

Manual Performance Testing

[10 BEST Performance Testing Tools | Load Testing Tools \(2020\)](#)

[How to Perform Manual Performance Testing?](#)

Performance Testing checks the speed, response time, reliability, resource usage, scalability of a software program under their expected workload. The purpose of Performance Testing is not to find functional defects but to eliminate performance bottlenecks in the software or device.

As the name suggests, Manual testing is the one in which application testing happens manually. The test cases/scenarios are executed one by one by Testers (professional involved in software testing) manually without using any readymade tools, and then the results are verified.
