

Dry Needling Medical Policy Manual

Dry needling is almost always used as a part of an overall plan that will likely include some type of exercise, manual therapy, heat therapy, and education. Dry needling is used to increase range of motion that may be limited due to muscle tightness or scar tissue. Dry needling may also treat: Joint problems; Disk problems; Tendinitis

Dry Needling of Myofascial Trigger Points
Dry needling refers to a procedure in which a fine needle is inserted into the skin and muscle at a site of myofascial pain. The needle may be moved in an up-and-down motion, rotated, and/or left in place for as long as 30 minutes.
