Students in countries such as Finland, South Korea, and Singapore continue to outperform their peers in America. But that hasn't stopped the United States government from spending more money on education as achievement plummets. Dr. Vicky Wells, a former school principal, explores what's going on at the federal, state, and local levels so that members of the public can hold bureaucrats accountable. In a series of reality checks, she explains how to • meet the growing crisis head on; • equip students with the necessary skills upon graduation; • make decisions based upon the input of real-life educators; and • ignore politics in order to best serve students. Teachers and parents trust leaders to make decisions based on what's best for the students. Even so, all too often, decision making seems to be more about politics and quid pro quo—and this does not best serve students, educators, or the community. The educational system continues to decline, and students keep dropping out or graduating without the knowledge they need to succeed. It's time to stop constantly changing curriculum and start focusing on the real problems confronting teachers and students.

Have you ever been asked a tough question about religion and didn't have a good answer ready? You knew there probably was a good answer, but you didn't know what it was. Well, here are the answers you have been looking for to some of the most difficult religious and moral questions of the day. Not only are these replies clear and concise, but they contain hundreds of quotations from the bible, authoritative Church documents, and many other reliable and persuasive sources.

A strong and fluent competency in mathematics is a necessary condition for scientific, technological and economic progress. However, it is widely recognized that problem solving, reasoning, and thinking processes are critical areas in which students' performance lags far behind what should be expected and desired. Mathematics is indeed an important subject, but is also important to be able to use it in extra-mathematical contexts. Thinking strictly in terms of mathematics or thinking in terms of its relations with the real world involve quite different processes and issues. This book includes the revised papers presented at the NATO ARW "Information Technology and Mathematical Problem Solving Research", held in April 1991, in Viana do Castelo, Portugal, which focused on the implications of computerized learning environments and cognitive psychology research for these mathematical activities. In recent years, several committees, professional associations, and distinguished individuals throughout the world have put forward proposals to renew mathematics curricula, all emphasizing the importance of problem solving. In order to be successful, these reforming intentions require a theory-driven research base. But mathematics problem solving may be considered a "chaotic field" in which progress has been quite slow.

"All About Pigs & Pig-Keeping" contains almost all the information one might want to know about pigs and related subjects. Presented as a series of over 800 questions and answers split into helpful sections, this volume is sure to be of utility to farmers and pig owners alike. Contents Include: "Breeding", "Breeding for Bacon", "Sow's Breeding Life", "Feeding", "Animal Protein", "Antibiotics", "Artificial Rearing", "Housing", "Equipment", "Fattening", "Houses", "Management", "Bad Habits", "Crops and Cropping", "Ear Marking and Ringing", "Veterinary Abnormalities", "Abnormal Behaviour", "Abortion", "Boar Troubles", etc. Many vintage books such as this are increasingly scarce and expensive.
