Dairy, milk processing plant, automated dairy plant

Milk is collected from the farm every 24 or 48 hours. The tankers that are used have special stainless steel bodies which are heavily insulated to keep the milk cold during transportation to the processing factory. Milk tanker drivers are accredited milk graders, qualified to evaluate the milk prior to collection.

How Milk Gets from the Cow to the Store - Milk - ProCon.org

Processing at temperatures conducive to the partial solidification of milk fat (i.e. below 40 ° C) results in incomplete dispersion of the fat phase. Products of high fat content are more difficult to homogenize and also more likely to show evidence of fat clumping, because the concentration of serum proteins is low in relation to the fat content.

Homogenizers | Dairy Processing Handbook

MILK The raw material, milk, can be from different species: cow (for cow cheese), buffalo (for buffalo cheese), sheep (for sheep cheese), goat (for goat cheese), or it can be a mixture of milks from more than one species (in this case we speak of mixed milk cheese). MILK PREPARATION Not all technologies include this phase. The milk is treated ...

MANUAL ON THE PRODUCTION

Within the dairy industry, four different membrane filtration processes are used: microfiltration (MF), ultrafiltration (UF), nanofiltration (NF), and reverse osmosis (RO). The figure illustrates which milk and whey components can be concentrated by means of each process, depending on the density of the membrane. Reverse osmosis (RO)

Filtration processes for dairy process

The Low Input – Low Impact (LiLi) system allows dairy food producers of all sizes to offer safe and delicious, farm-fresh milk as well as various dairy products to their customers. The LiLi completely pasteurizes without homogenizing, separating or standardizing milk, maintaining its nutritional value and deliciously fresh flavor.

Milk Processing Equipment - Bob-White Systems

Milk is picked up by a handler who takes a sample and then pumps the milk from farm's bulk tank into the milk truck. A handler may pick up milk from more than one farm, so a truck load may contain milk from several farms when it is delivered to the processing plant.
