CPR Neonatal Resuscitation by Dr. Chandrakala Pediatric CPR Infant Cpr Guidelines
Open the child's airway by placing 1 hand on their forehead and gently tilting their head back
and lifting the chin. Remove any visible obstructions from the mouth and nose. Pinch their
nose. Seal your mouth over their mouth, and blow steadily and firmly into their mouth,
checking that their chest rises. Give 5 initial rescue breaths.

~~First aid CPR NHS~~

For infants, use your mouth to make a complete seal over the infant's mouth and nose, then
blow in for one second to make the chest clearly rise. Now, deliver two rescue breaths. Begin
CPR. If the child or baby is unresponsive to the rescue breaths, begin CPR.

~~Cardiopulmonary Resuscitation (CPR) In Children~~

Resuscitation Council UK Guidelines 2015 state “ If you are untrained or unable to do rescue breaths, give chest compression-only CPR (i.e. continuous compressions at a rate of at least 100 – 120 min⁻¹) ” . Because of the heightened awareness of the possibility that the victim may have COVID-19, Resuscitation Council UK offers this advice:

~~Resuscitation Council UK Statement on COVID-19 in relation ...~~

Four observational studies, published after the 2010 Guidelines, suggest that a compression depth range of 4.5 – 5.5 cm in adults leads to better outcomes than all other compression depths during manual CPR. 35-38 Resuscitation Council UK endorses the ILCOR recommendation that it is reasonable to aim for a chest compression depth of approximately

5 cm but not more than 6 cm in the average ...

~~Guidelines: Adult basic life support and automated ...~~

The guidelines contain detailed information about basic and advanced life support for adults, paediatrics and newborns, as well as information on the use of Automated External Defibrillators and other topics. The most recent set of RCUK guidelines were released in 2015.

~~2015 Resuscitation Guidelines | Resuscitation Council UK~~

Cardiopulmonary resuscitation (CPR) teaching for parents before an infant 's hospital discharge is the usual practice in many neonatal intensive care units. A thorough literature review was conducted to ascertain whether teaching infant resuscitation to parents of neonates about to be discharged decreases mortality and morbidity rates.

~~Teaching parents infant resuscitation~~

If using an AED for a child of less than 8 years, deliver a paediatric-attenuated adult shock energy. If using an AED for a child over 8 years, use the adult shock energy. Resume CPR: Without reassessing the rhythm or feeling for a pulse, resume CPR immediately, starting with chest compression. Consider and correct reversible causes (4Hs and 4Ts).

~~Guidelines: Paediatric advanced life support ...~~

CPR & First Aid - Child CPR By the American Heart Association's® guidelines Child CPR is administered to victim under the age of 8. Children have a much better chance of survival if CPR is performed immediately.
