Here's how a power steering pump works to provide pressure to the power steering rack on your car. A power steering pump is essentially a vane pump. Inside, ...

~~How a Power Steering Pump Works - YouTube~~

Hydraulic power steering systems work by using a hydraulic system to multiply force applied to the steering wheel inputs to the vehicle's steered (usually front)

road wheels. The hydraulic pressure typically comes from a gerotor or rotary vane pump driven by the vehicle's engine. A double-acting hydraulic cylinder applies a force to the steering gear, which in turn steers the roadwheels.
