Gas Heater Wikipedia

A gas heater is a space heater used to heat a room or outdoor area by burning natural gas, liquefied petroleum gas, propane or butane.. Indoor household gas heaters can be broadly categorized in one of two ways: flued or non-flued, or vented and unvented

Gas heater - Wikipedia

A gasoline heater is a small, mounted or portable, gasoline-fueled, space-heating device.. In the United States they were used mainly for supplemental heat for the passenger compartments of automobiles and aircraft. Some aircraft continue to use gasoline heaters.

Gasoline heater - Wikipedia

A space heater is a device used to heat a single, small area; central heating is used to heat many connected areas, such as the rooms of a house. Space heaters are powered by electricity or a burnable fuel, such as natural gas, propane, fuel oil, or wood pellets.Portable space heaters are usually electric, because a permanent exhaust is needed for heaters which burn fuel.

Space heater - Wikipedia

A storage water heater, or a hot water system (HWS), is a domestic water heating appliance that uses a hot water storage tank to maximize heating capacity and provide instantaneous delivery of hot water. Conventional storage water heaters use a variety of fuels, including natural gas, propane, fuel oil, and electricity.

Storage water heater - Wikipedia

The district heating system can use heat sources impractical to deploy to individual homes, such as heavy oil, wood byproducts, or (hypothetically) nuclear fission. The distribution network is more costly to build than for gas or electric heating, and so is only found in densely populated areas or compact communities.

Central heating - Wikipedia

An oil heater, also known as an oil-filled heater, oil-filled radiator, or column heater, is a common form of convection heater used in domestic heating.Although filled with oil, it is electrically heated and does not involve burning any oil fuel; the oil is used as a heat reservoir (buffer), not as a fuel.

Oil heater - Wikipedia

A water heater heats water, so occupants can wash in warm or hot water. In some cases the heated water is used to heat the home with water or steam radiators. How water piping can also be wisely placed to provide other benefits, like heating a bathroom's tile floor. If a hot water heater is not...

Water heater | Home Wiki | Fandom

An infrared heater or heat lamp is a body with a higher temperature which transfers energy to a body with a lower temperature through electromagnetic radiation. Depending on the temperature of the emitting body, the wavelength of the peak of the infrared radiation ranges from 780 nm to 1 mm. No contact or medium between the two bodies is needed for the energy transfer.

Top 9 Natural Gas Garage Heaters of 2019 | Video Review

Water heating is a heat transfer process that uses an energy source to heat water above its initial temperature. Typical domestic uses of hot water include cooking, cleaning, bathing, and space heating. In industry, hot water and water heated to steam have many uses.. Domestically, water is traditionally heated in vessels known as water heaters, kettles, cauldrons, pots, or coppers.

Water heating - Wikipedia

Electric Heating vs Gas Heating comparison. Electric heaters are cheaper, easier to install and do not need a chimney like gas heaters do. However, gas heating has lower operational costs because gas is usually cheaper than electricity and gas heaters are better at warming up larger spaces. Electric...
