Complex predicates can be defined as predicates which are composed of more than one grammatical element (either morphemes or words), each of which contributes a non-trivial part of the information of the complex predicate. The papers collected in this volume, which were presented at a workshop at Stanford in 1993, represent a variety of approaches to the question of the range and nature of complex predicates, and draw on data from a wide spectrum of languages.

In linguistics, a compound verb or complex predicate is a multi- word compound that functions as a single verb. One component of the compound is a light verb or vector, which carries any inflections, indicating tense, mood, or aspect, but provides only fine shades of meaning. The other, "primary", component is a verb or noun which carries most of the semantics of the compound, and determines its arguments.

Define compound predicate: the definition of compound predicate is a predicate that has two or more verbs or verb phrases. In summary, a compound predicate: is a part of an independent clause. contains one subject and multiple verbs/verb phrases. joins the verbs/verb phrases with a conjunction.

For one, there is the perennial issue of identifying a complex predicate (vs. instances of modality, auxiliation or serial verb constructions). Baker and Harvey (this volume) claim a fundamental distinction between two types of complex predicate constructions: coverb constructions, typically those involving a light verb, and serial verb constructions (henceforth SVCs) in terms of their respective expression of eventhood. They argue that while both coverb constructions and SVCs are monoclausal, they contrast in their event structure: coverb constructions express a single simple event, albeit one that may be semantically complex ...

Scrambling and fronting data are used to argue that all these constructions-except the depictive secondary predicates, which are treated as adjunct-should be treated as complex predicates. The potential for a verb to enter a resultative construction or to form a particle verb that follows a productive pattern is licensed by lexical rules.
