

Airplane Performance Stability Control Perkins C D

The Germans used cavity magnetrons for their excellent Wurzburg fire-control radar to direct flak guns, but the airborne Telefunken sets in Me-110s and other night fighters all used draggy external stag's-antlers antennas. The Schräge Musik guns were fixed, and the only aiming consisted of a 110 pilot ghosting under an RAF bomber from astern ...

A swept wing is a wing that angles either backward or occasionally forward from its root rather than in a straight sideways direction.. Swept wings have been flown since the pioneer days of aviation. Wing sweep at high speeds was first investigated in Germany as early as 1935 by Albert Betz and Adolph Busemann, finding application just before the end of the Second World War.

Airplane Performance Stability Control Perkins

Synergy's unique 'tail on the wings configuration' provides many amazing benefits related to stability and high "span efficiency," leading to excellent low and high speed performance. Eliminating unnecessary length allows less-visible technologies for laminar flow, pressure thrust, and boundary layer control to provide yet higher speeds with economy.

How the Me-110 Became a Bomber's Worst Nightmare

An example of the ATD is provided by Jordan, Singh, and Repp (1989).In this study, two methods of reducing stereotypical behavior (e.g., rocking, hand-flapping) in retarded subjects were examined: gentle reaching (the use of social bonding and gentle persuasion with the developmentally disabled) and visual screening (covering the client's eyes for a few seconds following stereotypic behavior ...
