“A good read for
anyone who wants to

Page 1/135

understand what actually determines whether a developing economy will succeed” (Bill Gates, “Top 5 Books of the Year”). An Economist Best Book of the Year from a reporter who has spent two decades in the

region, and who The Financial Times said “should be named chief myth-buster for Asian business.” In *How Asia Works*, Joe Studwell distills his extensive research into the economies of nine countries—Japan, South Korea,

Page 3/135

Taiwan, Indonesia,
Malaysia, Thailand,
the Philippines,
Vietnam, and
China—into an
accessible, readable
narrative that
debunks Western
misconceptions,
shows what really
happened in Asia
and why, and for

Page 4/135

once makes clear why some countries have boomed while others have languished.

Studwell's in-depth analysis focuses on three main areas: land policy, manufacturing, and finance. Land reform has been essential to

Page 5/135

the success of Asian economies, giving a kick-start to development by utilizing a large workforce and providing capital for growth. With manufacturing, industrial development alone is not sufficient,

Page 6/135

Studwell argues. Instead, countries need “export discipline,” a government that forces companies to compete on the global scale. And in finance, effective regulation is essential for fostering, and

sustaining growth.
To explore all of
these subjects,
Studwell journeys
far and wide,
drawing on
fascinating examples
from a Philippine
sugar baron's
stifling of reform to
the explosive growth
at a Korean steel

mill. “Provocative . .

How do the rich get
rich? An updated
edition of the

bestseller, based on
two decades of
research (The
Washington Post).
Most of the truly
wealthy in the
United States don’t
live in Beverly Hills
or on Park Avenue.
They live next door.

Page 10/135

America's wealthy
seldom get that way
through an
inheritance or an
advanced degree.
They bargain-shop
for used cars, raise
children who don't
realize how rich
their families are,
and reject a lifestyle
of flashy

Page 11/135

exhibitionism and
competitive
spending. In fact, the
glamorous people
many of us think of
as “rich” are
actually a tiny
minority of
America’s truly
wealthy citizens—and
behave quite
differently than the

majority. At the time of its first publication, *The Millionaire Next Door* was a groundbreaking examination of America's rich—exposing for the first time the seven common qualities that appear

over and over among
this exclusive
demographic. This
edition includes a
new foreword by Dr.
Thomas J.
Stanley—updating the
original content in
the context of the
financial crash and
the twenty-first
century. “Their

countries, 'Targeting
of Transfers in
Developing
Countries' provides a
general review of
experiences with
methods used to
target interventions
in transition and
developing

Page 16/135

countries. Written for policymakers and program managers in developing countries, in donor agencies, and in NGOs who have responsibility for designing interventions that reach the poor, it conveys what

Page 17/135

targeting options are available, what results can be expected as well as information that will assist in choosing among them and in their implementation. Key messages are: -
While targeting 'works' - the median

program transfers 25 percent more to the poor than would a universal allocation - targeting performance around the world is highly variable. - Means testing, geographic targeting, and self-selection based on a work requirement

Page 19/135

are the most robustly progressive methods. Proxy means testing, community-based selection of individuals and demographic targeting to children show good results on average, but with considerable variation. -

Page 20/135

Demographic targeting to the elderly, community bidding, and self-selection based on consumption show limited potential for good targeting. - There is no single preferred method for all types of programs or all country

Page 21/135

contexts. Successful targeting depends critically on how a method is implemented. The CD-ROM includes the database of interventions, an annotated bibliography (PDF) and Spanish and Russian translations

of the book (PDFs).

American business

Page 27/135

folklore is awash with the adventures of successful entrepreneurs. Still, most of these stories are about Americans, neglecting important and courageous entrepreneurs from other countries. Made in Korea recounts the story of

how Chung Ju Yung
rose from poverty to
build one of the
world's largest and
most successful
building empires -
Hyundai - through a
combination of
creative thinking,
tenacity, timing,
political skills, and a
business strategy
that few competitors

Page 29/135

ever understood.
Chung entered the
shipbuilding
business with no
experience and
went on to create
the world's largest
shipyard. He began
making automobiles
when foreign
experts
unanimously
predicted he would

Page 30/135

fail, and he started a global construction company that has built some of today's greatest architectural wonders. He even convinced the International Olympic Committee to select South Korea over Japan as the site for the

Page 31/135

highly successful
1988 Olympics.
Unlike most CEO's
of major firms,
Chung has always
preferred the
company of his
workers to that of
the global executive
elite. Hard work,
creativity and a
capacity to never
give up - this is the

Page 32/135

essence of Chung's life. In each of his ventures, he exhibited a sheer determination to succeed, regardless of the obstacles, and he worked tirelessly to instil this drive in all of his employees. Even today, in the midst of Korea's worst

economic crisis in
over four decades,
Chung's company is
busy implementing
plans to emerge as
an even stronger
contender in the
world economy.
Illustrated with 32
pages of colour
photographs not
previously seen in
the West, including

Page 34/135

photos of Chung's recent historic visit to North Korea in 1998, Made in Korea takes stock of Chung's entire life, highlighting both his contributions to society and the lessons his work can teach to aspiring entrepreneurs.

In 1962, South Korea assembled just 1,100 new automobiles. By

Page 93/135

1996, this total had soared to 2,812,714. What explains this remarkable growth? The answer is complex, and involves a combination of a supportive State, timely

Page 94/135

technology alliances, a skilled but historically low-paid workforce, aggressive pricing, savvy entrepreneurs, and fortuitous circumstances. Despite this amazing ascent,

Page 95/135

comparatively little has been written about the Korean auto industry in English. In the first of a two-volume set, this 11-chapter book seeks to help fill this void by providing in-

It has been decades since many business schools outside India adopted the case study methodology for teaching almost all branches of management studies. This trend has been seen in India, too, where top management

institutes have implemented the case study-based methodology as an important pedagogical tool in business education. The major issue in India, however, is a severe shortage of Indian case studies through which business schools can provide

industry insights to students. This volume fills that gap. It has twenty Indian cases related to different aspects of business management. The cases cover some of the prominent disciplines of management like marketing, finance, human resource

An in-depth, hard-

the mistakes,
miscalculations and
myopia that have
doomed America ' s
automobile
industry. In the
1990s, Detroit ' s
Big Three

Page 118/135

automobile companies were riding high. The introduction of the minivan and the SUV had revitalized the industry, and it was widely believed that Detroit had miraculously overcome the threat of foreign imports and regained its ascendant position.

Page 119/135

As Micheline
Maynard makes
brilliantly clear in
THE END OF
DETROIT,
however, the
traditional American
car industry was, in
fact, headed for
disaster. Maynard
argues that by
focusing on high-
profit trucks and
SUVs, the Big

Page 120/135

Three missed a golden opportunity to win back the American car-buyer. Foreign companies like Toyota and Honda solidified their dominance in family and economy cars, gained market share in high-margin luxury cars, and, in an ironic

Page 121/135

twist, soon stormed in with their own sophisticatedly engineered and marketed SUVs, pickups and minivans. Detroit, suffering from a “good enough” syndrome and wedded to ineffective marketing gimmicks like rebates and

zero-percent financing, failed to give consumers what they really wanted—reliability, the latest technology and good design at a reasonable cost. Drawing on a wide range of interviews with industry leaders, including Toyota ' s Fujio Cho,

Page 123/135

Nissan ' s Carlos Ghosn, Chrysler ' s Dieter Zetsche, BMW ' s Helmut Panke, and GM ' s Robert Lutz, as well as car designers, engineers, test drivers and owners, Maynard presents a stark picture of the culture of arrogance and insularity that led American car

Page 124/135

manufacturers
astray. Maynard
predicts that, by the
end of the decade,
one of the American
car makers will no
longer exist in its
present form.
