GEOL1501: Introduction to Engineering Geology is designed to give an insight into the way in which geological environments affect decisions about the design and construction of large and small structures. The course will provide a thorough introduction to geology and then move on to apply this knowledge to site investigation for construction.

GEOL1501: INTRODUCTION TO ENGINEERING GEOLOGY

Engineering geology is the application of the geology to engineering study for the purpose of assuring that the geological factors regarding the location, design, construction, operation and maintenance of engineering works are recognized and accounted for. Engineering geologists provide geological and geotechnical recommendations, analysis, and design associated with human development and ...

Bachelor degree students should take an engineering degree and focus their minors and electives on geology and environmental science. Master's degrees are desirable for more advanced and senior roles and this is a specialized role so there are Engineering Geology degrees available at many colleges and universities across the country.
