Homework assignments and solutions will be posted here. ... Goldstein, 3rd edition, Chapter 9, problems 21, 24, 25; additional problem #1: See below ... effective potential analysis to the resulting set of differential equations similar to the central force problems in Goldstein (section 3.3). The solution is separated into the following pdf files:

Homework - George Mason University

Solutions 171 The trajectory drawn with an angle of $\theta = 45$ degrees ($|z'| = 1$) and a tacking $f_j \rightarrow -f_j$ at $x = L/2$

has a total length $L\sqrt{2}$ and a velocity greater than $(w_0 - w_l)/2$. The time along this path, $T_v = 2L\sqrt{2}/(w_0 - w_l)$, is obviously shorter than the time along the path with no tacking, $T_{rv} = 2L(z_l/L)/(w_0 - w_l) = 2z_l/(w_0 - w_l)$. In realistic cases, for instance the America's Cup, one can see how

Solutions - CERN

Homer Reid's Solutions to Goldstein Problems: Chapter 19 However, considering the definition of \mathbf{r} , we clearly have $x^2 + y^2 = \cos^2 \theta = 2 \cdot 1/2 b^2 (x^2 + y^2)$ because the magnitude of the distance between r_1 and r_2 is constrained to be b by the rigid axis.

Solutions to Problems in Goldstein, Classical Mechanics ...

thus, $[x_i, p_j] = 0$ $[p_i, p_j] = 0$ Goldstein, Ch.9, 34 Obtain the motion in time of a linear harmonic oscillator by means of the formal solution for the Poisson bracket version of the equation of motion as derived from Eq.(9.116). Assume that at time $t = 0$ the initial values are x_0 and p_0 .
