Efficacy Definitive CRT vs RT alone. The key evidence supporting the use of this protocol comes from the landmark RTOG 8501, a phase 3 trial, which randomised 123 patients to receive radiation therapy (RT) alone (64Gy, n=62) vs chemoradiation therapy (CRT) (4 cycles of cisplatin and fluorouracil commencing on day 1 of RT [50Gy in 25#], n=61). r The trial was closed prematurely with 123 ...

Renal Mass and Localized Renal Cancer: AUA Guideline focuses on the evaluation and management of clinically localized renal masses suspicious for renal cell carcinoma (RCC). Diagnosis, patient counseling, and renal biopsy are covered in addition to various management strategies, including partial and radical nephrectomy, thermal ablation, and active surveillance.

Renal Cancer: Renal Mass & Localized Renal Cancer ...

Renal cell carcinoma (RCC) is a kidney cancer that originates in the lining of the proximal convoluted tubule, a part of the very small tubes in the kidney that transport primary urine.RCC is the most common type of kidney cancer in adults, responsible for approximately

90 – 95% of cases. RCC occurrence shows a male predominance over women with a ratio of 1.5:1.
