Die  
Energiewende  
ist beschlossen  
und der Weg,  
hin zu  
CO2-neutralen  
Autos scheint  
klar zu sein.

*Page 1/187*

Nach wie vor  
dominieren  
Benzin- und  
Dieselfahrzeuge  
die Straßen.  
Warum dies so  
ist, zeigen die  
Marktkräfte in  
der  
zersplitterten  
Branche des  
Fahrzeugmarktes  
auf, welche

*Page 2/187*

systematisch  
analysiert und  
aufgezeigt  
werden. In  
einer Technolog  
ieanalyse  
werden  
verschiedene  
Antriebssysteme  
untersucht und  
in einer SWOT  
Analyse  
dargestellt.

*Page 3/187*

Diese zeigt auf einen Blick, wo die Vor- und Nachteile, aber auch die Stärken und Schwächen der einzelnen Antriebssysteme liegen.

Wasserstoff scheint bisher der einzige

*Page 4/187*

Energieträger  
zu sein,  
welcher  
CO<sub>2</sub>-neutral  
verbrennt und  
bei der idealen  
Verbrennung  
lediglich  
Wasser  
entstehen  
lässt. Neben  
Einsatzgebieten  
als Treibstoff

*Page 5/187*

in Fahrzeugen,  
kann  
Wasserstoff  
auch zum Heizen  
genutzt werden,  
wobei die  
bestehende Erdgas-  
technologie  
verwendet  
werden kann.  
Trotz der  
Vorteile hat  
Wasserstoff als

*Page 6/187*

Energieträger  
den Markt noch  
nicht  
durchdringen  
können. Im  
Fahrzeugmarkt  
sind bisher  
verschiedene  
Probleme im  
Bereich der  
Speicherung des  
Wasserstoffs,  
der Reichweite,

*Page 7/187*

dem  
Tankstellennetz  
und der  
Herstellkosten  
für Wasserstoff  
entstanden. Um  
die bisherigen  
Probleme mit  
Wasserstoff als  
Treibstoff in  
Fahrzeugen zu  
lösen, wurde  
die Idee

*Page 8/187*

verfolgt  
„Wasserstoff on  
Demand“ direkt  
im Fahrzeug zu  
produzieren.  
Dabei wurden  
verschiedene  
Wasserstoff Her  
stellmethoden  
untersucht,  
welche für ein  
On-Demand-  
System geeignet

*Page 9/187*

sein können. In einer Machbarkeitsanalyse wurde festgestellt, dass ein Wasserstoff-on-Demand System theoretisch funktioniert. Es ist entweder möglich, den Benzin/Dieselmotor

rauch mit  
Wasserstoff zu  
100% zu  
ersetzen, oder  
aber den Benzin  
/Dieselverbrauch  
enorm zu  
reduzieren. Bei  
beiden  
Varianten wird  
der Wasserstoff  
direkt im  
Fahrzeug

*Page 11/187*

hergestellt. In  
einem  
Fließbildschema  
wurde ein  
mögliches  
System  
dargestellt,  
wie dies in der  
Praxis zum  
Einsatz kommen  
könnte. Die  
Machbarkeit  
eines solchen

Systems muss  
mit praktischen  
Versuchen erst  
noch bestätigt  
werden. Dieses  
Buch dient, um  
Strategien für  
den  
alternativen  
Fahrzeugmarkt  
zu entwickeln,  
Technologien  
weiter zu

*Page 13/187*

analysieren,  
aber auch für  
weitere Forschungs-  
arbeiten.  
Für Entwicklung  
ingenieure  
dient dieses  
Buch, um ein El-  
ektrolysesystem  
on Demand zu  
entwickeln und  
in praktischen  
Versuchen zu

testen. Für  
Autohersteller  
besteht die  
Möglichkeit,  
mit einem H<sub>2</sub>-on-  
Demand-System  
die  
CO<sub>2</sub>-Grenzwerte  
einzuhalten und  
den CO<sub>2</sub>-Ausstoß  
Ihrer Fahrzeuge  
weiter zu  
senken.

*Page 15/187*

Governments of many countries consider the electrification of individual passenger transport as a suitable strategy to decrease oil dependency and reduce transport-related

*Page 16/187*

carbon dioxide  
(CO<sub>2</sub>) and air  
pollutant  
emissions.

However, batter  
y-electric  
vehicles (BEVs)  
and plug-in  
hybrid-electric  
vehicles  
(PHEVs) have  
been more  
expensive than

*Page 17/187*

their  
conventional  
counterparts  
and suffer from  
relatively  
short electric  
driving ranges,  
which still  
hampers the  
market  
potential of  
these vehicles.  
Despite

persisting  
shortfalls,  
mechanisms such  
as  
technological  
learning and  
economics of  
scale promise  
to improve the  
techno-economic  
performance of  
BEVs and PHEVs  
in the short-

*Page 19/187*

to mid-term.  
Here, the  
author seeks to  
obtain insight  
into the techno-  
economic  
prospects of  
BEVs and PHEVs  
by: (i)  
establishing  
experience  
curves and (ii)  
quantifying

*Page 20/187*

user costs and the costs of mitigating carbon dioxide and air pollutant emissions in a time-series analysis. The analysis captures the situation in Germany between

*Page 21/187*

2010 and 2016.  
The impact of  
humanity on the  
earth  
overshoots the  
earth's bio-  
capacity to  
supply  
humanity's  
needs, meaning  
that people are  
living off  
earth's capital

*Page 22/187*

rather than its  
income.

However, not  
all countries  
are equal and  
this book  
explores why  
apparently  
similar  
patterns of  
daily living  
can lead to  
larger and

*Page 23/187*

smaller  
environmental  
impacts. The  
contributors  
describe daily  
life in many  
different  
places in the  
world and then  
calculate the  
environmental  
impact of these  
ways of living

*Page 24/187*

from the  
perspective of  
ecological and  
carbon  
footprints.  
This leads to  
comparison and  
discussion of  
what living  
within the  
limits of the  
planet might  
mean. Current

*Page 25/187*

footprints for countries are derived from national statistics and these hide the variety of impacts made by individual people and the choices they make in their daily lives.

*Page 26/187*

This book takes a 'bottom-up' approach by calculating the footprints of daily living. The purpose is to show that small changes in behaviour now could avoid some very challenging

*Page 27/187*

problems in the future.

Offering a global perspective on the question of sustainable living, this book will be of great interest to anyone with a concern for the future, as

*Page 28/187*

well as  
students and  
researchers in  
environmental  
studies, human  
geography and  
development  
studies.

examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany, Hungary, Poland, and Slovakia from

*Page 35/187*

1989 onwards.  
Enticed by  
relatively lower-  
wage labour and  
significant  
government  
incentives, the  
world's largest  
automakers have  
launched more  
than 20 passenger  
car assembly

*Page 36/187*

complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between

*Page 37/187*

2001 and 2015,  
and alternatively in  
the CEE it  
increased by  
nearly 170%  
during this period.  
Drawing on case  
studies of 25  
current and former  
foreign-run  
assembly plants,  
the author

*Page 38/187*

presents a rare  
historical account  
of automotive  
foreign assembly  
plants in the CE  
following this  
dramatic  
geographic shift.  
This book will  
expand the  
knowledge of  
policy-makers in

This research book

*Page 43/187*

provides state-of-the-art advances in several areas of energy generation from, and environmental impact of, fuels and biofuels. It also presents novel developments in the areas of

*Page 44/187*

biofuels and products from various feedstock materials along with thermal management, emission control and environmental issues. Availability of clean and sustainable energy is of paramount

*Page 45/187*

importance in all applications of energy, power, mobility and propulsion. This book is written by internationally renowned experts from around the globe. They provide the latest innovations in

*Page 46/187*

cleaner energy utilization for a wide range of devices. The energy and environment sustainability requires a multipronged approach involving development and utilization of new

*Page 47/187*

and renewable fuels, design of fuel-flexible combustion systems and novel and environmentally friendly technologies for improved fuel use. This book serves as a good

*Page 48/187*

reference for  
practicing  
engineers,  
educators and  
research  
professionals.  
Advances in  
Carbon  
Management  
Technologies  
comprises 43  
chapters

*Page 49/187*

contributed by  
experts from all  
over the world.  
Volume 1 of the  
book, containing  
23 chapters,  
discusses the  
status of  
technologies  
capable of yielding  
substantial  
reduction of

*Page 50/187*

carbon dioxide emissions from major combustion sources. Such technologies include renewable energy sources that can replace fossil fuels and technologies to capture CO<sub>2</sub> after fossil fuel

*Page 51/187*

combustion or directly from the atmosphere, with subsequent permanent long-term storage. The introductory chapter emphasizes the gravity of the issues related to greenhouse gas

*Page 52/187*

emission global  
temperature  
correlation, the  
state of the art of  
key technologies  
and the necessary  
emission  
reductions needed  
to meet  
international  
warming targets.  
Section 1 deals

*Page 53/187*

with global challenges associated with key fossil fuel mitigation technologies, including removing CO<sub>2</sub> from the atmosphere, and emission measurements. Section 2 presents

*Page 54/187*

technological choices for coal, petroleum, and natural gas for the purpose of reducing carbon footprints associated with the utilization of such fuels. Section 3 deals with promising

*Page 55/187*

contributions of alternatives to fossil fuels, such as hydropower, nuclear, solar photovoltaics, and wind. Chapters 19 of this book is freely available as a downloadable Open Access PDF under a Creative

Our Unsustainable Life: Why We Can't Have Everything We Want With the concept of the Imperial Mode of Living, Brand and Wissen highlight the

*Page 85/187*

fact that capitalism implies uneven development as well as a constant and accelerating universalisation of a Western mode of production and living. The logic of liberal markets since the 19th Century, and especially since World War II, has

*Page 86/187*

been inscribed into everyday practices that are usually unconsciously reproduced. The authors show that they are a main driver of the ecological crisis and economic and political instability. The Imperial Mode of Living implies that people's

*Page 87/187*

everyday practices, including individual and societal orientations, as well as identities, rely heavily on the unlimited appropriation of resources; a disproportionate claim on global and local ecosystems and sinks; and cheap labour from

*Page 88/187*

elsewhere. This availability of commodities is largely organised through the world market, backed by military force and/or the asymmetric relations of forces as they have been inscribed in international institutions.

*Page 89/187*

Moreover, the Imperial Mode of Living implies asymmetrical social relations along class, gender and race within the respective countries. Here too, it is driven by the capitalist accumulation imperative, growth-oriented state

*Page 90/187*

policies and status consumption. The concrete production conditions of commodities are rendered invisible in the places where the commodities are consumed. The imperialist world order is normalized through the mode of production and living.

*Page 91/187*

This contributed volume contains the results of the research program “ Agreement for Hybrid and Electric Vehicles ” , developed in the framework of the Energy Technology Network of the International Energy Agency. The topical focus

*Page 92/187*

lies on technology options for the system optimization of hybrid and electric vehicle components and drive train configurations which enhance the energy efficiency of the vehicle. The approach to the topic is genuinely interdisciplinary,

*Page 93/187*

covering insights from fields. The target audience primarily comprises researchers and industry experts in the field of automotive engineering, but the book may also be beneficial for graduate students. A fully updated edition of a popular

This book discusses recent changes in the European legislation for exhaust emissions from motor vehicles. It starts with a comprehensive explanation of both the structure and range of applicability of new

*Page 112/187*

regulations, such as Euro 5 and Euro 6 for light-duty vehicles and Euro VI for heavy-duty vehicles. Then it introduces the most important issues in in-service conformity and conformity of production for

*Page 113/187*

vehicles, describing the latest procedures for performing exhaust emissions tests under both bench and operating conditions.

Subsequently, it reports on portable emission measurement systems (PEMS) and

*Page 114/187*

their application for assessing the emissions of gaseous and particulate matter alike, under actual operating conditions and in all transport modes. Lastly, the book presents selected findings from exhaust emissions

A systematic  
investigation of

*Page 173/187*

growth in nature and society, from tiny organisms to the trajectories of empires and civilizations.

Growth has been both an unspoken and an explicit aim of our individual and collective striving. It governs the lives of microorganisms and galaxies; it shapes the

*Page 174/187*

capabilities of our  
extraordinarily large  
brains and the fortunes  
of our economies.

Growth is manifested  
in annual increments  
of continental crust, a  
rising gross domestic  
product, a child's  
growth chart, the  
spread of cancerous  
cells. In this  
magisterial book,

*Page 175/187*

Vaclav Smil offers systematic investigation of growth in nature and society, from tiny organisms to the trajectories of empires and civilizations. Smil takes readers from bacterial invasions through animal metabolisms to megacities and the

*Page 176/187*

global economy. He begins with organisms whose mature sizes range from microscopic to enormous, looking at disease-causing microbes, the cultivation of staple crops, and human growth from infancy to adulthood. He examines the growth

*Page 177/187*

of energy conversions and man-made objects that enable economic activities—developments that have been essential to civilization. Finally, he looks at growth in complex systems, beginning with the growth of human populations and proceeding to the

growth of cities. He considers the challenges of tracing the growth of empires and civilizations, explaining that we can chart the growth of organisms across individual and evolutionary time, but that the progress of societies and economies, not so

*Page 179/187*

linear, encompasses both decline and renewal. The trajectory of modern civilization, driven by competing imperatives of material growth and biospheric limits, Smil tells us, remains uncertain.

Lemon-Aid New and Used Cars and Trucks 1990-2015 steers the

*Page 180/187*

confused and anxious buyer through the purchase of new and used vehicles unlike any other car-and-truck book on the market. "Dr. Phil," Canada's best-known automotive expert for more than 42 years, pulls no punches.

Analysing  
developments in

*Page 181/187*

digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to

with new mobility

and ensure sustainability. With contributions from specialists in the automobile sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation

*Page 184/187*

in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets,
