An energy efficient and spectrum efficient wireless heterogeneous network framework for 5G systems.

Abstract: In this article we explore a system framework of cooperative green heterogeneous networks for 5G wireless communication systems. We first survey the state-of-the-art on spectrum efficiency (SE), energy efficiency (EE), and quality of service (QoS) based mobile association, multi-layer interference management and power control, network wide cooperation and

The deployment of the massive number of antennas at the transmitter and/or receiver can significantly enhance the spectrum and energy efficiency of the wireless network [9]. In a rich scattering environment, these performance gains can be achieved with simple beamforming strategies such as maximum ratio transmission or zero forcing [10]. Moreover, most of today's wireless systems operate at microwave frequencies below 6 GHz.
