A thoroughly revised third edition of this widely praised, bestselling textbook presents a comprehensive systems-level perspective of electric and hybrid vehicles with emphasis on technical aspects, mathematical relationships and basic design guidelines. The emerging technologies of electric vehicles require the dedication of current and future engineers, so the target audience for the book is the young professionals and students in engineering eager to learn about the area. The book is concise and clear, its mathematics are kept to a necessary minimum and it contains a well-balanced set of contents of the complex technology. Engineers of multiple disciplines can either get a broader overview or explore in depth a particular aspect of electric or hybrid vehicles. Additions in the third edition include simulation-based design analysis of electric and hybrid vehicles and their powertrain components, particularly that of traction inverters, electric machines and motor drives. The technology trends to incorporate wide bandgap power electronics and reduced rare-earth permanent magnet electric machines in the powertrain components have been highlighted. Charging stations are a critical component for the electric vehicle infrastructure, and hence, a chapter on vehicle interactions with the power grid has been added. Autonomous driving is another emerging technology, and a chapter is included describing the autonomous driving system architecture and the hardware and software needs for such systems. The platform has been set in this book for system-level simulations to develop models using various softwares used in academia and industry, such as MATLAB/Simulink, PLECS, PSIM, Motor-CAD and Altair Flux. Examples and simulation results are provided in this edition using these software tools. The third edition is a timely revision and contribution to the field of electric vehicles that has reached recently notable markets in a more and more environmentally sensitive world.

This review, looking at disability employment support, and entitled "Getting in, staying in and getting on", seeks to ensure that disabled people have the opportunities and support needed to meet their employment aspirations. The focus of the review has set out a number of recommendations for employment support and the author has focused on three areas to promote this objective. (1) To set out the types of support that today's young disabled people will want in a future economy; (2) Enshrining the right to work objectives as set out in the UN Convention on the Rights of Persons with Disabilities; (3) To make a case for cross-Government work to unlock the big enablers of employment, that is "Getting in, staying in and getting on" , which includes raising the aspirations of what disabled people can achieve.

For "getting in" this should include more disabled people doing apprenticeships, work experience and work placements; for "staying in" there should be better promotion for Access to Work for retention and for "getting on" there should be greater encouragement of disabled people in setting up businesses and gaining skills for career development. The publication is divided into 5 chapters, with appendices.
