this project

*Page 2/100*

and something  
as humble as  
even a  
Raspberry Pi  
Zero W is more  
than enough to  
handle this.  
The plan was to  
use the PI's  
GPIO pins to  
drive a relay  
board which in  
turn could

control the  
Pump.  
With the  
default  
bootloader in  
Raspberry Pi's  
popular  
Raspbian  
distribution,  
DTC can be set  
in the  
configuration  
file

(config.txt) on the FAT partition of a bootable microSD card using the keyword device\_tree=. Since 2014, the Raspberry Pi's pin header has been extended to 40 pins.

Pins 27 and 28  
are dedicated  
for a secondary  
I 2 C bus.

Wait 5 seconds  
(or when you  
see the tiny  
green light on  
the Raspberry  
Pi is no longer  
illuminated),  
and unplug your

Raspberry Pi  
from the wall.  
Now, turn on  
the 4xAA  
battery holder.  
Connect the  
Raspberry Pi  
battery pack to  
the Raspberry  
Pi. Place the  
robot on a  
smooth floor in  
a wide open

flat space,  
away from any  
object.

## How to Make a Remote Controlled Robot Using Raspberry Pi

...

```
sudo nano  
/etc/rc.local.  
Add the
```

*Page 22/100*

following lines  
below the file:  
#RPI Rover  
sleep 2 /home/p  
i/rover/stream.  
sh & /home/pi/r  
over/init.sh.  
This will run  
stream.sh and  
init.sh when  
the RPi boots  
up. All the  
needed shell

scripts, as well as the webpages, are found on my Raspberry Pi rover robot repository.

*Page 24/100*

Servo Motor  
Control using  
PWM with  
Raspberry Pi.  
Servos are  
controlled  
using a Pulse-  
Width  
Modulation  
(PWM) signal  
from the  
Raspberry Pi.  
PWM is a type

of digital  
signal that  
allows us to  
control devices  
in an analog  
fashion. PWM  
varies the  
amount of time  
a signal is  
HIGH or LOW.

logic Here,  
HIGH means a 5V  
signal or  
digital 1, and  
LOW is a 0V  
signal or  
digital 0. For

*Page 38/100*

example,  
GPIO.output  
(5,1) – this  
command sends a  
HIGH signal  
(digital 1) to  
pin no 5 on the  
Raspberry Pi.  
Thus, each  
motor's  
direction can  
be controlled  
by writing

HIGH/LOW  
signals through  
two GPIO pins  
from the  
Raspberry Pi.
