated right in front of him, or having blood on his own hands, murder has been his reality. Constantly haunted and consumed by his own actions, the only thing stronger than Malcolm's thirst for blood, is his hunger for money and power! Flooding the crime ridden and gang infested inner city streets of Denver, Colorado with Cocaine and pounds of Kush, grindin, as his "Gang Green" squad of misfits commit robberies, mayhem and murder while on their way to the top. However, the sudden murder of Malcolm's friend and right hand man, not only cause the homicide rate to shoot through the roof, but also derails their mission. All while Malcolm battles with a dark secret brewing deep down inside, at which only "Tear Drop and Buds" are able to recognize and tame. Both OG's in tha game graduating to bosses of a mountain west and west coast black underworld syndicate, whom eventually put Malcolm on the payroll as a triggerman, which of course leads to more problems, money, women, and deadly consequences. Why Principle or Profit you ask? Because nine times outta ten every time a life is taken out in these streets, it's a direct result of one or the other. To profit is self explanatory; however, principle could be ones personal belief, or even a weak emotion like jealousy and greed, to killing over territory, a debt, turf, stripes, or other principles of the streets. At the end of the day we all gotta go, so

Originally published in 1981, perceptual organization had been synonymous with Gestalt psychology, and Gestalt psychology had fallen into disrepute. In the heyday of Behaviorism, the few cognitive psychologists of the time pursued Gestalt phenomena. But in 1981, Cognitive Psychology was married to Information Processing. (Some would say that it was a marriage of convenience.) After the wedding, Cognitive Psychology had come to look like a theoretically wrinkled Behaviorism; very few of the mainstream topics of Cognitive Psychology made explicit contact with Gestalt phenomena. In the background, Cognition's first love – Gestalt – was pining to regain favor. The cognitive psychologists' desire for a phenomenological and intellectual interaction with Gestalt psychology did not manifest itself in their publications, but it

did surface often enough at the Psychonomic Society meeting in 1976 for them to remark upon it in one of their conversations. This book, then, is the product of the editors' curiosity about the status of ideas at the time, first proposed by Gestalt psychologists. For two days in November 1977, they held an exhilarating symposium that was attended by some 20 people, not all of whom are represented in this volume. At the end of our symposium it was agreed that they would try, in contributions to this volume, to convey the speculative and metatheoretical ground of their research in addition to the solid data and carefully wrought theories that are the figure of their research.

Food safety and quality are primary concerns in the food manufacturing industry. Written by an author with more than 40 years' experience in the food industry, *Food Plant Sanitation: Design, Maintenance, and Good Manufacturing Practices, Third Edition* provides completely updated practical advice on all aspects of food plant sanitation and sanitation-related food safety issues. It offers readers the tools to establish a food safety system to help control microbiological, physical, and chemical hazards. Understanding that sanitation is integral to food safety is the foundation for an effective food safety system. Features of this new edition include new photographs, tables, and up-to-date material that better reflect current guidance on food plant sanitation, including additional information on the implementation of FSMA. The chapters address testing for and control of microorganisms in food manufacturing, including recent challenges in the industry due to pathogens such as *Listeria monocytogenes*. They also offer discussions on biofilms, regulatory requirements from the European Union, allergens, sanitary facility design, and describe proven best practices for sanitation as well as current sanitary requirements and regulatory changes from the FDA and USDA. In addition, the author presents methods for verifying sanitation, and provides greater differentiation of verification versus validation. The final chapters identify good manufacturing practices for employees and present a comprehensive pest management plan, including control measures and chemical interventions. The book concludes with strategies for preventing chemical and physical food safety hazards. This reference provides a practical perspective for implementing food plant sanitation and safety processes. The author has included, wherever possible, examples of procedures, forms, and documents to help

novice food safety and quality professionals develop effective food safety systems. The fight against the sexual exploitation of and trade in children has gained particular and renewed international attention in the last few years and has become one of the most important concerns in the context of international law enforcement policy and cooperation. Since 1998, policy makers have come up with new legal initiatives at global as well as regional levels in order to tackle this problem in a more effective and coordinated way. This proves that the time has come to match words and actions, and to come up with concrete and useful tools for law enforcement services and NGO's active in the areas concerned. The current study therefore examines the feasibility of the further elaboration and implementation of recommendations from a previous project (96/STOP/003) regarding the systematic gathering and administration of data concerning missing minors, minor victims of trafficking in or sexual exploitation of children and perpetrators of sexual offences against minors, with the goal to further prepare the practical setting up of several international databases with immediate relevance to the police and the prosecuting or investigating magistrates or officials, both in the EU Member States and the candidate countries. It is recommended to give Interpol a mandate to host an international database on missing persons and to create an EU monitoring centre responsible for the gathering and administration of reliable statistics and legal information on sexual exploitation of children and trafficking in human beings. It is also recommended for Interpol to host an international reference database on child pornography and to set up an analysis/intelligence child porn database at Europol. Regarding suspected and convicted sex offenders, it is proposed to create a database on pending investigations, an EU criminal records database and a database at Europol containing encoded information on both suspected and convicted offenders of sexual offences against children. Finally, it is suggested to create a European network of national DNA databases. The book also contains a summary of the conclusions in French.

Le Corbusier & Pierre Jeanneret - Restoration of the Clart é Building, Geneva

PPI Interior Construction & Detailing for Designers & Architects eText - 1 Year

Smithsonian Makers Workshop

PPI NCIDQ Interior Design Reference Manual, Seventh Edition eText - 1 Year

The book describes the story of Clarté, Le Corbusier's first apartment building, continuing the narrative into the 21st century. The steel skeleton building completed in Geneva in 1930/1932 is a prototype of the Moderne style and a precursor of the Unité d'Habitation. The building was neglected for many decades and not listed as a historic building until the 1990s. In 2007 the external envelope was repaired as the first step, followed by refurbishment of the interior, in which building preservation requirements

were taken into account in an exemplary manner. The building log book by the architects and structural engineers is illustrated with numerous new and historic drawings and photographs, and has been supplemented with an account of the building's history. The renovated building is presented in large photographs. From the country's leading couple therapist duo, a practical guide to what makes it all work. In *10 Principles for Doing Effective Couples Therapy*, two of the world's leading couple researchers and therapists give readers an inside tour of what goes on inside the consulting rooms of their practice. They have been doing couples work for decades and still find it challenging and full of learning experiences. This book distills the knowledge they've gained over their years of practice into ten principles at the core of good couples work. Each principle is illustrated with a clinically compiled case plus personal side-notes and storytelling. Topics addressed include: • You know that you need to "treat the relationship," but how are you supposed to get at something as elusive as "a relationship"? • How do you empathize with both clients if they have opposite points of view? Later on, if they end up separating does that mean you've failed? Are you only successful if you keep couples together? • Compared to an individual client, a relationship is an entirely different animal. What should you do first? What should you look for? What questions should you ask? If clients give different answers, who should you believe? • What are you supposed to do with all the emotional and personal history that your clients stir up in you? • How can you make your work research-based? No one who works with couples will want to be without the insight, guidance, and strategies offered in this book.

Food products have always been designed, but usually not consciously. Even when design has been part of the process, it has often been restricted to considerations of packaging, logos, fonts and colors. But now design is impacting more dramatically on the complex web that makes up our food supply, and beginning to make it better. Ways of thinking about design have broad applications and are becoming central to how companies compete. To succeed, food designers need to understand consumers and envision what they want, and to use technology and systems to show they can deliver what has been envisioned. They also need to understand organizations in order to make innovation happen in a corporation. The authors of this book argue that design has been grossly underestimated in the food industry. The role of design in relation to technology of every kind (materials, mechanics, ingredients, conversion, transformation, etc.) is described, discussed, challenged and put into proper perspective. The authors deftly analyze and synthesize complex concepts, inspiring new ideas and practices through real-world examples. The second part of the book emphasizes the role of innovation and how the elements described and discussed in the first parts (design, technology, business) must join forces in order to drive valuable innovation in complex organizations such as large (and not so large) food companies. Ultimately, this groundbreaking book champions the implementation of a design role in defining and executing business strategies and business processes. Not only are designers tremendously important to the present and future successes of food corporations, but they should play an active and decisive role at the executive board level of any food company that strives for greater success.

The fight against money laundering, drug trafficking, illegal immigration, cyber crime, and the promotion of the enhancement of judicial and police cooperation in criminal matters have been at the core of the G8's actions in this field since the 1990s. This book sheds light on the nature, structure and modus operandi of the G8's specific expertise on transnational organized crime from a sociological approach in order to understand the elaboration, production and diffusion of international norms and standards. It provides a detailed analysis of an under-researched aspect of international politics: the intensification of expert-level exchanges on the international stage over the enhanced cooperation against transnational organized crime that has led to an impressive elaboration of best practices and soft law recommendations. Very few studies have focused on the experts who determine these: who they are, what their socio-professional background is, and the nature and impact of their collective work in the global fight against organized crime.

My story is different, but I'm sure every small player that wanted to become a professional basketball player can relate to what I had to go through. I'm 5'7" and there are so many small basketball players that get overlooked because of their size. I want to be the voice for those players. I was blessed by God with the talent and love to be a basketball player. Through God's grace and timing, basketball has shown me parts of the world that I would've never visited and the great support that I received from my family and friends will never be forgotten or taken for granted...dream big, work for it and see what happens! Growing up in the Jennings' household during basketball season was something I loved and respected. Basketball in the morning, basketball in the evening, basketball at night, basketball in the house, basketball in the gyms, basketball at the dunk courts, basketball on television, basketball movies, basketball without a basketball, I just couldn't get enough and then it turned into a memory bank. Memories of family basketball, memories of high school basketball, memories of college basketball, memories of the NBA, memories of European basketball, memories of good games, bad games, great games, and injuries. If the good outweighs the bad you'll be happy to share your story with anyone that asks. You have to understand that a lot of people never gave me a chance. My family believed in me and I believed in myself, and I worked so hard I get chills just thinking about it. The memories don't stop until you stop. I found out very quickly that short basketball players need to be special. Looking back on it, I realized that the short players that I liked were special. Mugsy Boges was 5'3," Spud Webb was 5'7" and could dunk (he won the NBA dunk contest back in the day), Calvin Murphy was a flat out scorer, and the list goes on and on. At this present time there are only 10 basketball players under 6' that have played 3 years or more in the NBA. I felt like I was special because I played basketball on all major levels: high school, college, NBA and European professional basketball. I'm going to take you through a series of events that I believe gave me the opportunity to not only have my basketball dreams come true, but to also be able to make money doing something I love. Have you ever been to a place where you feel at peace with yourself? If you haven't, I hope you find it before your time on this earth is done. My peace is basketball. It doesn't matter what is going on in my life, I can grab a basketball, find a rim and the rim doesn't even have to have nets. I'll forget everything and just play. It's a great feeling. I believe dreams come true. Mine did and yours can too. You just need to be patient, work hard, don't listen to the negative people (haters), and believe in your own abilities. I did. I had to deal with all of those things and it shaped me to be the man that I am today.

From 23 to 26 January 2001 the incoming Belgian Presidency of the European Union organized an international conference on the strategies of the European Union and the United States in combating transnational organized crime. The conference gathered policy-makers, police and judicial authorities and other actors with a view to discussing important problems regarding the fight against organized crime. Apart from focusing on the European dimension of the subject (including Eastern Europe), the conference primarily addressed co-operation with the United States. This book collects, along with a number of plenary reports, texts that have been presented and discussed at the conference during the workshops, dealing with integrity and control on information exchange, cross-border operational activities, international/regional framework to fight organized crime, intelligence gathering in the context of peace-keeping activities, training of law enforcement authorities, integrity/corruption, drug trafficking, trafficking in human beings, money laundering and cyber crime.

House moving has recently been pushed to the forefront of preservation efforts as an alternative to demolition. When the choice becomes to either move a historically significant building away from its original physical and cultural landscape, or see history torn down and buried away in our ever-growing landfills, relocation can be the preferred option. Aggressive residential and business developments have forced preservationists, historical commissions, and concerned citizens to act by moving historic homes in an effort to save them from destruction. What is involved in moving a house? Where does one begin? Most importantly, what will it cost? Moving a House with Preservation in Mind can be used as a reference book by anyone contemplating a house move, whether historic or non-historic, as they decide whether to undertake such a

complex project. The book examines the process of moving a house step by step, from the planning stage through cost analysis, funding availability, moving options, and the physical move. A detailed case study illustrates the importance of house moving in preservation, and the final chapter provides briefer examples of several house moves across the U.S. and the various obstacles each encountered. Written by a structural engineer specializing in building relocation projects with a background and active role in historic preservation, *Moving a House with Preservation in Mind* uses clear text and insightful photographs to make technical issues easily accessible. Peter Paravalos explores a variety of move types, underscoring the important dos and don'ts that will help to make your project a success.

Exquisitely produced to reflect Dieter Rams' aesthetic philosophy, this book presents highlights from a forty-year career designing iconic consumer products that enhance our daily lives. For decades, anyone who cared about product design looked to the Braun label when choosing their appliances, radios, and other consumer items. Now Dieter Rams, the guiding force behind the Braun look, breaks down his design principles and processes in this elegant book. Enumerating each of his ten principles such as good design is innovative; good design is aesthetic; good design is useful, etc., this book presents one hundred items that embody these guidelines. Readers will find items that are familiar such as the ubiquitous coffee grinder but also those that are more unusual such as shelving systems and cigarette lighters. A fascinating essay places Dieter Rams in the context of modern design, from Bauhaus to Philip Johnson. Archival materials include photos of Rams' design team and excerpts from his publications and speeches. The book closes with a chronological overview of design icons, categorized by function, that show the enormous breadth of Rams' vision. Taken together, these images and texts offer the most comprehensive overview of Dieter Rams' work to date and will serve as both a reference and an inspiration for anyone interested in how and why good design matters.
