When, as criteria of efficacy, a log reduction  $> 3$  of the infectious viral titre on both surrogates and in the three tests is used, the most efficacious disinfectants in this study appear to be biocidal products B, C and D, representing the halogens, the oxidizing agents group and a mix of QAC, alcohol and aldehyde, respectively.

We evaluated the virucidal efficacy of seven hand sanitizers containing various active ingredients, such as ethanol, triclosan, and chlorhexidine, and compared their effectiveness against feline calicivirus (FCV), murine norovirus (MNV), and a GII.4 norovirus fecal extract. We also tested the efficacy of 50, 70, and 90% of ethanol and isopropanol.

Glutaraldehyde (GTA) is a potent virucidal disinfectant whose exact mode of action against enteroviruses is not understood. Earlier reports showed that GTA reacts preferentially with the VP1 capsid protein of echovirus 25 and poliovirus 1 and that GTA has affinity for exposed lysine residues on proteins.

#### **Virucidal Efficacy of Glutaraldehyde against Enteroviruses ...**

seven conventional and seven paper-reagent strip tests was completed on all 291 strains. With the exception of certain stock strains of Salmonella, Shigella, Edwardsiella, and Arizona, all strains were isolates collected in the clinical laboratories of either the University of Washington Hospital or the University of Minnesota Hospital. Cultural procedures.
