This book presents a comprehensive and detailed study of literacy practices and language use outside of the classroom by university students of Japanese. It investigates both tasks related to classes (e.g. homework and preparation for classes) and voluntary activities in the target language (e.g. watching TV and writing emails) and discusses how values, motivations and types of activities differ between the two contexts. It employs sociocultural perspectives to observe reading and writing activities within and under the influence of individual and social contexts, such as learner motives, peer networks and the language classroom, and contributes to the related research areas in the field of second language acquisition, such as motivation, autonomous language learning and language learning strategies. Crucially, the book not only documents out-of-class literacy activities, but also examines which teaching practices facilitate and promote such out-of-class language learning and use. It considers which literacy activities in the target language students undertake out-of-class, which factors encourage or discourage such out-of-class activity and how and with which tools they undertake these activities. As such the book provides guidance for classroom teaching and suggests that slight changes to teaching practices in the classroom may enhance autonomous learning outside the classroom.

Part 3 involves language and formal education: what languages, Zambian and foreign, are used at various levels int he schools, which are taught, with what curricula, methods, how teachers are trained, how issues such as adult literacy are approached and with what success.

This unique and ground-breaking book is the result of 15 years research and synthesises over 800 meta-analyses on the influences on achievement in school-aged students. It builds a story about the power of teachers, feedback, and a model of learning and understanding. The research involves many millions of students and represents the largest ever evidence based research into what actually works in schools to improve learning. Areas covered include the influence of the student, home, school, curricula, teacher, and teaching strategies. A model of teaching and learning is developed based on the notion of visible teaching and visible learning. A major message is that what works best for students is similar to what works best for teachers – an attention to setting challenging learning intentions, being clear about what success means, and an attention to learning strategies for developing conceptual understanding about what teachers and students know and understand. Although the current evidence based fad has turned into a debate about test scores, this book is about using evidence to build and defend a model of teaching and learning. A major contribution is a fascinating benchmark/dashboard for comparing many innovations in teaching and schools.

An easy to use guide for adults.
