Figure 1: A discrete time control input with zero order hold applied to a continuous time system. $G_k j 1Hu(j) : (11)$ For stability, the eigenvalues of G must have magnitude <1 . So if the continuous time plant is stable ($< eig(A) <0$) the discrete time plant will have eigenvalues with magnitude less than 1.

Discrete-Time Control Systems 1995.

Discrete time control systems. The standard number system used for processing digital signals is the binary number system. In this system the code group consists of n pulses each indicating either "on" (1) or "off" (0). In the case of quantizing, n "on-off" pulses can represent 2^n amplitude levels or output states.
