"The text is suitable

for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book

Page 5/32

meets the needs of a
variety of
programs."--Page 1.

The first

International

Conference on

Intelligent Tutoring

Systems (ITS) was

Page 7/32

held ten years ago in Montreal (ITS '88). It was so well received by the international community that the organizers decided to do it again in Montreal four years later, in 1992, and then again in 1996. ITS

Page 8/32

'98 differs from the previous ones in that this is the first time the conference has been held outside of Montreal, and it's only been two years (not four) since the last one. One interesting aspect of the ITS

Page 9/32

conferences is that they are not explicitly bound to some organization (e.g., IEEE or AACE). Rather, the founder of these conferences, Claude Frasson, started them as a means to congregate

Page 10/32

researchers actively involved in the ITS field and provide a forum for presentation and debate of the most currently challenging issues. Thus the unifying theme is science. This year's "hot topics" differ from

Page 11/32

those in the earlier ITS conferences as they reflect ever changing trends in ITS research. A few of the issues being examined at ITS '98 include:
Web based tutoring systems,
deploying ITS in the real world,

Page 12/32

tutoring and
authoring tools,
architectures, and
knowledge
structure and
representation.

Precalculus is adaptable and designed to fit the needs of a variety of precalculus courses. It is a comprehensive text that

covers more ground than a typical one- or two-semester college-level precalculus course. The content is organized by clearly-defined learning objectives, and includes worked

examples that demonstrate problem-solving approaches in an accessible way. Coverage and Scope

Precalculus contains twelve chapters, roughly divided into three groups.

Page 24/32

Chapters 1-4
discuss various
types of
functions,
providing a
foundation for
the remainder
of the course.

Chapter 1:

Functions

Chapter 2:

Linear

Functions

Page 25/32

Chapter 3:
Polynomial and
Rational
Functions
Chapter 4:
Exponential and
Logarithmic
Functions
Chapters 5-8
focus on
Trigonometry.
In Precalculus,
we approach

Page 26/32

trigonometry by first introducing angles and the unit circle, as opposed to the right triangle approach more commonly used in College Algebra and Trigonometry courses.

Page 27/32

Chapter 5:
