Torrance, who is generally considered to have been one of the most significant theologians writing in English during the twentieth century, with a view toward showing how his theological method and all his major doctrinal views were shaped by his understanding of the doctrine of the Trinity. Torrance pursued a theology that was realist because he attempted to think in accordance with the unique nature of the object that is known. In holding to such a methodology, he drew an analogy between theology and natural science. This book demonstrates how, for Torrance, God relates with humanity within time and space so that creation finds its meaning in relation to God and not in itself; this enabled him to avoid many theological pitfalls such as agnosticism, subjectivism and dualism while explaining the positive implications of various Christian doctrines in a penetrating and compelling manner. This book offers an important resource for students of theology and for scholars who are interested in seeing how serious dogmatic theology shapes and should shape our understanding of the Christian life.

This book constitutes the refereed proceedings of the 13th Annual International Symposium on Algorithms and Computation, ISAAC 2002, held in Vancouver, BC, Canada in November 2002. The 54 revised full papers presented together with 3 invited contributions were carefully reviewed and selected from close to 160

submissions. The papers cover all relevant topics in algorithmics and computation, in particular computational geometry, algorithms and data structures, approximation algorithms, randomized algorithms, graph drawing and graph algorithms, combinatorial optimization, computational biology, computational finance, cryptography, and parallel and distributed algorithms. Motivated by some notorious open problems, such as the Jacobian conjecture and the tame generators

problem, the subject of polynomial automorphisms has

become a rapidly growing field of interest. This book, the first in the field, collects many of the results scattered

throughout the literature. It introduces the reader to a fascinating subject and brings him to the forefront of research in this area. Some of the topics treated are invertibility criteria, face polynomials, the tame generators problem, the cancellation problem, exotic spaces, DNA for polynomial automorphisms, the Abhyankar-Moh theorem, stabilization methods, dynamical systems, the Markus-Yamabe conjecture, group actions, Hilbert's 14th problem, various linearization problems and the Jacobian conjecture. The work is essentially self-contained and aimed at the level of beginning graduate students. Exercises are included at the end of each section. At the end of the book there are appendices to cover used material from algebra, algebraic geometry, D-modules and Gröbner basis theory. A long list of "strong" examples and an extensive bibliography conclude the book.

## Topological Triviality and Versality for Subgroups $SA_n$ and $KA_n$

The art of transforming a circuit idea into a chip has changed permanently. Formerly, the electrical, physical and geometrical tasks were predominant. Later, mainly net lists of gates had to be constructed. Nowadays, hardware description languages (HDL) similar to programming languages are central to digital circuit design. HDL-based design is the main subject of this book. After emphasizing the economic importance of chip design as a key technology, the book deals with VLSI design (Very Large Scale Integration), the design of modern RISC processors, the hardware description language VERILOG, and typical modeling techniques. Numerous examples as well as a VERILOG training simulator are included on a disk. The unifying approach of functional analysis is to view functions as points in abstract vector space and the differential and integral operators as linear transformations on these spaces. The author's goal is to present the basics of functional analysis in a way that makes them comprehensible to a student who has completed courses in linear algebra and real analysis, and to develop the topics in their historical contexts.

The artist behind the Bedford Hours, known as the Bedford Master, was among the most prolific painters of his day but his identity remains a mystery. This account is a tale which unfolds towards a number of conclusions, the key one being that it is likely that he was Haincelin of Hagenau.

## A Copious and Critical English-Latin Dictionary

John F. Kennedy

The text presents and discusses some of the most influential papers in Matrix Computation authored by Gene H. Golub, one of the founding fathers of the field. Including commentaries by leading experts and a brief biography, this text will be of great interest to students and researchers in numerical analysis and scientific computation.

An argument that the way we listen to speech is shaped by our experience with our native language.

Understanding speech in our native tongue seems natural and effortless; listening to speech in a nonnative language is a different experience. In this book, Anne Cutler argues that listening to speech is a process of native listening because so much of it is exquisitely tailored to the requirements of the native language. Her cross-linguistic study (drawing on experimental work in languages that range from English and Dutch to Chinese and Japanese) documents what is universal and what is language specific in the way we listen to spoken language. Cutler describes the formidable range of mental tasks we carry out, all at once, with astonishing speed and accuracy, when we listen. These include evaluating probabilities arising from the structure of the native vocabulary, tracking information to locate the boundaries between words, paying attention to the way the words are pronounced, and assessing not only the sounds of speech but prosodic information that spans sequences of sounds. She describes infant speech perception, the consequences of language-specific specialization for listening to other

languages, the flexibility and adaptability of listening (to our native languages), and how language-specificity and universality fit together in our language processing system. Drawing on her four decades of work as a psycholinguist, Cutler documents the recent growth in our knowledge about how spoken-word recognition works and the role of language structure in this process. Her book is a significant contribution to a vibrant and rapidly developing field.

John F. Kennedy is the president that everyone knows. He was a rich man ' s son, an athlete, a war hero, a ladies ' man, an author, a president, his face rendered forever young because the last time Americans saw him, he was riding in a convertible in Dallas, his glamorous wife at his side. Then the bullets struck, and the assassinated president became a legend, the truth of his life obscured by his tragic and untimely death. But JFK had more depth to his character than the magazine covers indicated. Inside you will read about... No Irish Need Apply War and the Kennedys Kennedy in Congress Kennedy for President Kennedy Women The Presidency And much more! The

rich man ' s son was the grandson of Irishmen who knew what it was to be denied jobs because Irish weren ' t welcome in Boston. The athlete suffered from poor health all his life, from a bad back to Addison ' s disease. The war hero whose PT-109 boat became part of his campaign legend was the son who survived; elder brother Joe, flying on a secret mission, was killed for his heroism. The ladies ' man loved his wife, but fidelity was not a concept revered by the Kennedy men. The Pulitzer Prize that he was awarded for Profiles in Courage should have gone to the person who actually wrote it. In 1963, death in Dallas ended his first term as president, bringing an end to the optimism that he inaugurated when he narrowly defeated Vice President Richard Nixon in the 1960 election. But the Kennedy legend, like Camelot, lives forever. "If you're looking for something tart to cut the holiday sweetness, Shaffer offers a naughty little treat." -- The Gazette "It's Beginning to Look a Lot Like F\*ck This" is an off-beat collection of Christmas parodies, essays, poems, and cartoons by New York Times bestselling humorist Andrew Shaffer. Previously published as "The Shelf on the Elf," this newly-expanded holiday cult classic has it all: holiday pickles, regret, talking lambs, and knife-wielding maniacs.
