

Chapter 16 Development Stem Cells And Cancer

Biology in Focus - Chapter 16 - SlideShare

Chapter 16: Development, Stem Cells and Cancer A Genetic Program for Embryonic Development The transformation from zygote to adult results from cell division, cell differentiation, and morphogenesis Cell differentiation: cells become specialized in structure and function The physical processes that give an organism its shape (or form) constitute morphogenesis Differential gene expression results from genes being regulated differently in each cell type Cytoplasmic Determinants and Inductive ...
