tables, Affordable Classics guarantees to keep the chase alive between episodes of Chasing Classic Cars. The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety

features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will

some technologies be more effective than others?  
Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy

Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Driving is a fact of life. We are all spending more and more time on the road, and traffic is an issue we face everyday. This book will make you think about it in a whole new light. We have always had a passion for cars and driving. Now Traffic offers us an exceptionally rich understanding of that passion. Vanderbilt explains why traffic jams form, outlines the unintended consequences of our

attempts to engineer safety and even identifies the most common mistakes drivers make in parking lots. Based on exhaustive research and interviews with driving experts and traffic officials around the globe, *Traffic* gets under the hood of the quotidian activity of driving to uncover the surprisingly complex web of physical, psychological and technical factors that explain how traffic works.

*The Prokaryotes* is a comprehensive, multi-authored, peer reviewed reference work on Bacteria and Achaea. This fourth edition of *The Prokaryotes* is organized to cover all taxonomic diversity, using the family level to delineate chapters. Different from other resources, this new Springer product includes not only taxonomy,

but also prokaryotic biology and technology of taxa in a broad context. Technological aspects highlight the usefulness of prokaryotes in processes and products, including biocontrol agents and as genetics tools. The content of the expanded fourth edition is divided into two parts: Part 1 contains review chapters dealing with the most important general concepts in molecular, applied and general prokaryote biology; Part 2 describes the known properties of specific taxonomic groups. Two completely new sections have been added to Part 1: bacterial communities and human bacteriology. The bacterial communities section reflects the growing realization that studies on pure cultures of bacteria have led to an incomplete picture of

the microbial world for two fundamental reasons: the vast majority of bacteria in soil, water and associated with biological tissues are currently not culturable, and that an understanding of microbial ecology requires knowledge on how different bacterial species interact with each other in their natural environment. The new section on human microbiology deals with bacteria associated with healthy humans and bacterial pathogenesis. Each of the major human diseases caused by bacteria is reviewed, from identifying the pathogens by classical clinical and non-culturing techniques to the biochemical mechanisms of the disease process. The 4th edition of *The Prokaryotes* is the most complete resource on the biology of prokaryotes.

The following volumes are published consecutively within the 4th Edition:

"I wrote this book because I

too. It took me a while to

Robot Building for Beginners,  
Third Edition provides basic,  
practical knowledge on

getting started in amateur robotics. There is a mix of content: from serious reference tables and descriptions to personal stories and humorous bits. The robot described and built in this book is battery powered and about the size of a lunch box. It is autonomous; that is, it isn't remote controlled. The book is broken up into small chapters, suitable for bedtime (or bathroom) reading. The characteristics and purposes of each major component (resistor, transistor, wire, and motor) are described,

followed by a hands-on experiment to demonstrate. Not only does this help the reader to understand a particular piece, but it also prepares them with processes to learn new parts on their own. An appendix offers an introduction to 3D printing and parts of the robot can, as an alternative, be "printed" using a 3D printer. The master project of the book is a simple, entertaining, line-following robot. Provides an overview of the sustainable energy crisis that is threatening the world's natural resources, explaining

how energy consumption is estimated and how those numbers have been skewed by various factors and discussing alternate forms of energy that can and should be used.

Alfa Romeo 916 GTV and Spider

A revised and updated edition of Hilary A. Raab Jr.'s Ferrari Serial Numbers Part I that covers all of the odd-numbered Ferraris (normally reserved for the Ferrari street cars) to serial number

21399.

This book is unique. It is a compendium of wonderful automotive treasure, as discovered. With the passage of time all cars became worthless and unloved, no matter how eminent. Racing cars inevitably became uncompetitive and redundant. Many vehicles passed into scrapyards, the motoring equivalent of a cemetery, or simply rotted away.

Alfa Romeo 916 GTV and Spider traces the complete story of the Alfa Romeo GTV and Spider models produced between 1994 - 2005, commonly known to enthusiasts by the manufacturer's project code as the 916 series. The 916 models would always be controversial - they replaced the iconic Spider, the best-selling Alfa Romeo sports model of all time, and the brand-establishing Alfetta

GTV. Sharing components and a platform with a humble Fiat hatchback, would the cars ever be considered 'real' Alfa Romeos? The cars were critically acclaimed, and, though they faced tough competition in the late 1990s from the likes of the Audi TT, they remained in production for over a decade. Topics covered include: Full history of the 916 series GTV and Spider models; Design, development and evolution of the models from 1994 - 2005; Participation of the GTV in motorsport; Model variations in depth through all three facelifts; Previously unpublished production figures, and chassis numbers for the desirable, limited-edition GTV Cup model. Comprehensively researched guide to the entire lifespan of the 916 series. Will appeal to Alfa Romeo

and automotive enthusiasts. The history and design process are examined along with an in-depth guide to each of the model variants produced. The cars' current position in the classic car market is considered. Superbly illustrated with 240 colour photographs. Robert Foskett is a life-long Italian car enthusiast with a special interest in Alfa Romeo.

We ' re told that the future will be brighter.

But what if human happiness really lies in the past? Hobart, 2022: a city with a declining population, in the grip of a dark recession. A rusty ship sails into the harbour and begins to unload its cargo on the site of the once famous but now abandoned Gallery of Future Art, known to the world as GoFA. Ferrari 308, 328 and 348 traces the complete story of the four models of Ferrari's V8-powered sports cars between 1973 and

1995 - the cars that broke Ferrari out of the V6 and V12 moulds, with the V8 becoming Ferrari's most popular engine choice in the final decade of the twentieth century. The book covers the history and development of Ferrari's new V8 engine, and the 308's daunting role as successor to the popular Dino. There are specification tables and production figures for the model variants, along with details of concept cars and other related models, and a review of competition exploits. The book also considers the cars' current position in the classic car market and offers insight into the rewarding ownership experience each of the models now represents. The book covers: design processes and styling by Bertone and Pininfarina; concept cars and rivals; the cars in competition; owning and running the cars today. With a guide through the entire lifespan of these exciting V8-powered sports cars and superbly illustrated with 295 colour

photographs, this is essential reading for the Ferrari aficionado.
