

A Reessment Of Enterprise Architecture Implementation

How does the organization define, manage, and improve its Enterprise Architecture processes? Does Enterprise Architecture systematically track and analyze outcomes for accountability and quality improvement? How do we Identify specific Enterprise Architecture investment and emerging trends? What should the next improvement project be that is related to Enterprise Architecture? How can skill-level changes improve Enterprise Architecture? Defining, designing, creating, and implementing a process to solve a business challenge or meet a business objective is the most valuable role... In EVERY company, organization and department. Unless you are talking a one-time, single-use project within a business, there should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?' For more than twenty years, The Art of Service's Self-Assessments empower people who can do just that - whether their title is marketer, entrepreneur, manager, salesperson, consultant, business process manager, executive assistant, IT Manager, CxO etc... - they are the people who rule the future. They are people who watch the process as it happens, and ask the right questions to make the process work better. This book is for managers, advisors, consultants, specialists, professionals and anyone interested in Enterprise Architecture assessment. Featuring 375 new and updated case-based questions, organized into seven core areas of process design, this Self-Assessment will help you identify areas in which Enterprise Architecture improvements can be made. In using the questions you will be better able to: - diagnose Enterprise Architecture projects, initiatives, organizations, businesses and processes using accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in Enterprise Architecture and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the Enterprise Architecture Index, you will develop a clear picture of which Enterprise Architecture areas need attention. Included with your purchase of the book is the Enterprise Architecture Self-Assessment downloadable resource, containing all questions and Self-Assessment areas of this book. This enables ease of (re-)use and enables you to import the questions in your preferred management tool. Access instructions can be found in the book. You are free to use the Self-Assessment contents in your presentations and materials for customers without asking us - we are here to help. This Self-Assessment has been approved by The Art of Service as part of a lifelong learning and Self-Assessment program and as a component of maintenance of certification. Optional other Self-Assessments are available. For more information, visit <http://theartofservice.com>

What potential environmental factors impact the Enterprise Architecture Metrics effort? To what extent does management recognize Enterprise Architecture Metrics as a tool to increase the results? Does your organization need more Enterprise Architecture Metrics education? Among the Enterprise Architecture Metrics product and service cost to be estimated, which is considered hardest to estimate? What tools and technologies are needed for a custom Enterprise Architecture Metrics project? This amazing Enterprise Architecture Metrics self-assessment will make you the reliable Enterprise Architecture Metrics domain visionary by revealing just what you need to know to be fluent and ready for any Enterprise Architecture Metrics challenge. How do I reduce the effort in the Enterprise Architecture Metrics work to be done to get problems solved? How can I ensure that plans of action include every Enterprise Architecture Metrics task and that every Enterprise Architecture Metrics outcome is in place? How will I save time investigating strategic and tactical options and ensuring Enterprise Architecture Metrics costs are low? How can I deliver tailored Enterprise Architecture Metrics advice instantly with structured going-forward plans? The popularity of enterprise architecture (EA) has increased in the last two decades, in both business and academic domains. Despite the cumulative interest from all sectors, the implementation and practice of EA have been entangled with numerous challenges and complexities. Consequently, some organisations continue to theorise the concept, which has ramifications on practice and return on investment (ROI). This has led to many studies that have been conducted, to understand the complexities impacting the implementation and practice of EA in organisations. Yet, the trajectory of some convolutions remains mystery in many quarters. This attributes to the struggle to articulate the value of EA in many environments. Hence many organisations find it difficult to apply EA for strategic management of modern information technology (IT) solutions. Enterprise Architecture for Strategic Management of Modern IT Solutions provides guidance on how to employ EA in deploying and managing IT solutions from pragmatic and implementable strategies ' perspectives. Until now, implementation and practice of EA have been slow, despite its growing popularity and interest from all sectors. The author employs sociotechnical theories such as actor-network theory (ANT) and structuration theory (ST) as lenses to examine and explain why and how challenges and complexities exist and derail the implementation or practice of EA in organisations. By doing so, this serves to enable practitioners and readers to gain fresh insights on why the challenges exist and how they can be addressed in creating collaborative capabilities for business enhancement, sustainability, and competitiveness. The book provides detailed insights on how to apply EA for organisational purposes, from three main fronts. First, it explains the implications that lack of understanding of EA have on organisational activities and processes. Second, it examines the challenges and complexities that hinder the implementation and practice of EA in organisations. Third, it proposes models and frameworks on how EA can be applied for strategic management of modern IT solutions in organisations. Written for postgraduates, researchers, academics, and professionals in the fields of EA, IT, and information systems, this book provides a valuable resource that will enable and enhance implementation and practice of EA including future studies.

Can we do Enterprise Architecture EA Tools without complex (expensive) analysis? Who is responsible for ensuring appropriate resources (time, people and money) are allocated to Enterprise Architecture EA Tools? What are the rough order estimates on cost savings/opportunities that Enterprise Architecture EA Tools brings? What key business process output measure(s) does Enterprise Architecture EA Tools leverage and how? Will new equipment/products be required to facilitate Enterprise Architecture EA Tools delivery for example is new software needed? Defining, designing, creating, and implementing a process to solve a challenge or meet an objective is the most valuable role... In EVERY group, company, organization and department. "This book addresses the gap in current literature in terms of linking and understanding the relationship between e-government and government enterprise architecture"--Provided by publisher.

From the beginning of my professional work as a researcher and consultant in the area of enterprise architectures I found that enterprises are facing new challenges to maintain and improve their market-share and their competitiveness. These new challenges mean that they have to respond in a more agile and precisely way to new customer requirements. These customer requirements have to be identified with no doubts by answering questions like where, when, how and what needs are needed to be satisfied in an enterprises by focusing in their expertise in order to adapt their business processes to be able to respond to the customer requirements. According with Professor Williams (Williams, 1996) architectures can be of either two types. Type I presents a pictorial description or model of the physical organization or structure and Type II describes or models the steps of the process of development of enterprise integration. Actual research in heading to define the content and the structure of any organization, in terms of architecture structure (Type II), content, definitions and other aspects that define what is an enterprise. With the knowledge developed on Enterprise Architecture (Type II) no more questions will come from the people in charge of defining the business processes in terms of what to model and how to model in an enterprise. This knowledge is known as "Enterprise Architecture and Methodology" and is already defined as an ISO standard (ISO 15704, ISO 19439 & ISO 19440). So this thesis is using the ISO standard to structure a serial of matrices that will help an enterprise and their stakeholders and practitioners to find out what is missing in its enterprise model. The thesis does not intent to say what aspects are better to fulfill in a specific enterprise mission, but to establish that lacks that contain the aspects that are weaknesses to obtain the enterprise performance and competitiveness. The reader will find a complete methodology to perform an assessment and discover those weaknesses in its enterprise model. Also it will find a study case that will give an example of what to expect from the assessment proposed. But remember it is not the intention to give guidelines of what to improve to fulfill an enterprise mission, just to show the gaps in a particular enterprise model against the standard.

In using the questions you will be better able to: - diagnose Enterprise Architecture Process projects, initiatives, organizations, businesses and processes using accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in Enterprise Architecture Process and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the Enterprise Architecture Process Scorecard, you will develop a clear picture of which Enterprise Architecture Process areas need attention. Your purchase includes access details to the Enterprise Architecture Process self-assessment dashboard download which gives you your dynamically prioritized projects-ready tool and shows your organization exactly what to do next. You will receive the following contents with New and Updated specific criteria: - The latest quick edition of the book in PDF - The latest complete edition of the book in PDF, which criteria correspond to the criteria in... - The Self-Assessment Excel Dashboard - Example pre-filled Self-Assessment Excel Dashboard to get familiar with results generation - In-depth and specific Enterprise Architecture Process Checklists - Project management checklists and templates to assist with implementation INCLUDES LIFETIME SELF ASSESSMENT UPDATES Every self assessment comes with Lifetime Updates and Lifetime Free Updated Books. Lifetime Updates is an industry-first feature which allows you to receive verified self assessment updates, ensuring you always have the most accurate information at your fingertips.

Enterprise Architecture (EA) has evolved to become a prominent presence in today's information systems and technology landscape. The EA discipline is rich in frameworks, methodologies, and the like. However, the question of 'value' for business ;professionals remains largely unanswered - that is, how best can Enterprise Architecture and Enterprise Architects deliver value to the enterprise? Enterprise Architecture for Business Success answers this question. Enterprise Architecture for Business Success is primarily intended for IT professionals working in the area of Enterprise Architecture. The eBook gives practical insights into what constitutes EA and how it might be practiced in a typical resource constrained business environment. The contents of the eBook include a brief guideline about EA systems and terminology, followed by notes on how to design enterprise systems in line with business strategies. The eBook also presents case studies which help to demonstrate the distance between theory and reality when it comes to optimizing IT infrastructure for successfully achieving business goals. Lengthy theoretical discussions are avoided in favor of focusing more on the practice and tools of EA. Readers will find value in this eBook, whether they are an IT consultant or a manager, an EA team lead or member, or just someone keen to learn about real-world EA.

Master's Thesis from the year 2020 in the subject Computer Science - IT-Security, grade: 1.0, Free University of Berlin, language: English, abstract: The complexity of enterprise architectures and the associated IT security risks are constantly increasing. Traditional approaches to IT risk management operate in silos and make it difficult to obtain a company-wide view of existing threats. The objective of this thesis is to develop an assessment framework that enables an automated comprehensive view of existing IT security risks within the enterprise architecture. For this purpose, concepts of IT risk management are extended with principles of enterprise architecture management. Based on a research approach according to the design science research paradigm, an artifact, the so-called Enterprise Architecture Management Risk Assessment (ERA) framework, will be developed based on a problem analysis and requirements gathering from practice and science. The ERA framework will be prototypically implemented and evaluated as a dashboard solution in a case study with a German bank. The evaluation will take place in two iterations, qualitative by means of expert interviews and quantitative by means of a survey. The evaluation of the ERA framework artifact and its prototypical dashboard implementation confirms its usefulness, usability and non-triviality. Furthermore, possible extension and improvement possibilities of the artifact are disclosed. The designed evaluation framework contributes to research at the interface of IT security and enterprise architecture management as well as to the solution of a practical relevant problem.

Are we making progress? and are we making progress as Collaborative Enterprise Architecture leaders? How can we improve Collaborative Enterprise Architecture? What will drive Collaborative Enterprise Architecture change? Are assumptions made in Collaborative Enterprise Architecture stated explicitly? Does the Collaborative Enterprise Architecture task fit the client's priorities? Defining, designing, creating, and implementing a process to solve a business challenge or meet a business objective is the most valuable role... In EVERY company, organization and department. Unless you are talking a one-time, single-use project within a business, there should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?' For more than twenty years, The Art of Service's Self-Assessments empower people who can do just that - whether their title is marketer, entrepreneur, manager, salesperson, consultant, business process manager, executive assistant, IT Manager, CxO etc... - they are the people who rule the future. They are people who watch the process as it happens, and ask the right questions to make the process work better. This book is for managers, advisors, consultants, specialists, professionals and anyone interested in Collaborative Enterprise Architecture assessment. All the tools you need to an in-depth Collaborative Enterprise Architecture Self-Assessment. Featuring 617 new and updated case-based questions, organized into seven core areas of process design, this Self-Assessment will help you identify areas in which Collaborative Enterprise Architecture improvements can be made. In using the questions you will be better able to: - diagnose Collaborative Enterprise Architecture projects, initiatives, organizations, businesses and processes using accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in Collaborative Enterprise Architecture and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the Collaborative Enterprise Architecture Scorecard, you will develop a clear picture of which Collaborative Enterprise Architecture areas need attention. Included with your purchase of the book is the Collaborative Enterprise Architecture Self-Assessment downloadable resource, which contains all questions and Self-Assessment areas of this book in a ready to use Excel dashboard, including the self-assessment, graphic insights, and project planning automation - all with examples to get you started with the assessment right away. Access instructions can be found in the book. You are free to use the Self-Assessment contents in your presentations and materials for customers without asking us - we are here to help.

Federal Enterprise Architecture A Clear and Concise Reference

Amazing Projects from Scratch

Advances in Government Enterprise Architecture

Emerging Research and Opportunities

Enterprise Architecture Planning

The integration of recent technological advances into modern business processes has allowed for greater efficiency and productivity. However, while such improvements are immensely beneficial, the modeling and coordination of these activities offers a unique set of challenges that must be addressed. Business Architectures for Risk Assessment and Strategic Planning: Emerging Research and Opportunities is a pivotal reference source for the latest research findings on the utilization of business models and value propositions in modern enterprises. Featuring extensive coverage on relevant areas such as management information systems, business planning, and value analysis, this publication is an ideal resource for information system practitioners, universities and colleges, business managers, and advanced-level students seeking the latest research on achievements in this field.

What are the success criteria that will indicate that Enterprise Architecture Body of Knowledge objectives have been met and the benefits delivered? What are the compelling business reasons for embarking on Enterprise Architecture Body of Knowledge? Do you monitor the effectiveness of your Enterprise Architecture Body of Knowledge activities? How can you negotiate Enterprise Architecture Body of Knowledge successfully with a stubborn boss, an irate client, or a deceitful coworker? How can we improve Enterprise Architecture Body of Knowledge? Defining, designing, creating, and implementing a process to solve a business challenge or meet a business objective is the most valuable role... In EVERY company, organization and department. Unless you are talking a one-time, single-use project within a business, there should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?' For more than twenty years, The Art of Service's Self-Assessments empower people who can do just that - whether their title is marketer, entrepreneur, manager, salesperson, consultant, business process manager, executive assistant, IT Manager, CxO etc... - they are the people who rule the future. They are people who watch the process as it happens, and ask the right questions to make the process work better. This book is for managers, advisors, consultants, specialists, professionals and anyone interested in Enterprise Architecture Body of Knowledge assessment. All the tools you need to an in-depth Enterprise Architecture Body of Knowledge Self-Assessment. Featuring 693 new and updated case-based questions, organized into seven core areas of process design, this Self-Assessment will help you identify areas in which Enterprise Architecture Body of Knowledge improvements can be made. In using the questions you will be better able to: - diagnose Enterprise Architecture Body of Knowledge projects, initiatives, organizations, businesses and processes using accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in Enterprise Architecture Body of Knowledge and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the Enterprise Architecture Body of Knowledge Scorecard, you will develop a clear picture of which Enterprise Architecture Body of Knowledge areas need attention. Included with your purchase of the book is the Enterprise Architecture Body of Knowledge Self-Assessment downloadable resource, which contains all questions and Self-Assessment areas of this book in a ready to use Excel dashboard, including the self-assessment, graphic insights, and project planning automation - all with examples to get you started with the assessment right away. Access instructions can be found in the book. You are free to use the Self-Assessment contents in your presentations and materials for customers without asking us - we are here to help.

This is the first book that addresses all three main activities in improving business and technology decisions: the planning, design and assessment of enterprise architectures (EAs). Emphasis is on medium and large-size organizations in the private sector (such as banks, airlines and auto industries) and the public sector (such as federal agencies, local government organizations and military services in the Department of Defense). The book addresses the challenges faced by EA builders through an organized presentation of the issues and a step-by-step approach. The material is based on real-life EA project experience and lessons learned over a decade working in multiple-contractor, multiple-discipline teams, and multiple-agency environments.

What is the total cost related to deploying Enterprise Architecture, including any consulting or professional services? Can we add value to the current Enterprise Architecture decision-making process (largely qualitative) by incorporating uncertainty modeling (more quantitative)? What are your current levels and trends in key Enterprise Architecture measures or indicators of product and process performance that are important to and directly serve your customers? What is an Enterprise Architecture? Is There a Role for Patterns in Enterprise Architecture? Defining, designing, creating, and implementing a process to solve a business challenge or meet a business objective is the most valuable role... In EVERY company, organization and department. Unless you are talking a one-time, single-use project within a business, there should be a process. Whether that process is managed and implemented by humans, AI, or a combination of the two, it needs to be designed by someone with a complex enough perspective to ask the right questions. Someone capable of asking the right questions and step back and say, 'What are we really trying to accomplish here? And is there a different way to look at it?' This Self-Assessment empowers people to do just that - whether their title is entrepreneur, manager, consultant, (Vice-)President, CxO etc... - they are the people who rule the future. They are the person who asks the right questions to make Enterprise Architecture investments work better. This Enterprise Architecture All-Inclusive Self-Assessment enables You to be that person. All the tools you need to an in-depth

Enterprise Architecture Self-Assessment. Featuring 751 new and updated case-based questions, organized into seven core areas of process design, this Self-Assessment will help you identify areas in which Enterprise Architecture improvements can be made. In using the questions you will be better able to: - diagnose Enterprise Architecture projects, initiatives, organizations, businesses and processes using accepted diagnostic standards and practices - implement evidence-based best practice strategies aligned with overall goals - integrate recent advances in Enterprise Architecture and process design strategies into practice according to best practice guidelines Using a Self-Assessment tool known as the Enterprise Architecture Scorecard, you will develop a clear picture of which Enterprise Architecture areas need attention. How do we keep improving Enterprise architecture framework? What vendors make products that address the Enterprise architecture framework needs? How can you measure Enterprise architecture framework in a systematic way? How do we go about Securing Enterprise architecture framework? Marketing budgets are tighter, consumers are more skeptical, and social media has changed forever the way we talk about Enterprise architecture framework. How do we gain traction? This limited edition Enterprise architecture framework self-assessment will make you the entrusted Enterprise architecture framework domain leader by revealing just what you need to know to be fluent and ready for any Enterprise architecture framework challenge. How do I reduce the effort in the Enterprise architecture framework work to be done to get problems solved? How can I ensure that plans of action include every Enterprise architecture framework task and that every Enterprise architecture framework outcome is in place? How will I save time investigating strategic and tactical options and ensuring Enterprise architecture framework opportunity costs are low? How can I deliver tailored Enterprise architecture framework advise instantly with structured going-forward plans? There's no better guide through these mind-expanding questions than acclaimed best-selling author Gerard Blokdyk. Blokdyk ensures all Enterprise architecture framework essentials are covered, from every angle: the Enterprise architecture framework self-assessment shows succinctly and clearly that what needs to be clarified to organize the business/project activities and processes so that Enterprise architecture framework outcomes are achieved. Contains extensive criteria grounded in past and current successful projects and activities by experienced Enterprise architecture framework practitioners. Their mastery, combined with the uncommon elegance of the self-assessment, provides its superior value to you in knowing how to ensure the outcome of any efforts in Enterprise architecture framework are maximized with professional results. Your purchase includes access to the \$249 value Enterprise architecture framework self-assessment dashboard download which gives you your dynamically prioritized projects-ready tool and shows your organization exactly what to do next. Your exclusive instant access details can be found in your book.

This book presents a comprehensive and novel adaptive enterprise service systems approach to adapting, defining, operating, managing and supporting (ADOMS) the adaptive cloud enterprise architecture. The adaptive cloud enterprise architecture provides a platform for creating the service-centric agile enterprise. This book is intended for enterprise strategists, enterprise architects, domain architects, solution architects, researchers, and anyone who has an interest in the enterprise architecture and cloud computing disciplines. Contents:IntroductionCloud-Enabled Enterprise AdaptationThe Adaptive Enterprise Service System MetamodelThe Adaptive Enterprise Service System Lifecycle ManagementAdapting Cloud Enterprise Architecture CapabilityDefining Cloud Enterprise Architecture CapabilityOperating Cloud Enterprise Architecture CapabilityManaging Cloud Enterprise Architecture CapabilitySupporting Cloud Enterprise Architecture CapabilityCase Study Examples Readership: Researchers, academics, professionals and graduate students in software engineering, information sciences and networking. The purpose of this volume is to present a framework for incorporating architecture based DOTMLPF assessments into the JCIDS and DoD acquisition processes. It presents a recommended set of assessments across the seven domains, describing the information and data needed to conduct each assessment, the standard architecture products that may contain the required information and data, the expected output of the assessment, and the general nature of the assessment (i.e., Objective or Subjective). The presentation is not meant to be inclusive of all potential DOTMLPF or architecture related assessments that may be performed as a part of the JCIDS process. Rather, it is meant to generate discussion and thought, leading to further refinement and development of the ideas and concepts presented.

How will the Blended Enterprise Architecture Approach team and the organization measure complete success of Blended Enterprise Architecture Approach? Can we track that any Blended Enterprise Architecture Approach project is implemented as planned, and is it working? At what point will vulnerability assessments be performed once Blended Enterprise Architecture Approach is put into production (e.g., ongoing Risk Management after implementation)? Strategic planning -Blended Enterprise Architecture Approach relations How will variation in the actual durations of each activity be dealt with to ensure that the expected Blended Enterprise Architecture Approach results are met? This best-selling Blended Enterprise Architecture Approach self-assessment will make you the reliable Blended Enterprise Architecture Approach domain auditor by revealing just what you need to know to be fluent and ready for any Blended Enterprise Architecture Approach challenge. How do I reduce the effort in the Blended Enterprise Architecture Approach work to be done to get problems solved? How can I ensure that plans of action include every Blended Enterprise Architecture Approach task and that every Blended Enterprise Architecture Approach outcome is in place? How will I save time investigating strategic and tactical options and ensuring Blended Enterprise Architecture Approach costs are low? How can I deliver tailored Blended Enterprise Architecture Approach advice instantly with structured going-forward plans? This book provides a method to plan, develop, validate, or evolve the design of an enterprise architecture function so that it fully meets the organization's needs. The reader will benefit from this book in two ways. First, it provides a structured overview and orientation to the subject of architecture from an architecture function perspective. Second, it guides through the process of planning, building, and operating your own architecture organization based on a generic architecture function blueprint presented in the form of a pattern language offering a structured means for navigating, contextualizing, combining, and composing the architecture function patterns. The book is structured in six chapters. Chapter 1 "Introduction" explains the starting position and objectives of the book and introduces key concepts that will be explained further in subsequent chapters. Chapter 2 "Architecture Function Pattern Language" introduces the concepts of pattern, pattern catalogue, pattern topology, and ontology and explains how these concepts are combined to form a pattern language for planning, designing, and operating an architecture function. Next, Chapter 3 "Architecture Function - Context" introduces concepts that are crucial for understanding the challenges that an architecture function faces and presents a generic schema for the business organizations and value chain. Chapter 4 "Architecture Function - Challenge" looks at an architecture function from a black box perspective and outlines the expectations and requirements that companies place on architecture organizations. It discusses the building blocks of an architecture function, the services it provides along the enterprise value chain, and the quality attributes that enterprises expect from their functions. Chapter 5 "Architecture Function - Constitution" then shifts from a black-box perspective to a white-box perspective and outlines the generic design of an architecture function in order to realize functional and quality-related requirements. Chapter 6 "Pattern Catalogue" eventually introduces the pattern catalogue with a total of 48 architecture function patterns. These patterns suggest designs for collaboration between the architecture function and enterprise organizations, for the elaboration and development of enterprise services along the enterprise value chain, or for aligning architecture governance with enterprise governance. The book is intended for a broad readership, including enterprise, domain, and solution architects, lecturers and students, and anyone else interested in understanding the value proposition, responsibilities, outcomes, methods, and practices of architecture functions. It introduces the basic concepts and theories needed to understand the pattern language presented and the patterns it summarizes.
