The U.S. capital market doors are now open to foreign entities, but compliance with U.S. filing requirements can prove a complex and burdensome undertaking for a non-U.S. company or legal counsel. The required process includes: navigating a maze of U.S. accounting standards deciphering and following the SEC's exacting financial reporting rules conducting effective audits despite major differences in accounting and auditing standards furnishing an endless supply of financial information accomplishing all this on time and in the proper format U.S. Securities Regulation of Foreign Issuers: Financial Reporting and Disclosure is the definitive guide through the complexities of U.S. SEC filings. This is the first and only reference work to focus exclusively on the unique accounting, financial reporting, and disclosure requirements of foreign entities issuing securities in the United States. Author Allan B. Afterman is a world-renowned authority on SEC accounting, disclosure, and auditing. He presents information in a how-to style, with clear, precise direction on meeting all U.S. filing and reporting requirements. This work provides numerous examples used by non-U.S. companies for practitioners to use as models for their own reporting. These models, its comprehensive coverage, and its straightforward style make this an essential manual for anyone needing to make sense of and comply with U.S. accounting, financial reporting, and disclosure requirements. As the markets in transitional economies open and grow, major challenges and opportunities arise for multinational firms entering these markets, local firms facing these new competitors, and policymakers seeking to increase the ability of all firms to compete fairly and efficiently. Yet despite the important questions transition economies pose for policymakers and companies seeking to enter and compete in these new markets, there has been a relative absence of systematic research on these concerns. This book seeks to fill a gap in the existing literature by offering a pioneering and comprehensive examination of issues that have developed as markets in transitional economies become more deregulated and open. The countries discussed include China, the Czech Republic, Hungary, India, Poland, Romania, Russia, South Africa and South Korea. The topics covered are divided into five main sections, and the individual chapters are written by some of the world's leading academic experts on these issues. Most of the authors draw from freshly-collected data in new studies of consumers and/or firms in transitional economies. After an opening section which discusses the marketing issues and challenges multinational and local firms face in transitional economies, the next three sections offer detailed treatments of changing consumer behavior, measuring and improving the marketing orientation of firms, and implementing and managing distribution channels. The fifth and final section is devoted to firm strategies and tactics, examined variously from the perspective of multinational firms entering these new markets, from the viewpoint of existing local firms facing new competitive challenges from global entrants, and from the perspective of local firms seeking to establish themselves in foreign markets where they have not previously competed. Most of the individual chapters are revised versions of papers originally presented at a conference sponsored by the William Davidson Institute, which focuses on research related to emerging and transitional economies, and have not previously appeared in published form. Thus, the book is a unique collection of cutting-edge scholarship on the various aspects of marketing in transitional economies. It will prove valuable reading to academics, policymakers, and international business strategists.

“ A good read for anyone who wants to understand what actually determines whether a developing economy will succeed ” (Bill Gates, “ Top 5 Books of the Year ”). An Economist Best Book of the Year from a reporter who has spent two decades in the region, and who The Financial Times said “ should be named chief myth-buster for Asian business. ” In How Asia Works, Joe Studwell distills his extensive research into the economies of nine countries—Japan, South Korea, Taiwan, Indonesia, Malaysia, Thailand, the Philippines, Vietnam, and China—into an accessible, readable narrative that debunks Western misconceptions, shows what really happened in Asia and why, and for once makes clear why some countries have boomed while others have languished. Studwell ’ s in-depth analysis focuses on three main areas: land policy, manufacturing, and finance. Land reform has been essential to the success of Asian economies, giving a kick-start to development by utilizing a large workforce and providing capital for growth. With manufacturing, industrial development alone is not sufficient, Studwell argues. Instead, countries need “ export discipline, ” a government that forces companies to compete on the global scale. And in finance, effective regulation is essential for fostering, and sustaining growth. To explore all of these subjects, Studwell journeys far and wide, drawing on fascinating examples from a Philippine sugar baron ’ s stifling of reform to the explosive growth at a Korean steel mill. “ Provocative . . . How Asia Works is a striking and enlightening book . . . A lively mix of scholarship, reporting and polemic. ” —The Economist

This handbook focuses on two sides of the lean production debate that rarely interact. On the one hand, management and industrial engineering scholars have presented a positive view of lean production as the epitome of efficiency and quality. On the other hand, sociology, industrial relations, and labor relations scholars focus on work speedups, management by stress, trade union positions, and self-exploitation in lean teams. The editors of this volume understand the merits of both views and present them accordingly, bridging the gaps among five disciplines and presenting the best of each perspective. Chapters by internationally acclaimed authors examine the positive, negative and neutral possible effects of lean, providing a global view of lean production while adjusting lean to the cultural and political contexts of different nation-states. As the first multi-lens view of lean production from academic and consultant perspectives, this volume charts a way forward in the world of work and management in our global economy.

It tracks transaction costs to enable a scientific approach instead of a widely used "state-of-the-art" approach, working to bridge the gap between theory and practice.
