Optics figures centrally in Descartes' The World, or Treatise on Light, written between 1629 and 1633, as well as, of course, in his Dioptrics published in 1637. It also, however, plays important roles in the three essays published together with the Dioptrics, namely, the Discourse on Method, the Geometry, and the

05 Descartes Optics The Cambridge Descartes Lexicon 6. The Method in Optics: Deducing the Law of Refraction. Descartes' discovery of the law of refraction is arguably one of his most celebrated scientific achievements. We have already encountered the law of refraction in Descartes' discussion of the anaclastic line in Rule 8 (see Section 3). There, the law of refraction appears as the solution to the penultimate problem, "What is the relation (ratio) between the angle of incidence and the angle of refraction?"

Descartes' Method (Stanford Encyclopedia of Philosophy)

Descartes' Dioptrics finally appeared in print together with the Discourse on Method, the Meteorology and the Geometry in the summer of 1637 in a French language edition. It was republished in a Latin edition (without the Geometry) in 1644. The subject matter of the Dioptrics may be thought of as covering
