Mule ESB 3.3.1 Release Notes | MuleSoft Documentation

Mule ESB 3.2.1 Release Notes | MuleSoft Documentation

In Mule 3, components that returned multiple payloads, used a special structure called the MuleMessageCollection. In Mule 4, any component that needs to deal with multiple messages can simply set the payload of the message to a List of Mule Messages. You can then iterate over these messages using DataWeave, For Each, or other components.

Mule ESB 3.1.1 Release Notes | MuleSoft Documentation

ing Mule Esb 3 Mulesoft

Mule, the runtime engine of Anypoint Platform, is a lightweight Java-based enterprise service bus (ESB) and integration platform that allows developers to connect applications together quickly and easily, enabling them to exchange data. It enables easy integration of existing systems, regardless of the different technologies that the applications use, including JMS, Web Services, JDBC, HTTP, and more.

What is Mule ESB? | MuleSoft

Mule ESB 3.3's new method of configuring the Mule Security Manager may, therefore, be incompatible with your existing Mule ESB 3.x applications. To ensure that your Mule ESB 3.x application functions properly in Mule ESB 3.3, add a <cxm:mule-security-manager> child element within the <cxm:ws-security> element of your Web service flow.

Mule ESB 3.3.0 Release Notes | MuleSoft Documentation

An ESB for the modern enterprise. When deployed as an ESB, the Mule runtime engine of Anypoint Platform combines the power of data and application integration across legacy systems and SaaS applications, with a seamless path to the other capabilities of Anypoint Platform and the full power of API-led connectivity.

Mule ESB | Enterprise Service Bus | Open Source ESB | MuleSoft

Mule ESB 3.1.1 Release Notes The Mule team is pleased to announce the availability of Mule ESB 3.1.1. This is a follow-up release to Mule ESB 3.1 , which continues MuleSoft's commitment to making Mule the industry's most powerful, simplest to use, and up-to-date Open Source ESB.

Mule ESB 3.1.1 Release Notes | MuleSoft Documentation

MuleSoft is pleased to announce the release of Mule ESB 3.3.1 which offers improvements and stabilization to Mule Studio and the Mule Devkit. These release notes apply to both the Enterprise Edition and the Community Edition of Mule ESB 3.3.1.

Mule ESB 3.3.1 Release Notes | MuleSoft Documentation

Mule ESB 3.2.1 Release Notes The Mule team is proud to announce the availability of Mule ESB 3.2.1. This is a follow-up release to Mule ESB 3.2.0 , which continues MuleSoft's commitment to making Mule the industry's most powerful, complete, and up-to-date enterprise ESB solution.

Mule ESB 3.2.1 Release Notes | MuleSoft Documentation

MuleSoft's Anypoint Platform™ is a unified, single solution for iPaaS and full lifecycle API management. Anypoint Platform, including CloudHub™ and Mule ESB™, is built on proven open-source software for fast and reliable on-premises and cloud integration without vendor lock-in.

Mule Runtime 3.9.0 Release Notes | MuleSoft Documentation

Mule ESB 3.7.0 is supported from Anypoint Studio June 2015 Release and onwards. Older Mule ESB runtimes can also be installed in the new Anypoint Studio release. APIkit 1.5.1 only works in runtimes whose versions are less than 3.6.0. APIkit 1.6.0 works in the 3.6.0 runtime and above (see STUDIO-5955 below). Java 7 is required for Anypoint Studio. If you are deploying to Java 6 runtimes, you can continue to configure Java 6 as the Java runtime for your project.

Anypoint Studio June 2015 with 3.7.0 ... - docs.mulesoft.com

dispose public void dispose() Description copied from interface: Disposable A lifecycle method where implementor should free up any resources. If an exception is thrown it should just be logged and processing should continue.
