Little Wars is a set of rules for playing with toy soldiers, written by English novelist H. G. Wells in 1913. The book, which had a full title of Little Wars: a game for boys from twelve years of age to one hundred and fifty and for that more intelligent sort of girl who likes boys' games and books, provided simple rules for miniature wargaming. Although first printed in 1913, an updated version was released in 2004. It is mentioned in one of Wells' other books, Joan and Peter, where, during the Great War, a sensitive young man named Bunny Cuspard tries his best to compare his life in the army as a larger version of the manual.

Growing up in suburban Detroit, David Hahn was fascinated by science. While he was working on his Atomic Energy badge for the Boy Scouts, David 's obsessive attention turned to nuclear energy. Throwing caution to the wind, he plunged into a new project: building a model nuclear reactor in his backyard garden shed. Posing as a physics professor, David solicited information on reactor design from the U.S. government and from industry experts. Following blueprints he found in an outdated physics textbook, David cobbled together a crude device that threw off toxic levels of radiation. His wholly unsupervised project finally sparked an environmental emergency that put his town ' s forty thousand suburbanites at risk. The EPA ended up burying his lab at a radioactive dumpsite in Utah. This offbeat account of ambition and, ultimately, hubris has the narrative energy of a first-rate thriller.

Clicker Training and What It Teaches Us About All Animals

Lessons in Project Management

From the founder of "clicker" training, the widely praised humane approach to shaping animal behavior, comes a fascinating book—part memoir, part insight into how animals and people think and behave. A celebrated pioneer in the field of no-punishment animal training, Karen Pryor is responsible for developing clicker training—an all-positive, safe, effective way to modify and shape animal behavior—and she has changed the lives of millions of animals. Practical, engrossing, and full of fascinating stories about Pryor ' s interactions with animals of all sorts, Reaching the Animal Mind presents the sum total of her life ' s work. She explains the science behind clicker training, how and why it works, and offers step-by-step instructions on how you can clicker-train any animal in your life. For bonus video clips, slide shows, articles, downloadable exercises, and links expanding on the contents of the book, go to ReachingtheAnimalMind.com.

Scouting has been in existence since 1907, offering children and young adults over 100 years of adventure, jamborees, summer camps, badges, scarves and gang shows. The collection of the badges has always been the backbone of the movement, and back in 1914 a book was published that gathered together all of the legendary badges and gave instruction on how to pass them. This is a celebratory edition of that 1914 classic, showing how this much-loved institution has grown and evolved. This truly fascinating book was the official manual used by Scouts to learn these subjects, and by Scout leaders to teach them. This is an authentic dangerous book for boys and takes us back to a distant time before TVs and home computers, when children were encouraged to be active and to 'get out into the open air' whenever they could; a time when it was important to be able to make things and, when they broke, repair them. It is a fascinating historical document that also reveals the morality of an era when readers were entreated to be 'clean in thought, word and deed', and 'refrain from spitting in omnibuses.'

"Criminal identification by means of fingerprints is one of the most potent factors in obtaining the apprehension of fugitives who might otherwise escape arrest and continue their criminal activities indefinitely." -J. Edgar Hoover, Introduction, The Science of Fingerprints The Science of Fingerprints: Classification and Uses is a 1957 FBI guide for taking and analyzing fingerprints, with an introduction by J. Edgar Hoover. Hoover personified the FBI during his reign of 48 years, beginning in 1924, as the founding director of the FBI. He has been credited with building and modernizing the FBI, including with establishing a centralized fingerprint file. Although we have entered the era of DNA and cyber-crime, fingerprinting remains an essential tool for investigating crime. This manual is valuable reading for students of criminal justice, historians, and anyone interested in the essentials of fingerprinting.
