

Fixed And Le Terminal Antennas

This critical review looks at state-of-the-art mobile and fixed antennas, combining theory and practical design data. The text examines the subject of mobile terminals from the perspectives of market demand, systems concepts, services, applications and space service areas, including possible MSAT antenna configurations and L-band beam coverage for North America. This book should appeal to senior engineers, managers, designers and scientists in the field of mobile satellite communication.

The French-English volume of this highly acclaimed set consists of some 100,000 keywords in both French and English, drawn from the whole range of modern applied science and technical terminology.

Covers over 70 subject areas, from engineering and chemistry to packaging, transportation, data processing and much more.

Fundamentals and Applications

Minimum Thrust for Correcting Keplerian Orbits with Application to Interplanetary Guidance

Containing a Complete Enumeration and Description of All Plants Hitherto Known with Their Generic and Specific Characters, Places of Growth, Time of Flowering, Mode of Culture and Their Uses in

Medicine and Domestic Economy : Preceded by Introductions to the Linnaean and Natural Systems and a Glossary of the Terms Used ; Founded Upon Miller's Gardener's Dictionary and Arranged

With globalization in every area of human activity being a key trend of the 1990s, better and faster networks will have an increasingly important role and impact in making the 'global village' a reality. The papers collected in this volume highlight the global nature of the activities and the tremendous pace of R&D in the field of communications and networking.

Manual of Business German is the most comprehensive, single-volume reference handbook for students and professionals using foreign languages. Designed for all users, no matter what

level of language skill, it comprises five parts: * A 6000-word, two-way Glossary of the most useful business terms * A 100-page Written Communications section giving models of 50 letters, faxes and documents * An 80-page Spoken Situations section covering face-to-face and telephone situations * A short Reference Grammar outlining the major grammar features of German * A short Business Facts section covering essential information of the country or countries where German is used Written by an experienced native and non-native speaker team, this unique volume is an essential, one-stop reference for all students and professionals studying or working in business and management where German is used.

Arranged According to the Natural System

Electrostatic accelerators are an important and widespread subgroup within the broad spectrum of modern, large particle acceleration devices. They are specifically designed for applications that require high-quality ion beams in terms of energy stability and emittance at comparatively low energies (a few MeV). Their ability to accelerate virtually any kind of ion over a continuously tunable range of energies makes them a highly versatile tool for investigations in many research fields including, but not limited to, atomic and nuclear spectroscopy, heavy ion reactions, accelerator mass spectroscopy as well as ion-beam analysis and modification. The book is divided into three parts. The first part concisely introduces the field of accelerator technology and techniques that emphasize their major modern applications. The second part treats the electrostatic accelerator per se: its construction and operational principles as well as its maintenance. The third part covers all relevant applications in which electrostatic accelerators are the preferred tool for accelerator-based investigations. Since some topics are common to all types of accelerators, Electrostatic Accelerators will also be of value for those more familiar with other types of accelerators.

The Complete Financial, Legal, and Practical Guide to Living with Cancer, HIV, and Other Life-Challenging Conditions

Most industrial robots today have little or no sensory capability. Feedback is limited to information about joint positions, combined with a few interlock and timing signals. These robots can function only in an environment where the objects to be manipulated are precisely located in the proper position for the robot to grasp (i. e. , in a structured environment). For many present industrial applications, this level of performance has been adequate. With the increasing demand for high performance sensor-based robot manipulators in assembly tasks, meeting this demand and challenge can only be achieved through the consideration of: 1) efficient acquisition and processing of internal/external sensory information, 2) utilization and integration of sensory information from various sensors (tactile, force, and vision) to acquire knowledge in a changing environment, 3) exploitation of inherent robotic parallel algorithms and efficient VLSI architectures for robotic computations, and finally 4) system integration into a working and functioning robotic system. This is the intent of the Workshop on Sensor-Based Robots: Algorithms and Architectures - to study the fundamental research issues and problems associated with sensor-based robot manipulators and to propose approaches and solutions from various viewpoints in improving present day robot manipulators in the areas of sensor fusion and integration, sensory information processing, and parallel algorithms and architectures for robotic computations.
