Fine-needle aspiration cytology (FNAC) has been commonly used to follow up on previously treated sarcomas or to confirm soft tissue and bone metastases of carcinomas, melanomas or lymphomas. Its role as the first-line approach in the diagnosis of primary soft tissue and bone tumors has increased due to progress of less invasive diagnostic procedures and the growing availability of diagnostic ancillary tests. This comprehensive and richly-illustrated volume presents cytomorphology of all common neoplastic soft tissue and bone lesions but also of rare tumors largely described in case reports. Key points for cytological features, differential diagnosis, and the use of ancillary tests are discussed and illustrated in order to facilitate the diagnostic work-up in FNA samples. The volume is organized on the basis of the most recent WHO classification used in surgical pathology in order to provide a practical guide for modern cytologic diagnosis of surgical soft tissue and bone pathology. It is aimed mainly at surgical pathologists and cytopathologists, but also at orthopedic surgeons and clinical oncologists.

The cytologic method of pathology is now one of the most widely used diagnostic modalities worldwide. This new and practical text in cytopathology is an organ-based guide for professionals in which malignant and benign tumors are the predominant focus, but the full spectrum of infectious and inflammatory disorders will also be presented in detail, and in both adult and pediatric populations. Coverage is not limited to findings from only the light microscope but also includes many examples of other genetic, molecular, and immunologic diagnostic modalities, giving pathologists diagnostic and clinical criteria needed when formulating a diagnosis and differential diagnosis. With more than 2,000 color photomicrographs and an ancillary website of an additional 600 images, *Differential Diagnosis in Cytopathology* proves to be the most comprehensive text in a market in which no other has focused exclusively on essential diagnostic criteria.
