Maybe it was a

older, patient and
wise, who
understood you
when you were

Page 7/126

young and

you see the world as

sound advice to help
you make your way
through it. For
Mitch Albom, that
person was Morrie
Schwartz, his college
professor from

Page 8/126

nearly twenty years ago. Maybe, like Mitch, you lost track of this mentor as you made your way, and the insights faded, and the world seemed colder.

Wouldn't you like to see that person again, ask the bigger questions that still

Page 9/126

haunt you, receive wisdom for your busy life today the way you once did when you were younger? Mitch Albom had that second chance. He rediscovered Morrie in the last months of the older man ' s life. Knowing he was

Page 10/126

dying, Morrie visited with Mitch in his study every Tuesday, just as they used to back in college.

Their rekindled relationship turned into one final “ class ” : lessons in how to live.

Tuesdays with Morrie is a magical

Functioning eyes

can reduce an

Page 25/126

contributes to a child's social development, academic achievement, and better health across the lifespan. The public generally recognizes its reliance on sight and fears its loss,

Page 26/126

but emphasis on eye and vision health, in general, has not been integrated into daily life to the same extent as other health promotion activities, such as teeth brushing; hand washing;

Page 27/126

Their Eyes Were Watching God is a 1937 novel by African-American writer Zora Neale Hurston. It is considered a classic of the Harlem Renaissance of

Page 33/126

the 1920s, and it is likely Hurston's best known work. This book was first projected in 2004, when Author Hannah Fairbairn was teaching interpersonal skills at the Carroll Center for the Blind in Newton,

Page 34/126

Massachusetts.
The experiences
of her adult
students—and her
own experience of
sight
lost—convinced her
that everyone
losing vision needs
access to good
information about
the process of

Page 35/126

adjustment to
losing sight and
practical ways to
use assertive
speech. When You
Can't Believe
Your Eyes is
intended for
anyone going
through vision
loss, their friends,
and families. It will

Page 36/126

inform readers
how to get expert
professional help,
face the trauma of
loss, and navigate
the world using
speech more than
sight. Each of the
twelve chapters in
the book contain
many short
sections and bullet-

point lists,
intended to
facilitate access to
the right
information. It
begins where you
begin—at the
doctor's office or
the hospital. Since
vision loss takes
many forms, there
are suggestions

for questions you might ask to get a clear diagnosis and the best treatment. Part One also has a description of legal blindness and possible prevention, advice about your job, and tips for life at

Page 39/126

home. Part Two is about believing in yourself as you deal with the loss, the anger, and the fear before you come up for air and consider training. Parts Three and Four describe using assertive speech

Page 40/126

and action in all kinds of settings as your independence and confidence increase. Part Five gives detailed information about everything from dating, and caring for babies to senior living,

Page 41/126

volunteering, and retaining your job. It is hoped that by reading and trying out the suggestions, the reader will recover full confidence, become a positive, assertive communicator, and lead a satisfying

life. Because vision loss happens mostly in older years, the book is written with seniors particularly in mind.

Professionals will also find it to be a useful resource for their patients.

Levitation tells the peculiar story of those who have dreamed, believed, or practiced levitation through history, whether they were successful or not. Levitation could be thought of best as a pre- and parallel

history of aviation, but it is not really about flights of the aeronautical kind. Instead, the book tracks the long-standing belief that people can actually float in the air, relatively unaided. Early modern scientists believed in the force of levity as an

Page 72/126

opposing force to
gravity; traditional
societies have held
deep-rooted
shamanic
traditions of spirit-
and dream-flight
through
storytelling.
Ancient religious
movements have
long believed in the
power of ascetic
saints to hover in

Page 73/126

sublime
ecstasy. Magicians
and mesmerists
have employed the
tricks of stage,
cinema, and the
enigma of Eastern
traditions to
convince audiences
of their power to
lift through thought
alone. And science-
fiction novelists and
urban planners have

Page 74/126

speculated on floating cities hovering high above the earth. Many artists have experimented with levitation too, from the Surrealists to Yves Klein. In this book, Peter Adey explores the idea of levitation within our cultural, scientific, and spiritual lives.

Page 75/126

From science to

philosophy, law,

figure than we
may have thought.
In a world
increasingly ruled

Page 76/126

by numbers and algorithms, award-winning journalist Chris Jones makes a compelling case for a more personal approach to analytical thinking. THE EYE TEST is a necessary course correction, a call for a more balanced, personal approach to problem-solving.

Page 77/126

Award-winning journalist Chris Jones makes the case for the human element—for what smart, practiced, devoted people can bring to situations that have proved resistant to analytics. Jones shares what he's learned from an army of

Page 78/126

extraordinary talents, including some of the best doctors, executives, athletes, meteorologists, magicians, designers, astrophysicists, and detectives in the world. There are lessons in their mastery. Of course, there is a place for

Page 79/126

numbers in decision-making. No baseball player should be judged by his jawline. But the analytics revolution sparked by Michael Lewis ' s Moneyball now threatens to replace one kind of absurdity with another. We have developed a blind faith in the machine,

Page 80/126

the way a driver overly reliant on his GPS might be led off the edge of a cliff. Not all statistical analysis is sound.

Algorithms aren't infallible, and spreadsheets aren't testaments. Trust in them too much, and they risk becoming

instruments of
destruction rather
than understanding.
Worse, data ' s
supremacy in our
daily lives has led
to a dangerous
strain of anti-
expertise: the belief
that every problem
is a math problem,
and anyone given
access to the right
information will find

Page 82/126

the right answer.
That taste doesn't
matter, experience
doesn't matter,
creativity doesn't
matter. That we
can't believe our
eyes, no matter
how much they've
seen. THE EYE
TEST serves as a
reminder that if
beauty is less of a
virtue in the age of

Page 83/126

analytics, a good eye still is. This book is a celebration of our greatest beholders—and an absorbing, inspiring guide for how you might become one, too.

We live in a
polarized time.
Christians are quick
to conceive of
themselves either
as theologically-
minded or worship-

Page 105/126

minded; either
thinking Christians
or feeling
Christians. The
results are
damaging: theology
without worship is
muted, stifled, and
cold, and worship
without theology is
ungrounded,
unrooted, and
uninformed. This is
not the way it was

Page 106/126

meant to be.
Theology (our
study and
knowledge of God)
should always lead
to doxology (our
worship of Him).
Worship should
always be rooted in
theology. When we
study the nature
and character of
God as revealed in
his Word, we are

Page 107/126

invited to respond
in the affectionate,
obedient
discipleship of
worship. How can
we keep our
theology from being
mere head
knowledge? How do
we give our
worship roots that
will last? By fixing
our eyes on God
Himself—the object

Page 108/126

of our study and the object of our worship. Fix Your Eyes is an invitation to understand core doctrines of the Christian faith and apply them in our daily worship of God. It walks believers through key theological concepts and shows how each can be

Page 109/126

lived out in daily
life.
