"The second edition of Modern Corporate Finance: Theory and Practice combines a forward-looking vision of corporate finance with the tried and true practices of the past. This text emphasizes the modernist movement in finance, which is based on systematic methodology with an emphasis on deductive reasoning and empirical validation. The modernist movement produces a market-value-based approach to finance that emphasizes shareholder wealth maximization, options, and agency relationships. This movement has expanded without question, the frontiers of knowledge in finance. Until Modern Corporate Finance: Theory and Practice, instructors have lacked a framework from which to teach these concepts at the introductory level."--BOOK JACKET. "A crusading legal scholar exposes the powerful psychological forces that undermine our criminal justice system--and affect us all Our nation is founded on the notion that the law is impartial, that legal cases are won or lost on the basis of evidence, careful reasoning and nuanced argument. But they may, in fact, turn on the temperature of the courtroom, the camera angle of a defendant's taped confession, or a simple word choice or gesture during a cross-examination. In Unfair, law professor Adam Benforado shines a light on this troubling new research, showing, for example, that people with certain facial features receive longer sentences and that judges are far more likely to grant parole first thing in the morning. In fact, over the last two decades, psychologists and neuroscientists have uncovered many cognitive forces that operate beyond our conscious awareness--and Benforado argues that until we address these hidden biases head-on, the social inequality we see now will only widen, as powerful players and institutions find ways to exploit the weaknesses in our legal system. Weaving together historical examples, scientific studies, and compelling court cases--from the border collie put on trial in Kentucky to the five teenagers who falsely confessed in the Central Park Jogger case--Benforado shows how our judicial processes fail to uphold our values and protect society's weakest members, convicting the innocent while letting dangerous criminals go free. With clarity and passion, he lays out the scope of the problem and proposes a wealth of reforms that could prevent injustice and help us achieve true fairness and equality before the law"--

It is estimated that the functionally significant body of knowledge for a given medical specialty changes radically every 8 years. New specialties and "sub-specialization" are occurring at approximately an equal rate. Historically, established journals have not been able either to absorb this increase in publishable material or to extend their readership to the new specialists. International and national meetings, symposia and seminars, workshops, and newsletters successfully bring to the attention of physicians within developing specialties what is occurring, but generally only in demonstration form without providing historical perspective, pathoanatomical correlates, or extensive discussion. Page and time limitations oblige the authors to present only the essence of their material. Pediatric neurosurgery is an example of a specialty that has developed during the past 15 years. Over this period neurosurgeons have obtained special training in pediatric neurosurgery and then dedicated themselves primarily to its practice. Centers, Chairs, and educational programs have been established as groups of neuro in different countries throughout the world organized surgeons themselves respectively into national and international societies for pediatric neurosurgery. These events were both preceded and followed by specialized courses, national and international journals, and ever-increasing clinical and investigative studies into all aspects of surgically treatable diseases of the child's nervous system.

"Interpreting Economic and Social Data" aims at rehabilitating the descriptive function of socio-economic statistics, bridging the gap between today's statistical theory on one hand, and econometric and mathematical models of society on the other. It does this by offering a deeper understanding of data and methods with surprising insights, the result of the author's six decades of teaching, consulting and involvement in statistical surveys. The author challenges many preconceptions about aggregation, time series, index numbers, frequency distributions, regression analysis and probability, nudging statistical theory in a different direction. "Interpreting Economic and Social Data" also links statistics with other quantitative fields like accounting and geography. This book is aimed at students and professors in business, economics demographic and social science courses, and in general, at users of socio-economic data, requiring only an acquaintance with elementary statistical theory.
