

Corus Corrosion Protection Guide

Corus Construction & Industrial
COATINGS - SCNZ

Guidelines and recommendations for the protection against corrosion of iron and steel in structures. General principles of design and corrosion resistance. BSI ? 8.0 8.1 BS EN ISO 2063-1: 2017, Thermal spraying, Zinc, aluminium and their alloys, Design considerations and quality requirements for corrosion protection systems, BSI This document is intended to provide guidance to engineers and architects concerned with the design of new buildings. It suggests a range of corrosion protection systems for the structural framework of buildings which will be clad and protected from the weather. Where possible the document is in accordance with existing and proposed standards and represents a consensus of the experience of different European countries.

steel structures. There are a number of solutions recommended for corrosion protection, based mainly on the corrosivity class (C1 to C5). The anticorrosive systems described in this document are based on reference standards or codes of practice. This guide contains a non-exhaustive list of existing corrosion protection systems.

Guide to protection of steel against corrosion

Corrosion protection Cost effective corrosion protection of structural steelwork should present little difficulty for common applications and environments if the factors that affect durability are recognised at the outset. There are many steel structures that have

continued in use satisfactorily for many years even in adverse conditions.
