API RP 571, Damage Mechanisms Affecting Fixed Equipment in the Refining Industry, Second Edition, is a recommended practice developed and published by the American Petroleum Institute (API) that provides an in-depth look at over 60 different damage mechanisms that can occur to process equipment in refineries. The first edition was published in December of 2003, and an updated second edition ... Buildings described in API RP 753, Management of Hazards Associated with Location of Process Plant Portable Buildings, First Edition, June 2007, as 'portable buildings specifically designed to resist significant blast loads' and intended for permanent use in a fixed location are covered in this document (API RP 752).

Process Measurement Instrumentation

Section 2 of RP 554 provides considerations for the selection, specification, and installation of automatic control systems for use in refinery processes. Single-loop controllers, multiloop controllers, programmable controllers, and distributed control systems are discussed with relevant design and application engineering information.

API RP 554 : Process Instrumentation and Control

— water bath or oil bath indirect fired heaters (covered by API 12K); — CO boilers, pyrolysis furnaces (e.g. ethylene and hydrogen reformers), and other specialty heaters. This RP includes primary measuring and actuating instruments, controls, alarms, and protective systems as they apply to fired heaters.
