Kevin Buzzard (lecture 20/20) Automorphic Forms And The Langlands Program [2017] Automorphic Forms And Lie Superalgebras Lie superalgebras are generalizations of Lie algebras, useful for depicting supersymmetry – the symmetry relating fermions and bosons. Most known examples of Lie superalgebras with a related automorphic form such as the Fake Monster Lie algebra whose reflection group is given by the Leech lattice arise from (super)string theory and can be derived from lattice vertex algebras.

Automorphic Forms and Lie Superalgebras | Urmie Ray | Springer Overview. This book provides the reader with the tools to understand the ongoing classification and construction project of Lie superalgebras. It presents the material in as simple terms as possible. Coverage specifically details Borcherds-Kac-Moody superalgebras. The book examines the link between the above class of Lie superalgebras and automorphic form and explains their construction from lattice vertex algebras.

Papers by R. E. Borcherds

We describe the group of continuous automorphisms of all simple infinite-dimensional linearly compact Lie superalgebras and use it in order to classify  $\mathfrak{g}$ -forms of these superalgebras over any field of characteristic zero.

## AUTOMORPHISMS AND FORMS OF SIMPLE INFINITE-DIMENSIONAL ...

In this paper, we investigate the structure of graded Lie superalgebras  $L = (\mathfrak{g}, a) \times A L(\mathfrak{g}, a)$ , where  $\mathfrak{g}$  is a countable abelian semigroup and  $A$  is a countable abelian group with a coloring map satisfying a certain finiteness condition. Given a denominator identity for the graded Lie superalgebra  $L$ , we derive a superdimension formula for the homogeneous subspaces  $L(\mathfrak{g}, a)(\dots)$
