This book offers an unparalleled analysis of the emerging law and economics of competition policy in Latin America. Nearly all Latin American countries now have competition laws and agencies to enforce them. Yet, these laws and agencies are relatively young. The relative youth of Latin American competition agencies and the institutional and political environment in which they operate limit the ability of agencies to effectively address anti-competitive conduct. Competition policy is a tool to overcome anti-market traditions in Latin America. Effective competition policy is critical to assisting in the growth of Latin American economies, their global competitiveness, and improving the welfare of domestic consumers. This book provides new region specific insights on how to better achieve these aims. This authoritative volume will be of particular interest to competition agencies, academics in law, economics and Latin American Studies, practitioners around the world in the areas of antitrust and competition policy, policymakers, and journalists.

The IFIP International Working Conference on Intelligent Networks '95 was held at the Technical University of Denmark (DTU) in Copenhagen. The conference was organised jointly by the Center for Tete-Information at DTU and Tele Danmark Research! during August 30-31 1995 and was hosted by the Center for Tete-Information. The conference was sponsored by IFIP TC6. The papers contained in this book are edited versions of the papers from the conference and some of the tutorial presentations that were arranged prior to the conference. The mixture of tutorial papers and conference papers gives a broad and yet thorough coverage of activities and central areas of development in the IN world at this point in time. Future developments, especially in the area of extended mobility support and multimedia capabilities, are also presented. **BACKGROUND** The theme of the conference was the two major trends in Intelligent Networks (IN) development: • ITU and ETSI based IN standards, such as CS-1 and the upcoming CS-2 and • long term development as undertaken by, for example, the TINA consortium and the European RACE and ACTS programmes. The present IN technology based on capability sets is on its way into the networks, and operators are pushing for open platforms to be deployed in the networks in the near future in order to obtain greater freedom in selecting platforms for service provisioning.

The 1968 sinking of K-129 occurred approximately 1,560 nautical miles (2,890 km) northwest of Hawaii. Project Azorian was one of the most complex, expensive, and secretive intelligence operations of the Cold War at a cost of about \$800 million (\$3.9 billion in 2017 dollars). Now, for the first time in print, is the official CIA history of the event. This document, secured by FOIA and heavily redacted but provides a detailed history from the CIA, of Howard Hughes daring plan to recover the sunken K-129.
