One part diary, one part guide to the arcane practices of the funniest creation in modern fantasy, 100% Discworld goodness. With their trademark mix of cultural ephemera, background detail and hilarious one-liners, the Discworld diaries are back. And 2016's diary gives a long-awaited insight into the wit and wisdom of some of the Discworld's most-loved characters, the Witches. Or, as Granny Weatherwax puts it: "I don't hold with diaries. If a witch don't know where she's been or where she should be, no amount of writing it down in long and diverse letters will make any difference. There are some who say that making a note of birthdays and the like will mean you get a lot of presents but I think Gytha is wrong. But suit yourself. Personally I can't be doing with it." ~ Esme Weatherwax

A Study of Theology and Culture

A unique study of the link between theology and culture from a sociological perspective which addresses the issue of the pursuit of enchantment in the context of postmodernity. Sociology is applied to sociology itself to discern its own domestic response to theological readings of culture. A novel reading of Simmel, Bourdieu and Weber in relation to the Swiss Catholic theologian, Hans Urs von Balthasar, produces a controversial critique of assumptions regarding religious belief in the context of debates on secularisation and postmodernity. This book presents a holistic approach to women's midlife and menopause transitions. It provides a balanced approach giving the expected benefits and side effects of western medical and complementary therapies for the entire range of menopausal concerns. Comprehensive information provided in a user-friendly way, including a matrix for finding western and alternative therapies for each symptom. Contained are graphs, illustrations, charts and worksheets to enhance learning and allow women to individualize the material. Special focus is placed on art that represents expansive, powerful, and symbolic aspects of women's beings; including a wide array of goddess and mythic images. The path of women's spiritual unfolding is described, with its

unique features as they connect with the feminine divine. Women are brought in touch with their long heritage of archetypes in history and myth, and given guidance in drawing from the energies of archetypes to bring deeper aspects of the self into expression. (key words: midlife, menopause, holistic, middle aged)

Fascinating facts, figures, and pictures highlight informative text about some of the most interesting and extreme jobs that use technology. Young readers will learn what kind of training it takes to be a roller coaster designer, how much money a space robotics engineer makes, and what exactly a wind turbine technician does!

This book is a survey of typical Science Fiction elements in Douglas Adams's Hitchhiker's Guide to the Galaxy. Christian Erkenbrecher first goes through a short history of Science Fiction and identifies certain motifs of the genre in order to correctly place the novel within a useful context. Classical elements of the Science Fiction canon are identified in the novel and scrutinized. It becomes clear that Douglas Adams was fully aware of the SF "burden" and we can see how its elements are used in order to create both humour and criticism. The question of whether social criticism can be applied purposefully in SF will be asked. Other big questions which are posed (and answered?) in Hitchhikers are also taken into consideration: Is there a god? Will the breakdown of communication barriers between races put an end to all wars? Can the advancement of technology prevent us from destroying ourselves? Follow the author on his way through Douglas Adams's "wholly remarkable book" and see how this exceptional hitchhiking playwright and atheist writer enriched the world with his unique prose.

I met Bob Doroghazi when he dropped the first draft of his manuscript of The Physician 's Guide to Investing: A Practical Approach to Building Wealth at my office. I will have to admit I was a bit skeptical: a physician writing a book on investments? During that first meeting with Bob, it became evident that he had been a successful physician and a successful investor, so I agreed to take a look at the book. I was in for a pleasant surprise. Bob 's manuscript was easy to read and had specific advice useful to physicians, interspersed with lots of practical tidbits for any investor. Having written three college-level finance and investment texts, I was excited to be in on a project aimed at offering practical investment advice to a more general, yet specialized, audience. I had high expectations for the book and

am pleased to say that I believe Bob has delivered a book that every physician interested in building wealth and protecting assets should read. Bob is a straight shooter; he tells it like he sees it in his book. Some doctors might be indignant on reading his statements, such as "Physicians sometimes have no idea of their limitations. This type of arrogance and ego can result in investing disaster." However, if you do have these limitations (and most professionals, even college professors, do), then reading Bob's book will help you recognize situations in which they can lead to poor investment decisions.

"I can think of no better guides than Professors Ken Gregory and John Lewin to lead the reader through the conceptual basis of this exciting science." - Victor R. Baker, University of Arizona "A very readable and informative introduction to the discipline for senior undergraduates, postgraduates and researchers." - Angela Gurnell, Queen Mary University of London "Time will tell, but this book may well mark a turning point in the way students and scientists alike perceive Earth surface processes and landforms." - Jonathan Phillips, University of Kentucky This student focused book provides a detailed description and analysis of the key concepts, ideas, and hypotheses that inform geomorphology. Kenneth Gregory and John Lewin explain the basics of landform science in 20 concepts, each the subject of a substantive, cross-referenced entry. They use the idea of the 'geomorphic system' to organise entries in four sections, with extensive web resources provided for each: System Contexts: The Systems Approach / Uniformitarianism / Landform / Form, Process and Materials / Equilibrium / Complexity and Non Linear Dynamical Systems System Functioning: Cycles and cascades / Force-Resistance / Geomorphic work / Process Form Models System Adjustments: Timescales / Forcings / Change Trajectories / Inheritance and Sensitivity / Anthropocene Drivers for the Future: Geomorphic Hazards / Geomorphic Engineering / Design and Prediction Aligned with the teaching literature, this innovative text provides a fully-functioning learning environment for study, revision, and even self-directed research for both undergraduate and postgraduate students of geomorphology.

The International Journal of Technology, Knowledge and Society creates a place for the publication presenting innovative theories and practices relating technology to society. It is cross-disciplinary in its scope and provides a meeting point for technologists with a concern for the social and social scientists with a concern for the technological. The focus is primarily, but not exclusively, on information and communications technologies. Equally interested in the mechanics of social technologies and the social impact of technologies, the journal is guided by the ideals of an open society, where technology is used to address human needs and serve community interests. These concerns are grounded in the values of creativity, innovation, access, equity and personal and community autonomy. In this space, commercial and community interests at times complement each other; at other times they appear to be at loggerheads. The journal will examine the nature of the new technologies, their connection with community, their use as tools for learning, and their place in a 'knowledge society'. The perspectives presented range from big picture analyses which address global and universal concerns, to detailed case studies which speak of localised social applications of technology. The papers traverse a broad terrain, sometimes technically and other times socially oriented, sometimes theoretical and other times practical in their perspective, and sometimes

reflecting dispassionate analysis whilst at other times suggesting interested strategies for action. The journal is relevant for academics in the fields of informatics, computer science, history and philosophy of science, sociology of knowledge, sociology of technology, education, management and the humanities; research students; technology developers and trainers and industry consultants. The International Journal of Technology, Knowledge and Society is peer-reviewed, supported by rigorous, criterion-referenced article ranking and qualitative commentary processes, ensuring that only intellectual work of significance is published.

Space was at the center of America's imagination in the 1960s. President John F. Kennedy's visionary statement captured the mood of the day: "We choose to go to the moon in this decade and do the other things, not because they are easy, but because they are hard." The Apollo mission's success in July 1969 made almost anything seem possible, but the Cold War made space flight the province of governmental agencies in the United States. When the Apollo program ended in 1972, space lost its hold on the public interest, as the great achievements wound down. Entrepreneurs are beginning to pick up the slack â looking for safer, more reliable, and more cost effective ways of exploring space.

Entrepreneurial activity may make create a renaissance in human spaceflight. The private sector can energize the quest for space exploration and shape the race for the final frontier. Space entrepreneurs and private sector firms are making significant innovations in space travel. They have plans for future tourism in space and safer shuttles. Solomon details current US and international laws dealing with space use, settlement, and exploration, and offers policy recommendations to facilitate privatization. As private enterprise takes hold, it threatens to change the space landscape forever. Individuals are designing spacecraft, start-up companies are testing prototypes, and reservations are being taken for suborbital space flights. With for-profit enterprises carving out a new realm, it is entirely possible that space will one day be a sea of hotels and/or a repository of resources for big business. It is important that regulations are in place for this eventuality. These new developments have great importance, huge implications, and urgency for everyone.
