A NEW YORK TIMES TOP BOOK OF 2015 WASHINGTON POST NOTABLE BOOK The author of *Red Sorghum* and China's most revered and controversial novelist returns with his first major publication since winning the Nobel Prize. In 2012, the Nobel committee confirmed Mo Yan's position as one of the greatest and most important writers of our time. In his much-anticipated new novel, Mo Yan chronicles the sweeping history of modern China through the lens of the nation's controversial one-child policy. *Frog* opens with a playwright nicknamed Tadpole who plans to write about his aunt. In her youth, Gugu—the beautiful daughter of a famous doctor and staunch Communist—is revered for her skill as a midwife. But when her lover defects, Gugu's own loyalty to the Party is questioned. She decides to prove her allegiance by strictly enforcing the one-child policy, keeping tabs on the number of children in the village, and performing abortions on women as many as eight months pregnant. In sharply personal prose, Mo Yan depicts a world of desperate families, illegal surrogates, forced abortions, and the guilt of those who must enforce the policy. At once illuminating and devastating, it shines a light into the heart of communist China.

Describes the physical characteristics, behavior, life cycle, and natural environment of the many species of beetles.

Wendy Pfeffer describes the amazing metamorphosis from tiny, jellylike egg, to little fishy tadpole, to great big bullfrog. Holly Keller has created the archetypal frog pond and we see it through the seasons as the tadpoles grow legs and lungs and eventually hop onto land: bullfrogs at last. "Well-designed ink drawings washed with soft-toned watercolors stretch across the double-page spreads, showing the action above and below water level. . . . an attractive, general introduction."—BL. 1994 "Pick of the Lists" (ABA) Best Children's Science Books, 1994 (Science Books and Films)

Some bird life cycles involve migration. The book focuses on the various stages and explains: differences in the length of time birds incubate their eggs and care for their young; the development of a chicken embryo and how a chick hatches; dangers to nesting habitats, the effects of pollution, and how these affect the life cycle of birds.
