"Design Methods for Reactive Systems is a most welcome addition to the literature on systems and software engineering. It is serious and balanced, refreshingly general and hype-free, and is one of the very few books in this area that is not a user manual for a particular methodology. It concentrates admirably on the difficult subject of ...

The Reactive System Screening Tool (RSST TM) was introduced by FAI in 1989 to provide an easy, inexpensive approach to the DIERS testing method. Recent enhancements led to the Advanced RSST (ARSST TM) in 1999. FAI uses the DIERS-based VSP2 TM and ARSST TM calorimeters to characterize chemical systems and design emergency pressure relief systems ...

Large systems are composed of smaller ones and therefore depend on the Reactive properties of their constituents. This means that Reactive Systems apply design principles so these properties apply at all levels of scale, making them composable.

The Reactive Manifesto

Human-centered design is a practical, repeatable approach to arriving at innovative solutions. Think of these Methods as a step-by-step guide to unleashing your creativity, putting the people you serve at the center of your design process to come up with new answers to difficult problems.
