'Compassion, in its many manifestations, is the key to rediscovering what lies at the heart of nursing practice all over the world. It is absolutely essential that nurses start to revisit compassion as a central focus for nursing practice...' This user-friendly book adopts a patient-centred approach to care. The challenging theories are grounded in practical applications, encouraging readers to recognise opportunities for change in their daily practice. The book focuses on six key concepts central to compassionate care: A*

One of the most time-consuming tasks in clinical medicine is seeking the opinions of specialist colleagues. There is a pressure not only to make referrals appropriate but also to summarize the case in the language of the specialist. This book explains basic physiologic and pathophysiologic mechanisms of cardiovascular disease in a straightforward manner, gives guidelines as to when referral is appropriate, and, uniquely, explains what the specialist is likely to do. It is ideal for any hospital doctor, generalist, or even senior medical student who may need a cardiology opinion, or for that ma.

An Essay on Montaigne

Report

Language Policies in Action

Through an interpretation of Montaigne's philosophical vision as expressed in his Essays, Ermanno Bencivenga contributes to the current debate about the "death of the subject" by developing a view of the self as a project of continuous construction rather than the source and foundation of knowledge. This latter, Cartesian conception of self-consciousness as a logical and epistemological starting point is, Bencivenga contends, delusive: the certainty it provides is more akin to faith than to a cognitive state. How then do we acquire knowledge of the self? Montaigne makes for a productive case study in this regard: he declares that he himself is the matter of his book, and that nothing but the constitution of his own self is his business. A study of Montaigne reveals that the fundamental category missing in the Cartesian conception of the self is that of practical effort. The self is not a ready-made entity, available for inspection and analysis, but something whose generation requires exercise, training, and discipline. It is the result of an operation that must be performed not just once, but, as in all training, over and over again until it becomes second nature. Bencivenga characterizes the particular training required by the project of constituting a subject as a revolutionary, transgressive, critical one, which shares with philosophical activity a profoundly playful irrelevance to the "ready to hand." Prepare yourself for discoveries and new adventures with this incredible book about the true origin of wanderlust. This edition forms a complete history of the earliest start and progress of navigation, discovery, and commerce, by sea and land, from the earliest ages to the early 19th century. First part of the work covers voyages and travels of discovery in the middle ages; from the era of Alfred, King of England, in the ninth century to that of Don Henry of Portugal at the commencement of the fourteenth century. Second part deals with general voyages and travels chiefly of discovery; from the era of Don Henry, in 1412, to that of George III. in 1760. The rest of the work has some particular voyages and travels arranged in systematic order, Geographical and Chronological, and studies voyages during the era of George III conducted upon scientific principles, by which the Geography of the globe has been nearly perfected.

This book is a collection of articles which deal with adpositions in a variety of languages and from a number of perspectives. Not only does the book cover what is traditionally treated in studies from a European and Semitic orientation – prepositions, but it presents studies on postpositions, too. The main languages dealt with in the collection are English, French and Hebrew, but there are articles devoted to other languages including Korean, Turkic languages, Armenian, Russian and Ukrainian. Adpositions are treated by some authors from a semantic perspective, by others as syntactic units, and a third group of authors distinguishes adpositions from the point of view of their pragmatic function. This work is of interest to students and researchers in theoretical and applied linguistics, as well as to those who have a special interest in any of the languages treated.

A Complete Concordance to the Book of Mormon

This updated edition of a widely successful book offers sound, practical guidance for attaining the best possible future for yourself. Written by David P. Campbell, co-creator of the popular Strong-Campbell Interest Inventory, this easy-to-read book urges you to do things you like, things that interest you, and things you can do well, emphasizing how the daily choices you make will bring you closer to your ideal future. Campbell offers a simple method for setting goals, followed by advice for prioritizing, pursuing, and ultimately realizing those goals as a means to securing the future you've hoped and planned for.

Boris (psychoanalysis, Harvard Medical School) says that while we are going about our personal concerns, pursuing pleasure and ego gratification, we are also being influenced by a force that causes us to identify with the aims of the Group, even if it means we individually fail to thrive, or even die. He synthesizes three approaches: classical psychology; recent interpersonal and object-relations psychology; and current selectivistic evolutionary biology. The Power of Negativity

This book constitutes the proceedings of the 23rd International Conference on Compiler Construction, CC 2014, which was held as part of the European Joint Conferences on Theory and Practice of Software, ETAPS 2014, which took place in Grenoble, France, in April 2014. The 10 full papers and 4 tool papers included in this volume were carefully reviewed and selected from 47 submissions; the book also contains one invited talk. The papers are organized in topical sections named: program analysis and optimization; parallelism and parsing and new trends in compilation.

This monograph presents a morpho-syntactic investigation on modality, aspect, and negation by concentrating on Persian, and is designed to contribute to theoretical linguistics and the study of Iranian languages. The analysis is based on the Minimalist program. This research challenges the idea that the syntactic structure maps on the semantic interpretation or vice versa. The discussion presented in this monograph shows that the syntactic structure of Persian modals is uniform no matter if the modals are interpreted as having root or epistemic readings. Although it is claimed that modals are raising constructions in different languages, modals in Persian, which does not have subject-raising constructions, show a different syntactic behavior. Furthermore, the structural analysis of the interaction of Persian modals and negation shows that because of the scope interaction of negation and modals, the syntactic structure of modals with respect to negation mostly corresponds to the semantic interpretation of modals.

The Discipline of Subjectivity

Structuring Sense explores the difference between words however defined and structures however constructed. It sets out to demonstrate over three volumes that the explanation of linguistic competence should be shifted from lexical entry to syntactic structure, from memory of words to manipulation of rules. Its reformulation of how grammar and lexicon interact has profound implications for linguistic, philosophical, and psychological theories about human mind and language. Hagit Borer departs from language specific constructional approaches and from lexicalist approaches to argue that universal hierarchical structures determine interpretation, and that language variation emerges from the morphological and phonological properties of inflectional material.

Taking Form, the third and final volume of Structuring Sense, applies this radical approach to the construction of complex words. Integrating research in syntax and morphology, the author develops a new model of word formation, arguing that on the one hand the basic building blocks of language are rigid semantic and syntactic functions, while on the other hand they are roots, which in themselves are but packets of phonological information, and are devoid of both meaning and grammatical properties of any kind. Within such a model, syntactic category, syntactic selection and argument structure are all mediated through syntactic structures projected from rigid functions, or alternatively, constructed through general combinatorial principles of syntax, such as Chomsky's Merge. The meaning of 'words', in turn, does not involve the existence of lexemes, but rather the matching of a well-defined and phonologically articulated syntactic domain with conceptual Content, itself outside the domain of language as such. In a departure from most current models of syntax but in line with many philosophical traditions, then, the Exo-Skeletal model partitions 'meaning' into formal functions, on the one hand, and Content, on the other hand. While the former are read off syntactico-semantic structures as is usually assumed, Content is crucially read off syntactico-phonological structures.

This monograph presents recent developments in quantum field theory at finite temperature. By using Lie groups, ideas from thermal theory are considered with concepts of symmetry, allowing for applications not only to quantum field theory but also to transport theory, quantum optics and statistical mechanics. This includes an analysis of geometrical and topological aspects of spatially confined systems with applications to the Casimir effect, superconductivity and phase transitions. Finally, some developments in open systems are also considered. The book provides a unified picture of the fundamental aspects in thermal quantum field theory and their applications, and is important to the field as a result, since it combines several diverse ideas that lead to a better

understanding of different areas of physics.

Examining the role of implicit, unconscious thinking on reasoning, decision making, problem solving, creativity, and its neurocognitive basis, for a genuinely psychological conception of rationality. This volume contributes to a current debate within the psychology of thought that has wide implications for our ideas about creativity, decision making, and economic behavior. The essays focus on the role of implicit, unconscious thinking in creativity and problem solving, the interaction of intuition and analytic thinking, and the relationship between communicative heuristics and thought. The analyses move beyond the conventional conception of mind informed by extra-psychological theoretical models toward a genuinely psychological conception of rationality—a rationality no longer limited to conscious, explicit thought, but able to exploit the intentional implicit level. The contributors consider a new conception of human rationality that must cope with the uncertainty of the real world; the implications of abandoning the normative model of classic logic and adopting a probabilistic approach instead; the argumentative and linguistic aspects of reasoning; and the role of implicit thought in reasoning, creativity, and its neurological base. Selected Writings on the Dialectic in Hegel and Marx

Raya Dunayevskaya is hailed as the founder of Marxist-Humanism in the United States. In this new collection of her essays co-editors Peter Hudis and Kevin B. Anderson have crafted a work in which the true power and originality of Dunayevskaya's ideas are displayed. This extensive collection of writings on Hegel, Marx, and dialectics captures Dunayevskaya's central dictum that, contrary to the established views of Hegelians and Marxists, Hegel was of signal importance to the theory and practice of Marxism. The Power of Negativity sheds light not only on Marxist-Humanism and the rooting of Dunayevskaya's Marxist-Humanist theories in Hegel, but also on the life of one of America's most penetrating and provocative critical thinkers.

This text examines American norms of masculinity and their role in the law, with essays from legal academics, literary scholars, and judges. Together, these papers reinvigorate the law-and-literature movement by bringing a range of methodological and disciplinary perspectives to bear on the complex interactions of masculinity with both law and literature - ultimately shedding light on all three.
