by the continuous series of developments — in columns, equipment, apparatus, techniques, and applications — that have occurred since the publication of the first edition of this very successful offering. Problems experienced by

*Page 26/93*

users differ from case to case, and these differences sometimes necessitate different approaches to care, maintenance, and trouble-shooting. This book is intended for the average GC user and not for those whose entire life

revolves around capillary gas chromatography. The topics covered within these pages are based on the most common problems, questions, and misconceptions about capillary gas chromatography. These topics have been assembled and

presented in a  
unique, practical,  
and concise format  
suitable even for  
the most  
inexperienced user.  
The author has not  
changed his  
successful approach  
to the topic in the  
present third  
edition. Instead, he  
has focused on  
updating and

correcting the text  
of the widely  
acclaimed second  
edition.

PREFACE The Joint FAO/IAEA Division of Nuclear Techniques in Food and Agriculture is involved in agricultural research and development and assists Member States of FAO and IAEA in

*Page 57/93*

improving strategies to ensure food security through the use of nuclear techniques and related biotechnologies, where such techniques have a valuable and often unique role. In particular, molecular diagnostic methods have rapidly evolved in the past twenty

*Page 58/93*

years, since the advent of the Polymerase Chain Reaction (PCR). They are used in a wide range of agricultural areas such as, improving soil and water management; producing better crop varieties; diagnosing plant and animal diseases; controlling insect pests and

*Page 59/93*

improving food  
quality and safety.  
The uses of nucleic  
acid-directed methods  
have increased  
significantly in the  
past five years and  
have made important  
contributions to  
disease control  
country programmes  
for improving national

trade. These developments include the more routine use of PCR as a diagnostic tool in veterinary diagnostic laboratories.

However, there are many problems associated with the transfer and particularly, the application of this

*Page 61/93*

technology. These include lack of consideration of: the establishment of quality-assured procedures, the required set-up of the laboratory and the proper training of staff. This can lead to a situation where results are not assured. This book gives a

*Page 62/93*

comprehensive  
account of the  
practical aspects of  
PCR and strong  
consideration is given  
to ensure its optimal
