The Sky Hook line of industrial lifting equipment fills the gap between the simple chain hoist and massive overhead or portable gantry crane. With many companies implementing mandates restricting individual lift limitations to 35 lbs., Sky Hooks fill the need as small, ergonomic, manual lifting equipment that's portable and easy to use.

The Sky Hook is a small crane style hoist lift designed as a portable, safe, high quality lifting solution. Standard models offer a wide range of base options to accommodate a variety of needs; however, there are many applications in the industry which require lifting equipment of different dimensions and capabilities.
