Learn programming in Java from scratch - and keep on learning Developing Java Software The new edition of this excellent primer teaches how to program in an object-oriented style. Objects come first, providing a framework for understanding how Java programs work and how they can be designed, in an organised and systematic way. Programming is taught with a view to quality software engineering and is anchored in real-world issues, particularly testing. Examples and exercises provide motivation. Self-tests and class-project suggestions enhance this comprehensive Go, to, the support website at: <http://www.dcs.kcl.ac.uk/DevJavaSoft/> * More exercises * Selected solutions * Instructor's notes and resources * Code for case studies * Updates, revisions and bug fixes * Reviews and feedback Reviews of First Edition: 'If you want to learn to program this is an excellent book (and) if you are responsible for running a course on programming then this is a book that you should consider as a course text... Very much recommended.' Francis Glassborow 'A book suitable as a learning text or reference for professional programmers developing large scale applications and as a set teaching text for courses when one is concerned with more than Java programming... Highly recommended.' Brian Bramer, CVU'. provides a thorough curriculum - all in Java - from basic programming and core algorithms to software engineering issues; it will be a useful single reference for anyone wanting to program well.' Darynda Jones, author of The New York Times bestselling series that began with First Grave on the Right, brings us Death and the Girl Next Door, a thrilling Young Adult novel garnering high praise and early buzz from major authors Ten years ago, Lorelei's parents disappeared without a trace. Raised by her grandparents and leaning on the support of her best friends, Lorelei is finally beginning to accept the fact that her parents are never coming home. For Lorelei, life goes on. High school is not quite as painful as she thinks it will be, and things are as normal as they can be. Until the day the school's designated loner, Cameron Lusk, begins to stalk her, turning up where she least expects it, standing outside her house in the dark, night after night. Things get even more complicated when a new guy—terrifying, tough, sexy Jared Kovach—comes to school. Cameron and Jared instantly despise each other and Lorelei seems to be the reason for their animosity. What does Jared know about her parents? Why does Cameron tell Jared he can't have Lorelei? And what will any of them do when Death comes knocking for real? Thrilling, sassy, sexy, and inventive, Darynda Jones's first foray into the world of teens will leave readers eager for the next installment. "Unique, witty, and touching.—I LOVED THIS BOOK!" —P.C. The biggest thing in life for most people aside from personal relationships and health is to earn a living. This comes down to four things: 1.) Education 2.) Finding a job, keeping it 3.) Starting and running a business 4.) State of being, are you capable of being out there, around people These are all huge areas. I cover them all somewhere through all the books I 've written because I know the real world and I know it 's not the glittery world you can see on TV at anytime but a lot of people, especially young ones, don ' t know this then when the real world hits them straight-on for the first time, it 's like a spear piercing through their being. Life is hard. I wrote the " People Power " books because I lived a fun, easy life until a few tragedies hit then I knew anybody can end up sick, unemployed, feeling hopeless, uninspired and destitute.

Learning a complex new language is no easy task especially when it's an object-oriented computer programming language like Java. You might think the problem is your brain. It seems to have a mind of its own, a mind that doesn't always want to take in the dry, technical stuff you're forced to study. The fact is your brain craves novelty. It's constantly searching, scanning, waiting for something unusual to happen. After all, that's the way it was built to help you stay alive. It takes all the routine, ordinary, dull stuff and filters it to the background so it won't interfere with your brain's real work—recording things that matter. How does your brain know what matters? It's like the creators of the Head First approach say, suppose you're out for a hike and a tiger jumps in front of you, what happens in your brain? Neurons fire. Emotions crank up. Chemicals surge. That's how your brain knows. And that's how your brain will learn Java. Head First Java combines puzzles, strong visuals, mysteries, and soul-searching interviews with famous Java objects to engage you in many different ways. It's fast, it's fun, and it's effective. And, despite its playful appearance, Head First Java is serious stuff: a complete introduction to object-oriented programming and Java. You'll learn everything from the fundamentals to advanced topics, including threads, network sockets, and distributed programming with RMI. And the new, second edition focuses on Java 5.0, the latest version of the Java language and development platform. Because Java 5.0 is a major update to the platform, with deep, code-level changes, even more careful study and implementation is required. So learning the Head First way is more important than ever. If you've read a Head First book, you know what to expect—a visually rich format designed for the way your brain works. If you haven't, you're in for a treat. You'll see why people say it's unlike any other Java book you've ever read. By exploiting how your brain works, Head First Java compresses the time it takes to learn and retain—complex information. Its unique approach not only shows you what you need to know about Java syntax, it teaches you to think like a Java programmer. If you want to be bored, buy some other book. But if you want to understand Java, this book's for you.

It was already dusk. The last train towards East Java was ready to depart. The station master was holding a sign of departure and the departure warning was sounding. A young soldier in his uniform was ready to depart. He had a backpack and rifle on his back and a pistol at his waist. He was standing on the platform with a girl. They gazed at each other; neither of them could break away. Putting both his arms on her shoulders, he looked deep into her eyes. His gaze penetrated her heart deeply. At that moment, the girl felt and knew that she would not see him again. This was a farewell. He would never come back.

He only wanted to build a plaything - a small, simple device born of innate curiosity and a fascination of things mechanical. Scavenging parts and repurposing components, a country gunsmith assembles what is supposed to be a conversation piece - a trinket to show his friends... a toy really... a small rail gun. The invention is so much more. After nearly destroying his West Texas shop, Dusty realizes he has stumbled upon science that could alter the future of mankind. The size and shape of a common rifle, his device is capable of producing unimaginable energy. The simple, gentleman rancher is faced with a dilemma of the ages, the survival of the human race. The resulting technology can produce limitless, clean energy, or if used as a weapon, inconceivable destruction. Nothing so monumental stays secret for long. Powerful men and desperate governments learn of the discovery, and it quickly becomes evident that whoever wields the rail gun can dominate the entire planet. Book One of a new series, The Olympus Device by author Joe Nobody takes the reader through a fast paced adventure that explores the dichotomy of corruptive power versus ultimate benefit.

Head First Java

"Ren van Landsberg stood alone on the deck of the steamer ... there could be no turning back to Europe now. This was Java--the end of his journey--and he was a little frightened at all that the suave, exotic name implied." In search of his future, a young Dutchman travels south of the equator to join his older brother supervising a sugar plantation on Java, circa 1900. From the day he arrives, he struggles to adapt to social, cultural and sexual mores that are alien, even contradictory, to all his previous life experiences. Despite having a "girl back home", Ren soon encounters several young ladies of both his own race and Java's. There, the complexities begin, not the least of which is Grandmother's Dasam... "I have three packages," her whispering voice went on to the girl. "This one," holding up a small package, "will kill a healthy person in one hour... This second one will kill more slowly--about a month--and this one will take several years, but he'll suffer much and die in the end." When in Java, expect the unexpected. ** Born in Holland in 1879, author Baron Schwartzberg also worked on Java as a young man. Three decades later he was driven to enlist journalist Mary Bennett Harrison to help him tell this story. How many vignettes, characters or women he drew from actual experiences is unknown. But as you'll discover, this highly credible colonial romance rings true. After a 30 year hiatus, literary archaeologist Kent Davis revives the Baron's 1931 novel as an expanded modern edition with nearly 300 period photos showing Javanese people and places featured in the text. Plus appendices with publisher's notes, author bios, Davis' article "Javanese Women in Photos: Emerging Technologies and World Views", excerpts from the 1912 travel guide, Isles of the East, and the 1929 book Malay Poisons and Charm Cures; a glossary of Indonesian terms; and regional maps.

Welcome to Code Like a Girl, where you'll get started on the adventure of coding with cool projects and step-by-step tips, from the co-author of the bestselling The Daring Book for Girls. Coding is about creativity, self-expression, and telling your story. It's solving problems and being curious, building things, making the world a better place, and creating a future. It's about you: whoever you are, wherever you're at, whatever you want. Nearly everything you encounter on a screen is made from code. You see, with code you can have an idea and put it into action: it's your voice and your vision. From the outside, tech and code may seem puzzling and mysterious, but when you get through the door and past the first few beginner steps and your code starts to work, it feels like magic. In this book, you'll learn how to: - Code with Scratch--projects like making a dog walk through the park, sending your friend a card, and devising a full-scoring game! - Build your own computer--really! - Create your own digital fortune-teller, with the Python language. - Make your own smartphone gloves. - Make light-up bracelets. - Code a motion sensor that tells you when someone enters your room. - And lots more!

Before fate intervened, Joseph Needham was a distinguished biochemist at Cambridge University, married to a fellow scientist. In 1937 he was asked to supervise a young Chinese student named Lu Gwei-Djen, and in that moment began the two greatest love affairs of his life - Miss Lu, and China. Miss Lu inspired Needham to travel to China where he initially spent three dangerous years as a wartime diplomat. He established himself as the pre-eminent China scholar of all time, firm in his belief that China would one day achieve world prominence. By the end of his life, Needham had become a truly global figure, travelling endlessly and honoured by all - though banned from America because of his politics. And in 1989, after a fifty-two year affair, he finally married the woman who had first inspired his passion. The Magnificent Barbarian is Simon Winchester at his best - at once a magnificent portrait of one man's remarkable life and a riveting exploration of the country that so engaged him.

Literary Digest International Book Review

The book provides complete coverage of fundamental IP networking in Java. It introduces the concepts behind TCP/IP and UDP and their intended use and purpose; gives complete coverage of Java networking APIs, includes an extended discussion of advanced server design, so that the various design principles and tradeoffs concerned are discussed and equips the reader with analytic queuing-theory tools to evaluate design alternatives; covers UDP multicasting, and covers multi-homed hosts, leading the reader to understand the extra programming steps and design considerations required in such environments. After reading this book the reader will have an advanced knowledge of fundamental network design and programming concepts in the Java language, enabling them to design and implement distributed applications with advanced features and to predict their performance. Special emphasis is given to the scalable I/O facilities of Java 1.4 as well as complete treatments of multi-homing and UDP both unicast and multicast.
