

Gender And Climate Change Impacts Science Policy

Climate change and gender is a way to interpret the disparate impacts of climate change on men and women, based on the social construction of gender roles and relations. Climate change increases gender inequality, reduces women's ability to be financially independent, and has an overall negative impact on the social and political rights of women, especially in economies that are heavily based on agriculture. In many cases, gender inequality means that women are more vulnerable to the negative ef

A survey of the academic literature suggests that there is a lack of research into the many gender dimensions of climate change. The small amount of gender-sensitive work that exists has been carried out by gender, environment and development (GED) researchers working for the UN and non-governmental organisations who focus almost exclusively on the material impacts of climate change on vulnerable women in the Global South.

The Earth ' s climate is changing already and failure to limit warming to below 2 ° C could make the changes in the climate system irreversible and characterized by cataclysmic consequences. The adverse impacts of climate change continue to overly burden the poorest and the most vulnerable, especially poor women.
