This book constitutes the refereed proceedings of the ACM/IFIP/USENIX 9th International Middleware Conference 2008, held in Leuven, Belgium, in December 2008. The 21 revised full papers presented were carefully reviewed and selected from 117 submissions for inclusion in the book. The papers are organized in topical sections on platforms extended to new capabilities, advanced software engineering focusing on specific system properties, system management techniques, as well as components and system algorithms and properties.

Is there a secret to successful study?The answer is 'yes'! There are some essential skills and smart strategies that will help you to improve your results at university. Using proven techniques and tips to help you focus your efforts and develop successful study skills and strategies, THE STUDY SKILLS BOOK provides practical answers to questions such as: What do lecturers expect from you in a tutorial? What's the best way to plan an essay or dissertation? Where should you concentrate your efforts for maximum impact? This book is an essential practical resource for all students who want to improve their performance and succeed in their studies: All key study skills are covered including essay writing, revision and exams, tutorials, and dissertations Practical solutions are presented for the most common problems A common-sense, no-nonsense approach is offered using practical checklists and tips This handbook has been written by experts and extensively tested on students to help you focus your efforts, troubleshoot your problems and thrive at university. "Every aspect of university life is covered - my tip to other students is to have this book on their desk and use it - (it) has been a great help", Sarah Scott, Student "This book really is a must have for any first year student!! Easy to read, intelligent and the best help a first year could ever want!", Alastair Ross, Amazon reviewer "This book really will be a godsend to you during your time at university. It's like my bible now - I'm so glad I bought it!", Fi Wordsworth, Amazon reviewer

The notion of quality of life has for several decades been well-established in ethical

debate about health care and the care of older people. *Dignity in Care for Older People* highlights the notion of dignity within the care of the elderly, focusing on the importance of theoretical concepts. Primarily based on a Research Project, *Dignity and Older Europeans*, funded by the European Commission, this book provides a thorough investigation of the concept of dignity and related concepts such as quality of life and autonomy. It includes a chapter devoted to the dignity of human embodiment, emphasizing the importance of the notion of the lived body in the context of elderly care. As a result of the conceptual study a model of dignity emerges in which four variants of dignity stand out: dignity of merit, dignity as moral status, dignity of identity and *Menschenwürde* (the specifically human value). From this follows a discussion of how these variants of dignity can be used in characterizing the care of the elderly. The notions of dignity and dignified care are discussed particularly in relation to demented persons and dying persons. The book also contains a chapter on the dignity of the dead person. International in focus, *Dignity in Care for Older People* provides a contemporary discussion of the care of older people, and will be of use to qualified nurses and social care practitioners working with older people, as well as those on ethics and gerontology courses.

This review incorporates the views and visions of 2,000 clinicians and other health and social care professionals from every NHS region in England, and has been developed in discussion with patients, carers and the general public. The changes proposed are locally-led, patient-centred and clinically driven.

Chapter 2 identifies the challenges facing the NHS in the 21st century: ever higher expectations; demand driven by demographics as people live longer; health in an age of information and connectivity; the changing nature of disease; advances in treatment; a changing health workplace. Chapter 3 outlines the proposals to deliver high quality care for patients and the public, with an emphasis on helping people to stay healthy, empowering patients, providing the most effective treatments, and keeping patients as safe as possible in healthcare environments. The importance of quality in all aspects of the NHS is

reinforced in chapter 4, and must be understood from the perspective of the patient's safety, experience in care received and the effectiveness of that care. Best practice will be widely promoted, with a central role for the National Institute for Health and Clinical Excellence (NICE) in expanding national standards. This will bring clarity to the high standards expected and quality performance will be measured and published. The review outlines the need to put frontline staff in control of this drive for quality (chapter 5), with greater freedom to use their expertise and skill and decision-making to find innovative ways to improve care for patients. Clinical and managerial leadership skills at the local level need further development, and all levels of staff will receive support through education and training (chapter 6). The review recommends the introduction of an NHS Constitution (chapter 7). The final chapter sets out the means of implementation.

This book provides the definitive account of the Roper-Logan-Tierney model of nursing, including in-depth discussion of its conceptual development, its place within the wider body of nursing theory and a critique of its application in practice. The book concludes with a wider discussion of the place of this model for nursing in the face of ongoing challenges in both nursing and health care throughout the world.

The aim of this book is to provide a comprehensive learning package in tissue viability. It covers all aspects of wound prevention and management, and considers the microbiological reasons why some wounds do not heal. It discusses factors that affect healing, pressure sore prevention and management, audit, ethics and the law. This is a comprehensive book that will enable not only nurses, but also doctors, physiotherapists and occupational therapists to develop a deeper understanding of wound care practice and research appreciation. The skin and wound healing Wound assessment Dressings and treatment Wound infection and colonisation Assessment, management and treatment of leg ulcers Nutritional assessment Surgical wounds The process of audit and research in tissue viability Pressure ulcer prevention Seating Healing and prevention of pressure ulcers Fungating wounds Ethics and the law The specialist nurse in wound management Index

Freedom to Practise

Middleware 2008

Nurses are under great pressure to improve the quality of patient care and to make their service more responsive to individual needs. The process of this change is not without its own problems and until now, little guidance has been offered to nurses on how to implement patient-centred care within current clinical practice. Drawing on some unique action research with many real life examples, 'Freedom to Practise' identifies practical strategies for making step-by-step changes and improvements to patient care irrespective of specialty.

Do your students ever struggle to grasp what exactly constitutes evidence or struggle to see how it applies to practice? Would you like them to feel more confident about critiquing evidence? The need for an evidence base for nursing practice is widely accepted. However, what constitutes evidence and how nurses might apply it to practice is not always clear. This book guides nursing students through the process of identifying, appraising and applying evidence in nursing practice. It explores a wide range differing sources of evidence and knowledge, and helps students to develop key skills of critiquing research and using evidence in clinical decision making.

This practical and accessible book examines the knowledge base, skills and attitudes required for mentoring in the context of healthcare.

Revised and updated to take account of the latest developments in healthcare, the text explores theories and research on mentoring by

analysing their strengths and weaknesses. To complement his analytical style, Neil Gopee has introduced more interactive features to emphasise the application of theories and principles to various clinical settings. He also draws on the most recent standards and competencies for mentors and supervisors, and examines how they can be applied in day-to-day mentoring and clinical practice activities. Key features include: - Comprehensive content - examines learning styles; different learning environments; evidence-based care; principles of assessment; the mentor's leadership; evaluation of teaching. - Practice-oriented - case studies offer links to 'real-life' and the chapters provide effective frameworks for mentoring in practice. - Interactive - activities and think points encourage the reader to explore and apply concepts to their practice and roles. - Up-to-date - firmly based on current knowledge in the field. Mentoring and Supervision in Healthcare is a core text for mentor preparation courses in nursing, midwifery and across the healthcare sector. It supports learning and ongoing professional development for all healthcare professionals.

EBOOK: Nursing the Acutely ill Adult: Case Book

ACM/IFIP/USENIX 9th International Middleware Conference Leuven, Belgium, December 1-5, 2008 Proceedings

The guidelines and skills required to become a nurse are always changing and it can be difficult to stay up-to-date with the current standards. This book has been specifically designed to address the main skills you need to meet NMC requirements. Becoming a Nurse will demystify what you need to know while preparing you to meet NMC standards and become a confident, practicing professional. This book is ideal for both pre-registration and practicing nurses. It is an excellent resource to prepare you for your programme or to refresh your knowledge of current NMC standards. User-friendly language describes the key NMC standards to Become a Nurse: · Personal and professional development · Professional and ethical practice · Care delivery · Care management · 17 overarching standards of the NMC. "More readable than texts on single topics such as ethics or management, it is also a better preparation for the accountability of Registration than clinically oriented books usually are. ... Would you recommend it? Resoundingly, yes."- Sue McBean, University of Ulster, THES, Feb 2010

What is reflective practice and why is it important? How do I write my first reflection? Learn how to carry out reflective practice quickly and easily with this beginner's guide for nurses. Written for nursing students and registered nurses, this book helps build confidence in writing reflectively by using clear step-by-step guidance, insightful case studies, learning activities, and by addressing commonly asked questions from nurses and nursing students. The book has three sections; the first starts with a simple model to help

students practice a first reflection and explains how to use reflection as part of assessed work at university. The second section focuses on reflecting in practice and finding the time to do it in busy work situations. The final section helps students to think more deeply about models and theories of reflection, to develop the skills they will need to pass the final year of their course. Essential reading for any nursing student new to reflective practice or registered nurse wanting to improve their reflective writing skills.

The inscriptions lioro collected aro of great interest, being catirely Jaina ; and Buch is their litoriry niorit that the study of them may be pronounced uu education in itself, for poets of repute, aiuoii whom aro named Sujanottaiusu, Arhad-dasa and Maiiga Raja, have taken jiait in their composition. They cover a very extended period, even from the remote time of Chandra Gupta, tho earliest autlicnticated date in Indian history, down to the modem year 1830. Next to the unique inscription No. 1, which introduces us to Bhadrabi'ihu and Chandra Gupta, and relates the story of the lirst settlement of the Jains at Siravana Belgoja, there is none of higher interest, whether from its stylo or from the fullness and novelty of its contents, than No. 54. And the information therein coiitained regarding the Jaina hierarchy and htcrature is well supplemented by Nos. 105, 108 and othors. For purposes of history wo have inscriptions giving us fresh details of great importance relating to tlu? rise and growth in power of the Gaiiga kings, tho death of the last of the Rashtrakutas, the establishment and expansion of the Hoysaja kingdom, the supremacy of the Vijayanagar empire, and lastly the reign of the Mysore royal house...

Healthcare, Frugal Innovation, and Professional Voluntarism

Why is care planning important? How can you use care planning effectively in your own practice? Being able to plan the care of patients is one of most important aspects of a nurse ' s role. Using an interactive approach, this book explores the reasons why care planning is so important and explains the theory behind the practice, providing a step-by-step guide to assessing patients, diagnosing problems, planning goals and interventions, and evaluating progress.

The Ombudsman investigated three cases in which local statutory supervision of midwives failed, all of which occurred at Morecambe Bay NHS Foundation Trust. The cases clearly illuminate a potential muddling of the supervisory and regulatory role of supervisors of midwives. The current

arrangements do not always allow information about poor care to be escalated effectively into hospital clinical governance or the regulatory system. This means the current system operates in a way that risks failure to learn from mistakes, which cannot be in the interests of the safety of mothers and babies and must change. Working with the Nursing and Midwifery Council (NMC), the Professional Standards Authority for Health and Social Care, NHS England and the Department of Health, the Ombudsman has identified two key principles that will form the basis of proposals to change the system of midwifery regulation: that midwifery supervision and regulation should be separated; that the NMC should be in direct control of regulatory activity. The Department of Health should convey these recommendations to its counterparts in Northern Ireland, Scotland and Wales and develop proposals to put these principles into effect.

The World Health Organization has developed these Nurse Educator Core Competencies to enable educators to effectively contribute to the attainment of high quality education, and the production of effective, efficient and skilled nurses who are able to respond to the health needs of the populations they serve. This will enable the attainment of objectives one and two of the Global strategy on human resources for health: Workforce 2030 and is also a priority in the updated Global strategic directions on nursing and midwifery 2016-2020. The aim of this publication is to provide a clear outline of Nurse Educator Core Competencies and performance expectations, which can form the basis for developing a competence-based curriculum encompassing the cognitive, affective and psychomotor skills and behaviors expected of nurse teachers. The competencies are intended to help guide the educational preparation of nurse teachers; ensure educational quality and accountability; and, ultimately, contribute to improving the provision of nursing care and outcomes of health services. Much effort has gone into the preparation of the Nurse Educator Core Competencies. It is the aim of the World Health Organization that they will facilitate nurse educators to attain increased proficiency in assisting student nurses to acquire all the knowledge, skills and attitudes necessary to practice nursing effectively in the 21st century.

'While emphasising caring for others, this book also place great importance on the practitioner caring for and developing themselves. Contemporary care environments place high demands upon students and practitioners of all disciplines. We want practitioners to do more than simply survive these environments, we want practitioners to thrive and feel enabled to lead themselves and others.' John Hurley and Paul Linsley, in the Preface Emotional intelligence is centred in self-awareness, empathy and leadership, as well as communication, relatedness and personal resilience. This book adopts a fresh approach to personal and professional development in healthcare by applying emotional intelligence to a range of clinical and educational contexts..This practical, user-friendly guide engages the reader on both an emotional and a cognitive level, offering an energising way for healthcare professionals to work more effectively as individuals and as part of a team. The activities provided are thought-provoking for personal study and ideal for session planning in larger groups. Emotional Intelligence in Health and Social Care is recommended for all educators and students of medicine, nursing, social care and the Allied Health Professions. When I began my professional training over forty years ago the curriculum paid no attention to the 'stuff' of the 'emotions'. However, when faced with the confusion of real people, and the uncertainty of

decision making, I - like everyone else - had to draw on my emotions; feeling my way towards a different kind of knowledge. A book like this might have helped me come to a different understanding of what I needed to do to help myself to coexist with, work alongside and help others. From the Foreword by Phil Barker Endorsed by the Australian College of Critical Care Nurses (ACCCN) ACCCN is the peak professional organisation representing critical care nurses in Australia Written by leading critical care nursing clinicians, Leanne Aitken, Andrea Marshall and Wendy Chaboyer, the 4th edition of Critical Care Nursing continues to encourage and challenge critical care nurses and students to develop world-class practice and ensure the delivery of the highest quality care. The text addresses all aspects of critical care nursing and is divided into three sections: scope of practice, core components and specialty practice, providing the most recent research, data, procedures and guidelines from expert local and international critical care nursing academics and clinicians. Alongside its strong focus on critical care nursing practice within Australia and New Zealand, the 4th edition brings a stronger emphasis on international practice and expertise to ensure students and clinicians have access to the most contemporary practice insights from around the world. Increased emphasis on practice tips to help nurses care for patients within critical care Updated case studies, research vignettes and learning activities to support further learning Highlights the role of the critical care nurse within a multidisciplinary environment and how they work together Additional resources on Evolve An eBook on VitalSource Instructor resources Case Study suggested responses Learning Activity suggested responses Additional Case Study answers Image collection, including tables Student resources Additional Case Studies Weblinks Increased global considerations relevant to international context of critical care nursing alongside its key focus within the ANZ context Aligned to update NMBA RN Standards for Practice and NSQHS Standards An eBook included in all print purchases

A high percentage of patients with dementia experience debilitating pain. Untreated, it can result in mental and physical impairment; a higher frequency of neuropsychiatric symptoms such as agitation, depression, and sleep problems; and adverse events such as falls, hallucination, and even death. With the help of Pain in Dementia, you can learn new ways to give these patients a better quality of life! A multidisciplinary team of leading experts navigates the complex clinical challenges associated with pain among these patients. They identify the sources of pain, even in patients who have trouble communicating, and recommend the most effective pain treatment options.

The second edition of the successful and definitive nursing textbook, Nursing Practice is designed to support the student throughout the entire nursing degree. Structured around the latest Nursing and Midwifery Council Code of Conduct, it explores a range of clinical and professional issues that the student will need to know, in one complete and accessible volume. Thoroughly updated and with full-colour, high quality illustrations throughout, this new edition features an additional chapter on the principles of supporting families and carers in practice, advice on revalidation, as well as a number of learning features and activities to help consolidate learning. Nursing Practice provides invaluable information to enable not just student nurses, but also those who are qualified and members of the extended nursing family, to develop a deeper understanding of their patients' needs and to ensure that they are practicing safely and effectively.

"Nursing the Acutely ill Adult is a comprehensive text ... Each chapter draws on the clinical and academic expertise of the author and follows a

structured approach that explores the case problems, altered physiology and nursing interventions and care. It is an ideal reference resource for nurses who wish to reflect and explore the evidence base underpinning the complexities of nursing acutely ill adults." Alison Eddleston, Senior Lecturer Acute, Operative and Critical Care, School of Health, University of Central Lancashire, UK "This informative case-based book encourages the reader to critically consider the assessment and care needed by acutely ill adult patients with a variety of underlying conditions. Nursing and other healthcare students . . . should find that the book helps with the development of an integrated mindset and evidence-based decision making." Janice Christie, Senior Lecturer in Public Health and Primary Care, City University London, UK "The book will enable practitioners to approach the assessment of patients with a range of acute conditions in a structured manner. The case scenarios are very realistic and there are good explanations of underlying patho-physiology. There is also a well structured explanation of investigations and priority interventions . . . This book will enable the development of expertise in assessment and prioritising of care in a range of settings." Laurence Leonard, Senior Lecturer, Kingston University and St George's, University of London, UK The complexity of caring for patients who become acutely ill or have deteriorated can be a daunting challenge for nurses. Part of a case book series, this accessible book contains 17 in-depth case studies relating to care of the acutely ill adult. The cases combine pathophysiology, pharmacology and nursing care in realistic clinical settings, providing an engaging resource for nursing students taking acute care modules. This handy book: Follows a step-by-step question and answer format Facilitates the application of theory to practice through the use of clinical case studies Considers the most common acute illness scenarios that are frequently encountered by practitioners Integrates knowledge of pathological processes, applied pharmacology and related nursing implications to acute illness Nursing the Acutely Ill Adult: Case Book offers a unique way of relating theory to practice, making it key reading for undergraduate nursing students. It will also be beneficial to students in areas such as intensive care as well as nurse educators looking for a way to bridge the gap between the classroom and clinical practice. Contributors: Patrick Gallagher, Niall McKenna, Billie Joan Rice.

This essential guide comprises a nine-part series describing the Principles of Nursing Practice developed by the Royal College of nursing in collaboration with patient and service organisations, the Department of Health, the Nursing and Midwifery Council, nurses and other healthcare professionals.

EBOOK: Communication Skills For Adult Nurses

Nursing Practice

Fundamentals Of Nursing

Beginner's Guide to Reflective Practice in Nursing

Becoming a Nurse

NHS Next Stage Review Final Report

Supporting students poses a significant challenge for nurse mentors and other healthcare professionals in today's world of practice. Recent concerns over the fitness to practice of nursing students at the point of registration and the move to all-graduate pre-registration programmes require new approaches to practice learning and mentoring the nurse of the future. The book offers clear practical advice on how to acquire and develop mentorship skills to support degree-level nursing students. It has been fully updated to include more detailed advice on what to do when a student is

failing, how to approach assessment and provides more examples of mentoring in community placements. This book is a comprehensive and affordable guide suitable for all nurses, midwives and health professionals undertaking a mentorship course to support nursing students. Nine contributions from academics and clinicians examine the various roles of the mental health nurse in relation to clients and colleagues and within the context of the health care organization. Following an historical overview of mental health nursing, individual chapters discuss the skills nurses need to fulfill their roles as assessors, educators, therapists, reflectors, managers, supervisors, researchers, and clinicians. Distributed in the US by ISBS. c. Book News Inc.

The new edition of Nursing Care Planning Made Incredibly Easy is the resource every student needs to master the art of care planning, including concept mapping. Starting with a review of the nursing process, this comprehensive resource provides the foundations needed to write practical, effective care plans for patients. It takes a step-by-step approach to the care planning process and builds the critical thinking skills needed to individualize care in the clinical setting. Special tips and information sections included throughout the book help students incorporate evidence-based standards and rationales into their nursing interventions.

Professional Values in Nursing

This public inquiry report into serious failings in healthcare that took place at the Mid Staffordshire NHS Foundation Trust builds on the first independent report published in February 2010 (ISBN 9780102964394). It further examines the suffering of patients caused by failures by the Trust: there was a failure to listen to its patients and staff or ensure correction of deficiencies. There was also a failure to tackle the insidious negative culture involving poor standards and a disengagement from managerial and leadership responsibilities. These failures are in part a consequence of allowing a focus on reaching national access targets, achieving financial balance and seeking foundation trust status at the cost of delivering acceptable care standards. Further, the checks and balances that operate within the NHS system should have prevented the serious systemic failure that developed at Mid Staffs. The system failed in its primary duty to protect patients and maintain confidence in the healthcare system. This report identifies numerous warning signs that could and should have alerted the system to problems developing at the Trust. It also sets out 290 recommendations grouped around: (i) putting the patient first; (ii) developing a set of fundamental standards, easily understood and accepted by patients; (iii) providing professionally endorsed and evidence-based means of compliance of standards that are understood and adopted by staff; (iv) ensuring openness, transparency and candour throughout system; (v) policing of these standards by the healthcare regulator; (vi) making all those who provide care for patients, properly accountable; (vii) enhancing recruitment, education, training and support of all key contributors to the provision of healthcare; (viii) developing and sharing

ever improving means of measuring and understanding the performance of individual professionals, teams, units and provider organisations for the patients, the public, and other stakeholders.

This book investigates what international placements of healthcare employees in low resource settings add to the UK workforce and the efficacy of its national health system. The authors present empirical data collected from a volunteer deployment project in Uganda focused on reducing maternal and new-born mortality and discuss the learning and experiential outcomes for UK health care professionals acting as long term volunteers in low resource settings. They also develop a model for structured placement that offers optimal learning and experiential outcomes and minimizes risk, while shedding new light on the role that international placements play as part of continuing professional development both in the UK and in other sending countries. This work was published by Saint Philip Street Press pursuant to a Creative Commons license permitting commercial use. All rights not granted by the work's license are retained by the author or authors.

This practical guide explores professional values in nursing, helping you to develop safe, compassionate, dignified, person-centred and evidence-based nursing practice. The emphasis of the book is on fundamental values of equality, dignity and caring. The authors discuss holistic nursing care, working in partnership with people and families, working collaboratively with the interprofessional team, vulnerability and safeguarding, challenging poor practice and promoting best practice. Features: Chapters linked to the Professional Values domain in the NMC Standards for pre-registration nursing education Strong evidence base to ensure best practice Accessible style with learning outcomes, practice scenarios, questions and activities Relevant to all fields of nursing, with practice scenarios representing people across the lifespan and with different healthcare needs Professional Values in Nursing is a valuable resource for all nursing students, helping to embed professional values in their everyday practice.

This is the first practical guide for nurses on how to incorporate the knowledge, skills, and tools of Strength-Based Nursing Care (SBC) into everyday practice. The text, based on a model developed by the McGill University Nursing Program, signifies a paradigm shift from a deficit-based model to one that focuses on individual, family, and community strengths as a cornerstone of effective nursing care. The book develops the theoretical foundations underlying SBC, promotes the acquisition of fundamental skills needed for SBC practice, and offers specific strategies, techniques, and tools for identifying strengths and harnessing them to facilitate healing and health. The testimony of 46 nurses demonstrates how SBC can be effectively used in multiple settings across the lifespan.

In the highly popular MACS-Lift Short-Scar Rhytidectomy, Drs. Patrick Tonnard and Alexis Verpaele introduced surgeons to an exciting new concept in facial rejuvenation—one that offered shorter incisions, minimal morbidity, and reduced recovery time. In this companion volume, Short-Scar Face Lift: Operative Strategies and Techniques, Drs. Tonnard and Verpaele build on that foundation and expand their scope. The book is organized into two sections. Part I, Short-Scar Face-Lift Techniques, discusses indications, applications, and alternate short-scar face-lift techniques. The editors elaborate on the different aspects of the MACS-lift and short-scar face-lifting. They review the important lessons they have learned during years of experience with the MACS-lift, including a discussion of complications, problems, limitations, and technical tips and tricks. They are joined by Dr. Foad Nahai, who discusses technical considerations; Dr. Joseph Hunstad, who provides a systematic step-by-step guide to his approach; Dr. Mark Jewell, who describes the biomechanics of the MACS-lift and offers technical tips for success; and Dr. Daniel Baker, who describes his personal lateral SMASectomy short-scar face-lift technique and compares it to other comparable and convergent techniques. Part II focuses on Combined Approaches and Ancillary Treatments for facial rejuvenation. In this section, Dr. Daniel Labb discusses the anatomic basis of minimally invasive neck correction through a short scar and Dr. Alain Fogli details his simple, safe technique for temporal lifting. Finally, Dr. Thomas Roberts brings all of these techniques and treatments into perspective through his analysis of the volumetric concept of facial rejuvenation. He provides an in-depth discussion of facial fat micrografting and describes how the synergistic use of multiple surgical and nonsurgical modalities can lead to superior results. With beautiful, four-color illustrations, numerous case examples, and an accompanying DVD with operative videos, this book provides the ultimate surgical instruction that will allow surgeons to incorporate this procedure into their practice.

"This book is a real gem - useful not only for nurses, but for all healthcare professionals, students and educators wanting to develop their communication skills. One is reminded that it is not always about 'what' is said, but 'how' it is said. This book will be a great resource for those advocating interprofessional working, while keeping the patient's perspective in the reader's mind throughout." Dr Susanne Lindqvist, Senior Lecturer in Interprofessional Education, University of East Anglia, Norwich, UK. "This book is slim line and concise but covers a lot of vital points that all nurses and students of nursing should be aware of. It is well laid out with activities, case studies and vignettes to illustrate key issues... I thoroughly recommend this book to nursing students and those who work with people in any context." Jo Parham, third year adult nursing student at the University of the West of England. "From a Nursing Student perspective this book is excellent. It deals with every aspect of communication from the fundamental skills, through the use of technology, challenging situations, communication in teams, to the legal and ethical aspects of communication." Conor Hamilton, Nursing student. Queens University, Belfast. An essential guide for all nurses!! With an emphasis on practical application, this lively and accessible guide will help nurses to hone and develop their communication skills. Full of examples from both a patient and a nurse perspective, the book covers: Barriers to communication Communication in teams The patient's perspective Making good use of email and phone Managing difficult conversations How good communication underpins the essence of care Examples of both good and poor practice, taken from the real-life experiences of

the authors, are included to encourage reflection and integration of theory and practice. The book includes common scenarios, activity points and suggestions for practice, to give nurses the tools to continue to develop and apply effective communication skills.

Communication Skills for Adult Nurses will support both student nurses learning their craft and also offer a suitable handy reference for qualified nurses undertaking continuing professional development, or acting as mentors. Contributors: Bernard Anderson, Jayne Crow, Graham Harris, Vivian Jellis, Mary Northrop, Paula Sobiechowska, Jill Toocaram
