Guide To Rubber And Plastics Test
Equipment

Minnesota Rubber and Plastics' custom-molding capabilities encompass all three processes – transfer, compression and injection molding. We select from among these methods based on a number of key factors, including: the size and shape of the part, the hardness, flow and cost of the material, and the anticipated number of parts to be produced.

ABG Rubber & Plastics - Leading stockholders and processors of

industrial rubber and plastics since 1975.

Natural Rubber Natural rubber is a polymer of isoprene. Although natural rubber is not used extensively within industrial applications, due to a number of limitations in its properties and the cost - comparative to other longer-lasting materials such as EPDM - it still has its uses.

Walker Rubber & Plastics Limited
Liquid silicone rubber is used to produce a wide range of parts across various markets, with presence in segments like medical devices, cookware, electronics and personal electronic devices. Silicone polymers exhibit many unique properties that other materials cannot achieve, combining rubbery flexibility with excellent thermal stability, durability, low surface

energy, biocompatibility and soft feel.
