in ...

Adult AE criteria were developed for several  
well-defined syndromes (i.e., limbic  
encephalitis, acute disseminated  
encephalomyelitis [ADEM], and anti-NMDAR  
encephalitis) and the associated algorithm  
focuses on whether patients meet criteria for  
these syndromes. 27 In contrast, many  
pediatric patients with AE do not present with a  
well-defined syndrome and so the pediatric  
criteria were devised to capture the breadth of  
clinical and paraclinical findings reported in  
children.
