

175 Jahre Haendler Natermann

Presents the state-of-the-art of model-based integration of ecology and economics in the field of biodiversity conservation.

This book is the first epoch-spanning study on Jewish participation in the Italian women's movement, focussing in a transnational perspective on the experience of Italian-Jewish protagonists in Liberal Italy, during the First World War and the Fascist dictatorship until 1945. Drawing on ego-documents, contemporary journals and Jewish community archives, as well as records by the police and public authorities, it examines the tensions within the emancipation process between participation and exclusion. The book argues that the racial laws from 1938 did not represent the sudden end of an idyllic integration, but rather the climax of a long-term development. Social marginalization, the persecution of Jewish rights, and the assault on Jewish lives during fascism are analysed distinctly from the perspective of Jewish women. In spite of their significant influence on the transnational orientation of the Italian women's movement, their emancipation as women and Jews remained incomplete.

Clinical PET/MR presents the state-of-the-art of PET/MR, guiding the reader from how to scan patients, how to read and report the studies, and how keep an eye on what is clinically relevant for a patient ' s care. Each chapter starts with the clinical scenario and then moves to pertinent imaging, addressing the need of a clinical PET/MR book written by world experts in both clinical and imaging fields. It discusses the clinical application of PET/MR in diverse subspecialties such as head and neck, neurology, cardiovascular, pediatrics, chest, bone, hematology, breast, hepatobiliary pancreatic, genitourinary, gynecology, and gastrointestinal tract. This book is a valuable resource for radiologists, oncologists and members of the biomedical field who need to learn more about clinical applications of PET/MR. Presents a description of robust acquisition protocols to teach readers how to scan PET/MR patients, from tracers to sequences Provides a clinical background section in each chapter to help readers focus on the real clinical issues that need to be addressed in the medical report Written by world authorities in the field in a didactic manner to describe the real status of imaging

Zealots for souls draws attention to the impact of the Observant reforms within the Order of Preachers, and ambitiously stirs up a broad scope of questions pertaining to the institutional

narratives produced within the order between c. 1388 and 1517. Through the narratives and the forms of remembrance they fostered, the author traces the development of contemporary characteristics of the Dominican self-understanding. The book shows the fluid boundaries between the genres (order chronicles, convent chronicles, collective biographies), highlights the interplay between the narrative and the intended audience, addresses the complex question of authorship, and assesses the indebtedness of 'modern' (printed) narratives to older chronicles or biographical collections. The book demonstrates that the majority of the extant institutional narratives were written by Observant Dominicans, who strived for the internal reform of their order. They wrote history to justify their own reform agenda and therefore produced invariably partisan chronicles. The work's method is widely applicable and contributes to further reassessment of institutional narratives as sources for the analysis of religious and intellectual transformations.

This book is not meant to be a definitive exploration of the whole of the two

churches in any case. The attempt would be absurd. But the book is not meant, either, to be an intense exploration of "certain aspects" of the two churches. It is meant rather to be an extended essay about the connected differences between the two churches, to use "aspects" as touchstones for comparison. It is meant to be a comparison of two total styles. These are not architectural styles, although there is a marked and significant difference between English and Italian ecclesiastical architecture in the thirteenth century. The nonarchitectural style of the thirteenth-century Italian church might in fact be called sustained Romanesque, or perhaps sustained Burgundian. Comparing England (or Britain) with Italy in order to expose more fully one or both is not a new idea. Historians, like Tacitus and Collingwood, have made the comparison, and so have poets, like Browning and, with superb intellectuality, Clough. This is, at least locally, where angels feared to tread. The famous Venetian Anonymous wrote from the other side in his Relation (of about 1500), and condensed for us his comparison in the observation that unlike the Italians the English felt no real love, only lust. The spring bough and the melon-flower, Collingwood's city and field—the long continuity of the difference is startlingly apparent. Explaining the continuity (and perhaps there is no more difficult sort of historical explanation—its difficulty is painful to the mind) is not the job that this book sets itself. But it would be dull and dishonest to ignore

the fact that the continuity exists. All that this book has to say may be no more than that the thirteenth-century Italian church was in fact, as Browning warned, a melon-flower. The book may be only a gloss on amore. The symbol is more inclusive, more evocative, less guilty of excluding the essential but undefined, than detailed description can be. Melon-flower and amore, however, fortunately for the purpose of this book, say very little about the intricate, connected detail of administrative history. Collingwood's (after Tacitus's) city against field presses less deeply but says more. The general difference between the styles of the English and Italian churches has a great deal to do, and very directly, with the fact that the inhabitants of Italy were continually city-dwellers and the inhabitants of Britain were essentially not. Although this book is about both England and Italy, it approaches them differently. The thirteenth-century Italian church is, particularly in English and French, practically unknown. Before it can be explained or analyzed, it must be recreated, formed again in detail. The job is in part really archaeological. The outline of past existence must be uncovered. This is not at all true of the thirteenth-century English church. It has been well explored. This disparity in past observation forces my book to talk much more of Italy than of England; but, if it is a book about one church rather than the other, it is a book about England. England is meant to be seen, for a change, against what it was not. In

this sort of profile it has a different look. England may no longer seem a country in the frozen North, incapable, in the distance, of responding fully to Lateran enthusiasm. Its full response to ecclesiastical government may seem clearly connected with its, of course relatively, full response to secular government.

Concepts of historical progress or decline and the idea of a cycle of historical movement have existed in many civilizations. In spite of claims that they be transnational or even universal, periodization schemes invariably reveal specific social and cultural predispositions. Our dialogue, which brings together a Sinologist and a scholar of early modern History in Europe, considers periodization as a historical phenomenon, studying the case of the “ Renaissance. ” Understood in the tradition of J. Burckhardt, who referred back to ideas voiced by the humanists of the 14th and 15th centuries, and focusing on the particularities of humanist dialogue which informed the making of the “ Renaissance ” in Italy, our discussion highlights elements that distinguish it from other movements that have proclaimed themselves as “ r/Renaissances, ” studying, in particular, the Chinese Renaissance in the early 20th century. While disagreeing on several fundamental issues, we suggest that interdisciplinary and interregional dialogue is a format useful to addressing some of the more far-reaching questions in global history, e.g. whether and

when a periodization scheme such as “ Renaissance ” can fruitfully be applied to describe non-European experiences.

Between 1935 and 1940, the Nazis incorporated large portions of Europe into the German Reich. The contributors to this volume analyze the evolving anti-Jewish policies in the annexed territories and their impact on the Jewish population, as well as the attitudes and actions of non-Jews, Germans, and indigenous populations. They demonstrate that diverse anti-Jewish policies developed in the different territories, which in turn affected practices in other regions and even influenced Berlin's decisions. Having these systematic studies together in one volume enables a comparison - based on the most recent research - between anti-Jewish policies in the areas annexed by the Nazi state. The results of this prizewinning book call into question the common assumption that one central plan for persecution extended across Nazi-occupied Europe, shifting the focus onto differing regional German initiatives and illuminating the cooperation of indigenous institutions.

Pre-modern critical interactions of nature and society can best be studied during the so-called "Crisis of the 14th Century". While historiography has long ignored the environmental framing of historical processes and scientists have over-emphasized nature's impact on the course of human history, this volume tries to describe the at times complex modes of the late-medieval relationship of man and nature. The idea of 'teleconnection', borrowed from the geosciences, describes the influence of atmospheric circulation patterns often over long distances. It seems that there were

'teleconnections' in society, too. So this volumes aims to examine man-environment interactions mainly in the 14th century from all over Europe and beyond. It integrates contributions from different disciplines on impact, perception and reaction of environmental change and natural extreme events on late Medieval societies. For humanists from all historical disciplines it offers an approach how to integrate written and even scientific evidence on environmental change in established and new fields of historical research. For scientists it demonstrates the contributions scholars from the humanities can provide for discussion on past environmental changes.

Imaging Ellipsometry in Biotechnology

Volume 105

The pontificate of Clement VII (Giulio de' Medici) is usually regarded as amongst the most disastrous in history, and the pontiff characterized as timid, vacillating, and avaricious. It was during his years as pope (1523-34) that England broke away from the Catholic Church, and relations with the Holy Roman Emperor deteriorated to such a degree that in 1527 an Imperial army sacked Rome and imprisoned the pontiff. Given these spectacular political and military failures, it is

perhaps unsurprising that Clement has often elicited the scorn of historians, rather than balanced and dispassionate analysis. This interdisciplinary volume, the first on the subject, constitutes a major step forward in our understanding of Clement VII's pontificate. Looking beyond Clement's well-known failures, and anachronistic comparisons with more 'successful' popes, it provides a fascinating insight into one of the most pivotal periods of papal and European history. Drawing on long-neglected sources, as rich as they are abundant, the contributors address a wide variety of important aspects of Clement's pontificate, re-assessing his character, familial and personal relations, political strategies, and cultural patronage, as well as exploring broader issues including the impact of the Sack of Rome, and religious renewal and reform in the pre-Tridentine period. Taken together, the essays collected here provide the most expansive and nuanced portrayal yet offered of Clement as pope, patron, and politician. In reconsidering the politics and emphasizing the cultural vitality of the period, the collection provides fresh and much-needed revision to our understanding of Clement VII's pontificate and its critical impact on the history of the papacy and Renaissance Europe.

Kristeller Reconsidered

Die noch junge Aluminiumindustrie wurde innerhalb weniger Jahrzehnte zu einer der bedeutendsten Grundstoffindustrien. Manfred Knauer schildert die wichtigsten Phasen dieser

Entwicklung in Deutschland, beginnend mit dem Jahr 1886, in dem die Erfindung der Schmelzflusselektrolyse die Voraussetzung für die Herstellung des Aluminiums im industriellen Maßstab schuf. Die turbulenten „Jugendjahre“ der neuen Industrie bis zur Weltwirtschaftskrise werden ebenso behandelt wie Aufstieg und Fall der Aluminiumindustrie im Dritten Reich. Die „goldenen Jahre“ der Industrie in der Zeit nach dem zweiten Weltkrieg rücken in den Blick, und der Übergang in die Reifephase nach der Erdölkrise der 70er Jahre findet ebenfalls Raum. Abschließend wird die Geschichte der Aluminiumindustrie in der früheren DDR betrachtet.

Does two and two equal four? Ask someone and they should answer yes. An equation such as this seems the very definition of certainty, but is it? In this book, Helen Verran addresses precisely that question.

Ecological-Economic Modelling for Biodiversity Conservation

England and Italy in the Thirteenth Century, With an Additional Essay by the Author.

This authoritative study examines the complex system of controls that the Medici created to secure and increase their ascendancy and throws new light on the personalities and groups supporting the regime, as well as on the surviving republican opposition. This new edition incorporates the many important studies of the topic since its original publication in 1966.

The first complete biography of an influential historian whose dramatic life intersected with many great events and thinkers of the twentieth century This is the first complete biography of Ernst Kantorowicz (1895–1963), an influential German-American medieval historian whose colorful life intersected with many of the great events and thinkers of his time. Born into a wealthy Prussian-Jewish family, he fought in World War I—earning an Iron Cross and an Iron Crescent—before being sent home following an affair with a general’s mistress. Though he was an ardent German nationalist during the Weimar period, after the Nazis came to power he bravely spoke out against the regime before an overflowing crowd in Frankfurt. He narrowly avoided arrest after Kristallnacht, fleeing to England and then the United States, where he joined the faculty at Berkeley, only to be fired in 1950 for refusing to sign an anticommunist “loyalty oath.” From there, he “fell up the ladder” to Princeton’s Institute for Advanced Study, where he wrote his masterwork, *The King’s Two Bodies*. Drawing on many new sources, including numerous interviews and unpublished letters, Robert E. Lerner tells the story of a major intellectual whose life and times were as fascinating as his work.

Current Topics in Microbiology and Immunology

The volume examines imperial rule in the Middle Ages. It asks for the characteristics of imperial leadership as well as the reasons why some rulers strove for imperial titles such as emperor whereas others voluntarily shrank from them. Thus, the authors adopt a transcultural perspective, covering Europe, Byzantium and the Islamic Middle East. This fourth edition volume expands on the previous editions with new insights on important aspects to take into accounting when immobilizing enzymes and cells, illustrating outstanding examples that support those aspects, and exploring ways to fabricate and characterize heterogeneous biocatalysts including both immobilized enzymes and cells. The transformation of soluble and usually instable enzymes into heterogeneous and highly stable biocatalysts is strongly emphasized. The chapters in this book cover topics such as the importance of enzyme orientation on the support surface; application and characterization of immobilized enzymes; different functionalization chemistries for the modulation of the immobilized enzyme properties; co-immobilization of multi-enzyme systems; new analytical techniques for the characterization of heterogeneous biocatalysts; protocols for cell entrapment in alginate; preparation and characterization of biofilms; and cell encapsulation

technologies. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and authoritative, Immobilization of Enzymes and Cells: Methods and Protocols, Fourth Edition is a valuable resource for researchers interested in expanding their knowledge of this developing field.
